NASA STI Program ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program plays a key part in helping NASA maintain this important role.

The NASA STI Program provides access to the NASA STI Database, the largest collection of aeronautical and space science in the world. The STI Program is also NASA's institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- TECHNICAL PUBLICATION. Reports of completed research or major significant phases of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed of continuing reference value. NASA counterpart of peer-reviewed formal professional papers, but has less stringent limitations on manuscript length and extent of graphic presentations.
- TECHNICAL MEMORANDUM. Scientific and technical findings that are of preliminary or specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.
- CONFERENCE PUBLICATION. Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or co-sponsored by NASA.
- SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and missions, often concerned with subjects having substantial public interest.
- TECHNICAL TRANSLATION. English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services that help round out the STI Program's diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results ... even providing videos.

The NASA STI Program is managed by the NASA STI Program Office (STIPO). STIPO is the administrative office at Langley Research Center for the NASA STI Program.

For more information about the NASA STI Program, you can:

- Access the NASA STI Program Home Page at *http://www.sti.nasa.gov*
- E-mail your question via the Internet to *help@sti.nasa.gov*
- Fax your question to the NASA STI Help Desk at (301) 621-0134
- Telephone the NASA STI Help Desk at (301) 621-0390
- Write to:

Introduction

This issue of the *NASA Video Catalog* cites video productions listed in the NASA STI Database.

The videos listed have been developed by the NASA centers, covering Shuttle mission press conferences; fly-bys of planets; aircraft design, testing and performance; environmental pollution; lunar and planetary exploration; and many other categories related to manned and unmanned space exploration.

Each entry in the publication consists of a standard bibliographic citation accompanied by an abstract. The Table of Contents shows how the entries are arranged by divisions and categories according to the *NASA Scope and Coverage Category Guide*.

For users with specific information, a Title Index is available. A Subject Term Index, based on the *NASA Thesaurus*, is also included.

Guidelines for usage of NASA audio/visual material, ordering information, and order forms are also available.

Use of NASA Photography and Audio/Visual Recordings

General Conditions

NASA material may not be used to state or imply the endorsement by NASA or by any NASA employee of a commercial product, service or activity, or used in any other manner that might mislead.

NASA should be acknowledged as the source of its material.

It is unlawful to falsely claim copyright or other rights in NASA material.

NASA shall in no way be liable for any costs, expenses, claims or demands arising out of use of NASA's cassettes and photographs by a recipient or a recipient's distributees.

NASA personnel are not authorized to sign indemnity or hold harmless statements, releases from copyright infringement, or documents granting exclusive use rights.

Photography

Photographs are not protected by copyright unless noted. If copyrighted, permission should be obtained from the copyright owner prior to use. If not copyrighted, photographs may be reproduced and distributed without further permission from NASA. If a recognizable person appears in a photograph, use for commercial purposes may infringe on a right of privacy or publicity and permission should be obtained from the recognizable person.

Audio Recordings

Audiotape recordings are not protected by copyright unless noted. A cassette may be reproduced and distributed, without further permission from NASA. However, use of a portion or segment of an audiotape, such as talent, narration or music, may infringe on a right of publicity of copyright, and permission should be obtained from the source.

Video and Motion Picture Recordings

Videotape and motion picture recordings are not protected by copyright unless noted. A recording may be reproduced and distributed, without further permission from NASA. Copyrighted music or footage, which is incorporated in a production, may not be used unless permission is obtained from the copyright owner. While in most instances using non–copyrighted segments is permitted, use for a commercial purpose of a portion or segment containing talent or a recognizable person may infringe on a right of publicity and permission should be obtained from the talent or recognizable person. These guidelines also apply to NASA's "live television" satellite broadcasts.

Please Read These Instructions Carefully Before Completing Form

ORDERING INSTRUCTIONS

Customer Name and Address

Please give your name, organization, phone number, fax number, and complete shipping address including number and street.

Videotape Standards

All videos are distributed in the U.S. Standard, NTSC. To receive videos in a broadcast standard outside of the United States (PAL or SECAM), please contact the NASA STI Help Desk by phone at (301) 621-0390 for foreign standards pricing.

Formats

All videos are formatted in VHS and Betacam SP. Other formats available include SVHS, Hi8, and PAL for foreign users. Special handling, however, will result in an increased cost to the requester. Please contact the NASA STI Help Desk by phone at (301) 621-0390 for special format requests.

Videos Requested

Please list each quantity, accession number, title, and playing time requested on a separate line. Please include the full title since many of the videos have similar titles. If you are requesting more than six titles, please use an additional form.

Video Program Allocation

Video titles are purchased separately. You may receive each title on a separate videotape, or you may request that several titles ordered go on a single video cassette, if space allows.

Method of Payment

Payment should be made at time of order by check, credit card, or Customer ID number.

Processing

Standard service means that most video requests are processed in-house within three business days, then shipped. Rush service is also available for an additional fee, whereby orders are processed within one business day, then shipped.

Shipping

A standard shipping and handling fee of $2.00 for U.S. addresses and $17.00 for international addresses is charged for each item. Standard shipping is through the USPS Priority Mail service with delivery expected within 2–3 days to most U.S. destinations and 4–7 days to most international destiantions. USPS Express Mail service is available for $13.00 per item within the U.S. only. Express Mail service provides 1-day delivery to most destinations.

A Publication of the National Aeronautics and Space Administration

JULY 2004

01
AERONAUTICS (GENERAL)

Includes general research topics related to manned and unmanned aircraft and the problems of flight within the Earth's atmosphere. Also includes manufacturing, maintenance, and repair of aircraft. For specific topics in aeronautics, see *categories 02 through 09*. For information related to space vehicles *see 12 Astronautics*.

19940029066 NASA Lewis Research Center, Cleveland, OH, USA

NACA fire crash research

JAN 1, 1992; In English

Report No(s): NASA-TM-109794; NONP-NASA-VT-94-12922; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This video provides a better understanding of the important factors involved in the start and spread of crash fires, as a necessary first step leading to significant reduction in the crash fire hazards.

CASI

Accidents; Crashes; Fires; Flight Safety

19950004297 NASA Hugh L. Dryden Flight Research Center, Edwards, CA, USA

Dryden and transonic research

May 27, 1992; In English; 20th Anniversary F-8 Digital Fly-By-Wire (DFBW) and Supercritical Wing (SCW) Symposium, 1995

Report No(s): NASA-TM-104281; NONP-NASA-VT-94-23629; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This video on transonic research is given by Dryden engineer Ed Saltzman as part of the 20th Anniversary F-8 Digital Fly-By-Wire (DFBW) and Supercritical Wing (SCW) Symposium.

DFRC

F-8 Aircraft; Fly By Wire Control; Research; Supercritical Wings; Transonic Flow

19950004337 NASA Hugh L. Dryden Flight Research Center, Edwards, CA, USA

NACA/NASA: X-1 through X-31

Apr 4, 1994; In English

Report No(s): NASA-TM-104304; NONP-NASA-VT-94-23649; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This video presents clips (in-flight, ground crew, pilots, etc.) of almost everything from X-1 through X-31.

DFRC

Research Aircraft; Research Projects

02
AERODYNAMICS

Includes aerodynamics of flight vehicles, test bodies, airframe components and combinations, wings, and control surfaces. Also includes aerodynamics of rotors, stators, fans, and other elements of turbomachinery. For related information see also *34 Fluid Mechanics and Thermodynamics*.

19940009148 NASA Lewis Research Center, Cleveland, OH, USA

A future view of computational science in aircraft

Aug 1, 1989; In English

Report No(s): LERC-CV-108; NASA-TM-109284; NONP-NASA-VT-93-185300; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The accomplishments of LeRC in the field of computational fluid dynamics are presented.

Author (revised)

Aircraft Design; Computational Fluid Dynamics; Research Facilities

19940009159 NASA Langley Research Center, Hampton, VA, USA

HL-20 personnel launch system

Sep 1, 1990; In English

Report No(s): LARC-HL20-PLS; NASA-TM-109292; NONP-NASA-VT-93-185307; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

An overview of lifting body research to include LaRC's full scale engineering research model is presented.

Author (revised)

Launchers; Lifting Bodies; Lifting Reentry Vehicles; Spacecraft Launching; Spacecraft Models

19940014491 NASA, Washington, DC, USA
Airflow research
Dec 1, 1985; In English
Report No(s): ASR-239; NASA-TM-109372; NONP-NASA-VT-94-198219; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This is an overview of research being done in laminar flow at Ames Dryden Flight Research Center and Langley Research Center. Airflow research at Ames Dryden has resulted in a special wing covering that will artificially induce laminar flow on the wing surface; this specially adapted wing is shown being tested in different flying conditions. This video also features research done at Langley in producing a chemical covering for wings that will make visible natural laminar flow and turbulent airflow patterns as they occur. Langley researchers explain possible use of this technology in supersonic flight.
CASI
Air Flow; Coatings; Flow Visualization; Laminar Flow; Wings

19940022658 NASA Langley Research Center, Hampton, VA, USA
Leading-edge vortex-system details obtained on F-106B aircraft using a rotating vapor screen and surface techniques
Lamar, John E.; Brandon, Jay; Stacy, Kathryn; Johnson, Thomas D., Jr.; Severance, Kurt; Childers, Brooks A.; Nov 1, 1993; In English; Videotape supplement to NASA-TP-3374: 14 min., color, sound, VHS
Contract(s)/Grant(s): RTOP 505-59-30-03
Report No(s): NASA-TP-3374-VIDEO-SUPPL; L-0793-127; NAS 1.60:3374-VIDEO-SUPPL; NONP-NASA-SUPPL-VT-94-209775; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

In this video the following sequences are presented: flight-test operational procedures; animation of post-processing key elements; digitization process of flight video tape; extractor procedure demonstration; reconstructor procedure demonstration; reconstructor used to compare flight results from 1985 with those in 1991; enhancer procedure demonstration; and mapping of oil-flow photograph onto surface geometry for comparison with vapor-screen-determined vortex characteristics.
Author
F-106 Aircraft; Flow Visualization; Leading Edges; Vortices

19950004144 NASA, Washington, DC, USA
Scientific balloons
Dec 1, 1991; In English
Report No(s): NASA-TM-109907; NONP-NASA-VT-94-23149; ASR-258; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video discusses how NASA uses large helium-filled balloons to take payloads up 25 miles to the edge of space to gather data. Balloons provide a cost effective approach to reach these heights.
CASI
Balloon Sounding; High Altitude Balloons

19950013580 NASA Hugh L. Dryden Flight Research Center, Edwards, CA, USA
F-16XL interview with Marta Bohn-Meyer
Jul 27, 1992; In English
Report No(s): NASA-TM-110505; NONP-NASA-VT-95-41117; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Marta Bohn-Meyer discusses the cooperative research between Rockwell Industries and NASA research facilities in their effort to optimize and maintain the supersonic laminar flow on the F-16XL aircraft. Research on the airfoil design, chord optimization, introduction of a suction feature to maintain pressure distribution, and CFD, both theoretical and actual phenomena, are discussed. Bohn-Meyer discusses the difference between supersonic and subsonic laminar flow, cross flow, reasons behind using this particular F-16 aircraft for this research, and the future of this ongoing research, including the data base that investigators are building from wind tunnel data and in-flight validation.
DFRC
Aircraft Design; Airfoils; F-16 Aircraft

19970005033 NASA Johnson Space Center, Houston, TX USA
Wind Tunnel Tests of an Inflatable Airplane
Oct. 09, 1996; In English; Videotape: 32 min. playing time, in color, with sound
Report No(s): NASA-TM-111830; L-1642; NONP-NASA-VT-97-1997005936; No Copyright; Avail: CASI; V03, Videotape-VHS

In this video a wind tunnel investigation of aerodynamic and structural deflection characteristics of an inflatable airplane is shown. The film includes scenarios during wind tunnel tests of an inflatable airplane in the Langley Full Scale Tunnel with the main objective of obtaining load factors prior to wing buckle of 4.5 to 5.0 g. The inflation pressure during the test was indicated to be 7.0 psi.
CASI

19940027297 NASA Lewis Research Center, Cleveland, OH, USA
WHIPICE
JAN 1, 1992; In English
Report No(s): LERC-92-175; NASA-TM-109749; NONP-NASA-VT-94-9949; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video documents efforts by NASA Lewis Research Center researchers to improve ice protection for aircraft. A new system of deicing aircraft by allowing a thin sheet of ice to develop, then breaking it into particles, is being examined, particularly to determine the extent of shed ice ingestion by jet engines that results. The process is documented by a high speed imaging system that scans the breakup and flow of the ice particles at 1000 frames per second. This data is then digitized and analyzed using a computer program called WHIPICE, which analyzes grey scale images of the ice particles. Detailed description of the operation of this computer program is provided.
CASI
Aircraft Hazards; Aircraft Icing; Applications Programs (Computers); Deicing; Ice Prevention

Airline safety and economy
JAN 1, 1993; In English
Report No(s): NASA-TM-109811; NONP-NASA-VT-94-12939; ASR-263; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video documents efforts at NASA Langley Research Center to improve safety and economy in aircraft. Featured are the cockpit weather information needs computer system, which relays real time weather information to the pilot, and efforts to improve techniques to detect structural flaws and corrosion, such as the thermal bond inspection system.
CASI
Aircraft Maintenance; Aircraft Safety; Aviation Meteorology; Flight Management Systems; Flight Safety; Inspection

19940029243 NASA Lewis Research Center, Cleveland, OH, USA
Crash impact survival in light planes
JAN 1, 1994; In English
Report No(s): NASA-TM-109799; NONP-NASA-VT-94-12927; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video explains the effects on aircraft and passengers of light plane crashes. The explanation is provided through the use of simulated light planes and dummies.
CASI
Aircraft Accidents; Civil Aviation; Crashes; General Aviation Aircraft; Light Aircraft; Passengers

19950004136 NASA, Washington, DC, USA
The High Speed Research Program
Jun 1, 1993; In English
Report No(s): NASA-TM-109869; NONP-NASA-VT-94-23140; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This video highlights the endeavors of NASA and the USA manufacturers to provide technology that will make air travel to Pacific countries more efficient. This video was shown at the 1993 Paris Airshow.
CASI
Air Transportation; High Speed; Supersonic Transports

19950004325 NASA Hugh L. Dryden Flight Research Center, Edwards, CA, USA

The crash of Flight 232

May 24, 1991; In English

Report No(s): NASA-TM-104279; NONP-NASA-VT-94-23627; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

Captain Al Haynes of United Airlines gives a presentation about the DC-10 he captained that crash landed in Sioux City, Iowa in 1989.

DFRC

Aircraft Accidents; Crash Landing; Dc 10 Aircraft

04
AIRCRAFT COMMUNICATIONS AND NAVIGATION

Includes all modes of communication with and between aircraft; air navigation systems (satellite and ground based); and air traffic control. For related information see also *06 Avionics and Aircraft Instrumentation, 17 Space Communications, Spacecraft Communications, Command and Tracking*, and *32 Communications and Radar*.

19950011932 NASA Ames Research Center, Moffett Field, CA, USA

VSTOL Systems Research Aircraft (VSRA) Harrier

Dec 1, 1994; In English

Report No(s): NASA-TM-110117; NONP-NASA-VT-95-37002; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

NASA's Ames Research Center has developed and is testing a new integrated flight and propulsion control system that will help pilots land aircraft in adverse weather conditions and in small confined ares (such as, on a small ship or flight deck). The system is being tested in the V/STOL (Vertical/Short Takeoff and Landing) Systems research Aircraft (VSRA), which is a modified version of the U.S. Marine Corps's AV-8B Harrier jet fighter, which can take off and land vertically. The new automated flight control system features both head-up and panel-mounted computer displays and also automatically integrates control of the aircraft's thrust and thrust vector control, thereby reducing the pilot's workload and help stabilize the aircraft for landing. Visiting pilots will be encouraged to test the new system and provide formal evaluation flights data and feedback. An actual flight test and the display panel of control system are shown in this video.

An overview of President Bush's Space Exploration Initiative (SEI) and it's three main components, Space Station Freedom, a Permanent Lunar Base, and a Manned Mission to Mars is provided. Computer simulations of the Space Station Freedom and Permanent Lunar Base are shown, and an animated sequence describes a Mars mission where heavy lift vehicle will bring components of a Mars Spacecraft into orbit, where it will be put together by astronauts using a robotic arm.

The Mars spacecraft is shown orbiting Mars and discharging a lander to the surface, carrying human explorers. The video also details the SEI's Outreach Program, designed to garner interest in and ideas for Space Exploration.

This video recounts the Apollo 11 Mission which took ten years of preparation and the work of over a half a million people, culminating in the first manned lunar landing on July 20, 1969. Historical footage is accompanied by a narrated account of the mission. The footage includes preparation for launch, takeoff, stage separation, docking in space the Eagle Lunar Lander, shots of the Earth and Moon from space, Michael Collins orbiting the Moon in the Columbia Orbiter, Edwin Aldrin and Neil Armstrong walking on the Moon, setting up a Solar Wind experiment, collecting lunar samples, shots aboard the U.S.S. Hornet, retrieval of the astronauts after splashdown, and the parade given in honor of the astronauts.

This video, using historical film footage, photography, and computer animation, describes the launch, flight, lunar landing and exploration, and return flight of Apollo 12, one of the manned lunar missions. The astronauts were Charles Conrad, Richard Gordon, and Allen Bean. Thirty-six seconds into the November 14, 1969 launch, the spacecraft was hit by lightning from the thunderstorm surrounding the launch site. In spite of this mishap, the vehicle and astronauts were not harmed and continued with their mission. The Yankee Clipper (command module) docked with the Intrepid (lunar module) and upon reaching the Moon, the Intrepid disconnected during lunar orbit and descended to the Moon's surface to a landing area previously marked by the Surveyor satellite. After lunar surface exploration, soil sample collection, satellite maintenance, and setting up various lunar surface monitoring equipment (a seismometer and two atmospheric monitors), the Intrepid launched back into lunar orbit, docked with the Yankee Clipper, and returned to Earth. There are both B/W and color photography and film footage, which includes the earth launch, lunar orbit, descent and ascent of Intrepid on the Moon, return flight, atmospheric reentry, and recovery on the Earth, and ground to air and space communication is shown.

Shuttle to Space Station. Heart assist implant. Hubble update. X-30 mock-up

Aug 1, 1992; In English

Report No(s): NASA-TM-110837; NONP-NASA-VT-95-63907; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

Shuttle to Space Station, Heart Assist Implant, Hubble Update, and X-30 Mockup are the four parts that are discussed in this video. The first part, Shuttle to Space Station, is focussed on the construction and function of the Space Station Freedom. While part two, Heart Assist Implant, discusses a newly developed electromechanical device that helps to reduce heart attack by using electric shocks. Interviews with the co-inventor and patients are also included. Brief introduction to Hubble Telescope, problem behind its poor image quality (mirror aberration), and the plan to correct this problem are the three issues that are discussed in part three, Hubble Update. The last part, part four, reviews the X-30 Mockup designed by the staff and students of Mississippi State University.

1998 Mars Missions Science Briefing

Nov. 13, 1998; In English; Videotape: 58 min. 30 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999037064; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

NASA executives gathered together for an interview to discuss the 1998 Mars Mission. A simulated overview of the Lander Mission is presented. Also presented are views of pre-launch activities, countdown, and launch of the spacecraft, burnouts of the first, second, and third engines, and the probe separating from the spacecraft. During this mission the Lander performs in situ investigations that address the science theme 'Volatiles and Climate History' on Mars. The purpose of this mission is to study the following: climate; life; water; carbon dioxide; and dust particles.

Space 2000 Symposium

Mar. 24, 1999; In English; Videotape: 7 hours 38 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999053774; No Copyright; Avail: CASI; B07, Videotape-Beta; V07, Videotape-VHS

The purpose of the Space 2000 Symposium is to present the creativity and achievements of key figures of the 20th century. It offers a retrospective discussion on space exploration. It considers the future of the enterprise, and the legacy that will be left for future generations. The symposium includes panel discussions, smaller session meetings with some panelists, exhibits, and displays. The first session entitled 'From Science Fiction to Science Facts' commences after a brief overview of the symposium. The panel discussions include talks on space exploration over many decades, and the missions of the millennium to search for life on Mars. The second session, 'Risks and Rewards of Human Space Exploration,' focuses on the training and health risks that astronauts face on their exploratory mission to space. Session three, 'Messages and Messengers Informing and Inspire Space Exploration and the Public,' focuses on the use of TV medium by educators and actors to inform and inspire a wide variety of audiences with adventures of space exploration. Session four, 'The Legacy of Carl Sagan,' discusses the influences made by Sagan to scientific research and the general public. In session five, 'Space Exploration for a new Generation,' two student speakers and the NASA Administrator Daniel S. Goldin address the group. Session six, 'Destiny or Delusion? -- Humankind's Place in the Cosmos,' ends the symposium with issues of space exploration and some thought provoking questions. Some of these issues and questions are: what will be the societal implications if we discover the origin of the universe, stars, or life; what will be the impact if scientists find clear evidence of life outside the domains of the Earth; should there be limits to what humans can or should learn; and what visionary steps should space-faring people take now for future generations.

Report No(s): NONP-NASA-VT-2000039783; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Live footage shows panelists, Chief Center Systems Division John Muratore, and Acting Chief, Control Center Systems Division, Linda Uljon, giving an overview of the new Mission Control Center. Muratore and Uljon talk about the changes and modernization of the new Center. The panelists mention all the new capabilities of the new Center. They emphasize the Distributed real time command and control environment, the reduction in operation costs, and even the change from coaxial cables to fiber optic cables. Uljon also tells us that the new Control Center will experience its first mission after the launch of STS-70 and its first complete mission (both launching and landing) during STS-71.

Delta XTE Press Briefing

Dec. 08, 1995; In English; Videotape: 30 min. 10 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078611; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Live coverage of the pre-launch Delta X-Ray Timing Explorer (XTE) press briefing is presented. George Diller, NASA Public Affairs, introduces the panel. The panel consists of Floyd Curington, NASA Launch Manager, Kennedy Space Center; David Mitchell, Launch Vehicle Manager, NASA Goddard Space Flight Center; Dale Schulz, Mission Director, XTE Project Manager Goddard Space Flight Center; Dr. Hale Bradt, XTE Principle Investigator, Massachusetts Institute of Technology (MIT); and Joel Tumbiolo, Launch Weather Officer, Department of the Air Force. The launch of the Delta XTE spacecraft atop the Delta 230 expendable launch vehicle is discussed. Once lofted into orbit, the XTE spacecraft will embark on a two-year mission to carry out an in-depth study of x-ray sources in the universe. Floyd Curington gives the lift-off schedule, fueling, and countdown of the spacecraft. David Mitchell discusses the launch sequence and spacecraft separation. Dale Schulz presents viewcharts of the instrument side of the XTE. Dr. Hale will be studying compact stars such as light dwarfs, neutron stars and quasars. Joel Tumbiolo presents the weather forecast for the December 10, 1995 launch. The press briefing ends with a question and answer period.

ATLAS SOHO Presentation, SAEF 2

Aug. 23, 1995; In English; Videotape: 5 min. 30 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078653; KSC95-50856; X9085-262; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

Live footage of the Solar and Heliospheric Observatory (SOHO) Spacecraft located at the Spacecraft Assembly and Encapsulation Facility (SAEF 2) is presented. A representative from the European Space Agency (ESA) SOHO project, and Kenneth Sizemore, Project Manager Goddard Space Flight Center, discuss the objectives of the SOHO mission, which are to provide an understanding of how the sun works and also its interaction with the Earth's environment. SOHO will be positioned between the sun and the Earth and will give the scientist an unobstructed view of the Sun for two years. SOHO will be positioned along with Atlas IIAS which is an Atlas Centaur launch vehicle featuring two solid rocket boosters. Launch is set for November 1995.

XTE Science Briefing from KSCNF

Oct. 06, 1995; In English; Videotape: 42 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078608; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The X-ray Timing Explorer (XTE), launched on Dec. 30, 1995, is a Satellite that observes the fast-moving, high-energy worlds of black holes, neutron stars, x-ray pulsars and bursts of X-rays that light up the sky and then disappear forever. This videotape presents a pre-launch science briefing to the press by a few of the scientist and managers associated with the XTE satellite. The moderator for the press briefing is Jim Sahli, from the Public Affairs Office at Goddard Space Flight Center (GSFC). He introduces Alan Bunner, of the High Energy Astrophysics at NASA Headquarters; Fred Lamb, from the University of Illinois; Richard Mashotzky, X Ray Scientist at GSFC; Rick Rothschild, Principal Investigator from the University of California at San Diego; and Dale Schultz, the XTE project manager at GSFC. Dr. Bunner explains the electromagnetic spectrum, the placement of x-rays and the importance of the XTE observations to a better understanding of the Universe. Dr. Lamb, explains the difference between white dwarfs, neutron stars and black holes, and the type of observations that the XTE will give to a further understanding of these phenomena. Dr. Mashotzky expands the viewpoint to beyond the galaxy, and explains the interests of scientists who hope to use XTE to further study Quasars and Active Galactic Nuclei. Dr.

Rothschild reviews some of the features of XTE, using a diagram to show the features of interest, such as the X ray Telescopes, and the collecting Proportional Counter Array (PCA.) Mr. Schultz presents a videotape tour of the XTE, in which he shows the scientific instruments and the other features of the satellite. In this tour, the source of each of the instruments is noted. Questions from the members of the press are then fielded. Many of the questions are about the cost of the XTE and any problems that are anticipated in regards to the launch.

Delta WIND Mission Science Briefing
Oct. 31, 1994; In English; Videotape: 62 min. 41 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000078324; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The science objectives of the WIND mission are to: 1) provide complete plasma, energetic particle, and magnetic field input for magnetospheric and ionospheric studies; 2) Determine the magnetospheric output to interplanetary space in the up-stream region; 3) Investigate basic plasma processes occurring in the near-Earth solar wind; and 4) Provide baseline ecliptic plane observations to be used in heliospheric latitudes from ULYSSES. The WIND science briefing is presented by George Diller, NASA public affairs; Dr. Robert L. Carovillano, Project Scientist for the Global Geospace Science Initiative, NASA Headquarters; Dr. Mario H. Acuna, Project Scientist for the WIND Project, Goddard Space Flight Center (GSFC); Dr. Keith W. Ogilvie, Principle Investigator, Solar Wind Experiment at GSFC; Dr. Jean Louis Bougeret, Principle Investigator, Radio/Plasma Wave Experiment, Paris; and Dr. Eugeny Mazets, Co-Principle Investigator, Russian Gamma Ray Spectrometer Instrument, St. Pertersburg, Russia. Dr. Carovillano presents a cartoon slide of the Solar Terrestrial System and describes the Sun and the Magnetic field of the Earth. Dr. Acuna also presents a cartoon slide describing GEOTAIL, POLAR, WIND, SOHO, ULYSSES and Cluster which are the various tools used to study the complex solar terrestrial system. Dr. Ogilvie explains four particle and wave instruments on WIND. These instruments will be used to study the contributions and characteristics of plasma and plasma waves that occur in the solar wind. Dr. Bougeret explains the European participation in the WIND mission. He also shows a slide presentation of SOHO and the CLUSTER spacecraft. Dr. Mazets explains the main objective of the Transient Gamma Ray Spectrometer (TGRS) aboard the WIND spacecraft, which is to perform high resolution measurements of Gamma Ray Burst spectra and time histories, with emphasis on the search for line features in the energy spectra. The briefing ends with a question and answer period. See NONP-NASA-VT-2000078325 for additional question and answer footage.

This video shows footage from the symposium 'Looking Back, Looking Forward: Forty Years of US Human Spaceflight' held at the George Washington University on May 8, 2001. John Logsdon, Director of the GWU Space Policy Institute, introduces Daniel Goldin, NASA Administrator, who briefly discusses 'what it has meant to be a spacefaring nation'. A short video gives an overview of the history of spaceflight, including details on the Cold War space race between the US and the Soviet Union, and the first flights in space and to the moon by the US. Charles Murray presents 'Human Space Flight and American Society: The Record So Far' as the keynote speaker. Session 1, 'The Experience of Space Flight', consists of the astronauts Bob Crippen, Charles Walker, Mary Ellen Weber, and T.J. Creamer, who discuss their personal experiences with space flight. Session 2 ('Perspectives on the Past Forty Years of Human Space Flight'), Session 3 ('Perspectives on the Next Forty Years of US Human Spaceflight'), and the presentation 'The International Space Station and the Future of Human Space Flight' can be found on 'Looking Back, Looking Forward: Forty Years of US Human Spaceflight, These are all in Part 1. Part 2 consists of the following presentations: (1) 'The Space Flight Revolution Revisited' by William Sims Bainbridge; (2) 'Mutual Influences: USSR-US Interactions during the Space Race' by Asif Siddiqi; (3) 'Making Human Space Flight as Safe as Possible' by Fred

Gregory; and (4) 'What If? Paths Not Taken' by John Logsdon. Session 3, 'Perspectives on the Next Forty Years of Human Spaceflight', consists of Neil de Grasse Tyson presenting 'Humans or Robots? Choosing Paths of the Frontier of Space Exploration', Robert Zubrin presenting 'Human Space Flight: An Element of American Greatness', Lori Zoloth presenting 'The Ethics of Human Space Flight, and James Garvin presenting 'NASA Faces the Future'. The final presentation is 'The International Space Station and the Future of Human Space Flight' by Bill Readdy, Deputy Associate Administrator fo9r Space Flight, NASA, and William Shepherd, Commander of Expedition 1, International Space Station.

Apollo 10 - 11
2001; In English; Videotape: 57 min. 43 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001089735; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This video gives overviews of the Apollo 10 and Apollo 11 missions to the moon, including footage from the launches and landings of the Command Module Columbia, which is used for both flights. The Apollo 10 crewmembers, Commander Thomas Stafford, Command Module Pilot John Young, and Lunar Module Pilot Eugene Cernan, are seen as they suit-up in preparation for launch and then as they experiment with the microgravity environment on their way to the moon. The moon's surface is seen in detail as the Command Module orbits at an altitude of 69 miles. The Apollo 11 crewmembers, Commander Neil Armstrong, Command Module Pilot Michael Collins, and Lunar Module Pilot Buzz Aldrin, are seen during various training activities, including simulated lunar gravity training, practicing collecting lunar material, and using the moonquake detector. Footage shows the approach and landing of the Lunar Module Eagle on the moon. Armstrong and Aldrin descend to the moon's surface, collect a sample of lunar dust, and erect the American flag. Eagle's liftoff from the moon is seen.

Apollo 13 Facts: Press Conference
Jan. 01, 2001; In English; Videotape: 1 hr. 24 min. playing time, in color, most with sound
Report No(s): NONP-NASA-VT-2001181430; VJSC-1435E; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

Flight Director Gene Krantz gives an overview of the Apollo 13 mission as corrections are made in the power down checklist, passive thermal control, and orbital burns after the spacecraft runs into problems. He then answers questions from the press with the help of Tony England, Bill Peters, and Dick Thorson. Footage then shows newspaper headlines 'We're Not Concerned' and 'Getting Ready to Land' as people watch televisions to see if the astronauts landed safely. The press conference section of this video has sound, the headlines section does not.

Expedition 7 Crew Interview: Ed Lu
April 25, 2003; In English; 15 min. playing time, in color with audio
Report No(s): JSC-1939B; No Copyright; Avail: CASI; V01, Videotape-VHS; B01, Videotape-Beta

Ed Lu of Expedition Seven is seen during a pre-launch interview. He explains why he became interested in space flight. He states that this is a different type of mission and gives

his reaction to the Columbia Space Shuttle tragedy. The handover of Expedition six is explained by Ed Lu. The challenges of this mission are also described by Lu. These challenges include working with a crew member reduction from three to two, and the conservation of clothing and consumables. Ed Lu talks about what it is like to work with commander Yuri Malenchenko in space. Finally, Ed Lu states that he will continue scientific experiments in space on calcium loss in bones.

Expedition 7 Crew Interview: Yuri Malenchenko
April 25, 2003; In English; 14 min., 59 sec, with color and audio
Report No(s): JSC-1939A; No Copyright; Avail: CASI; V01, Videotape-VHS; B01, Videotape-Beta

Cosmonaut Yuri Malenchenko of Expedition Seven is seen during a pre-launch interview. He begins by telling why he wanted to become a cosmonaut. Malenchenko expresses his reaction about the news of the Space Shuttle Columbia accident, and how this mission will be different from other missions. He also expresses the challenges that face Malenchenko and Ed Lu such as the crew reduction from three to two, less supplies and no space shuttle flights. Malenchenko says that he will have to work on a compressed schedule, which will make the mission even more challenging. A description of the handover of Expedition Six is given. Malenchenko and Ed Lu will be cramped in a confined space on the Soyuz Spacecraft for two days before docking, and he talks about this experience. Lastly, Malenchenko gives his thoughts on how it will be to work with Ed Lu in space, and tells of Lu's trustworthiness and reliability as a fellow crew member.

Mars Observer Orbit Insertion Briefing
Aug. 24, 1993; In English; Videotape: 62 min. 24 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000081556; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

Steve Wall is the host of this video entitled, 'Return to the Red Planet'. Live animation of the Mars Observer orbiting Mars is presented. Steve Wall explains the spacecraft insertion maneuver and also explains the purpose for the Mars Observer launch. Live coverage of the Cape Canaveral launch of the Mars Observer is also presented. Suzanne Dodd, Chief of the Mission Planning team describes the burn start and how the spacecraft will be captured by Mars' gravity. Glenn Cunningham, Mars Observer Project Manager, gives background information on the Mars Observer and describes the organizations behind the Mars Observer Spacecraft, such as the Deep Space Network, the Mission Operation Support Office, Science Investigators, the Flight Engineering Office, Operations Office, and the Ground Data System Office. Dr. William Piotrowski, Acting Director, Solar System Exploration Division, NASA, talks about the purpose of the Mars Pathfinder which is to develop the technology and systems for landing small science packages on Mars. Mr. Roger Gibbs, Former Mars Observer Spacecraft Systems Engineer, tells us how the Mars Observer was built and describes the structural elements on the Mars Observer. The 11-month cruise period for the spacecraft is

given by Joseph Beerer, Manager of the Engineering office. The thrust for the Mars Orbit Insertion is described by Ronald Klemetson, Technical Manager, Propulsion Subsystem Jet Propulsion Laboratory (JPL). George Chen, Lead Engineer Attitude and Articulation Subsystem Spacecraft Team, explains the importance of the attitude control engines on the Spacecraft. Marvin Traxler, Manager of Tracking and Data Acquisition, describes how searching for a signal from the Mars Observer works. See NONP-NASA-VT-2000081555 for a continuation of this discussion with Marvin Traxler.

20000080367 NASA Kennedy Space Center, Cocoa Beach, FL USA
Mars Observer Orbit Insertion Briefing
Aug. 24, 1993; In English; Videotape: 56 min. 8 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000081555; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

For the first part of this briefing, see NONP-NASA-VT-2000081556. Marvin Traxler continues his discussion on signal tracking from the Mars Observer. Julie Webster, Lead Engineer, Telecommunications Subsystem, is introduced. She explains how signals coming back from Mars are detected. Dr. Pasquale Esposito talks about flyby orbits and capture orbits. He says that frequencies coming from the spacecraft can determine if the spacecraft has flown by Mars, or if a capture orbit has occurred. Charles Whetsel, System Engineer Spacecraft Team, presents a computer program. He shows where the signal will appear on the computer from the Spacecraft. Suzanne Dodd presents orbit insertion geometry. Dr. Arden Albee, Project Scientist Mars Observer Project, Cal Tech tech, says that Mars is studied to get more data to confirm their hypotheses derived from previous Mars Missions such as the Viking Mars Program and the Mariner Program. Dr. Albee also describes instrumentation on the Mars Observer such as the Ultra Stable Oscillator, Mars Orbiter Laser Altimeter, and Magnetometer. The camera on the spacecraft is similar to a fax machine because it scans one line at a time as the spacecraft orbits Mars. Dr. Michael Malin, Principle Investigator Mars Observer Camera, Malin Space Science Systems, Inc., describe this process.

An overview of the facilities and research being conducted at LeRC's Plumbrook field station is given. The video highlights four main structures and explains their uses. The Space Power Facility is the worlds largest space environment simulation chamber, where spacebound hardware is tested in simulations of the vacuum and extreme heat and cold of the space plasma environment. This facility was used to prepare Atlas 1 rockets to ferry CRRES into orbit; it will also be used to test space nuclear electric power generation systems. The Spacecraft Propulsion Research Facility allows rocket vehicles to be hot fired in a simulated space environment. In the Cryogenic Propellant Tank Facility, researchers are developing technology for storing and transferring liquid hydrogen in space. There is also a Hypersonic Wind Tunnel which can perform flow tests with winds up to Mach 7.

Expedition 7 Crew Training Clip

April 25, 2003; In English; 22 min., 0 sec, with color and audio

Report No(s): JSC-1939; No Copyright; Avail: CASI; V02, Videotape-VHS; B02, Videotape-Beta

This video shows the Expedition 7 crew of the International Space Station (ISS) during various training activities prior to launch. The crew consisted of Commander Yuri Malenchenko and Flight Engineer Ed Lu. At the virtual reality lab, the two astronauts work at a control panel, with Lu operating a joystick and speaking on earphones. Another section of the video shows Lu and Malenchenko inputting data into laptop computers, Lu testing an intercom and a video camera, and Lu using a machine to analyze blood samples from the crew. At the neutral buoyancy lab, the astronauts are helped in suit-up. The attachment of their gloves is shown. The video ends with Lu and Malenchenko lowered into a pool on a platform.

STS-114 Crew Training Clip

[2003]; In English

Report No(s): JSC-1938; No Copyright; Avail: CASI; V03, Videotape-VHS; B03, Videotape-Beta

The crew of Space Shuttle Atlantis on STS-114 is seen conducting several training exercises in preparation for their mission. The crew consists of Commander Eileen Collins, Pilot James Kelly, and Mission Specialists Soichi Noguchi and Stephen Robinson. With them are Yuri Malenchenko, Sergei Moschenko, and Edward Lu, the intended Expedition 7 crew of the International Space Station (ISS). During extravehicular activity (EVA) training in the virtual reality (VR) laboratory, crew members explore the exterior of the ISS, seen on a monitor. Suiting up with VR equipment is also shown. More EVA training takes place in the Neutral Buoyancy Laboratory (NBL). Here the astronauts are suited up for the NBL pool, and lowered into the water on a platform. After a crew photo session, the astronauts are seated in the Motion Base Simulator in their flight suits. The simulator is shown rocking side-to-side. The crew also hears a hands-on explanation of EVA preparations in the ISS airlock, and practices emergency egress from the CCT, a simulator shaped like an orbiter.

Report No(s): NONP-NASA-VT-2000081544; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This NASA Kennedy Space Center (KSC) video presents a Marshall Space Flight Center-Television (MSFC-TV) news release describing the objectives of the Atmospheric Laboratory for Applications in Science-2 (ATLAS-2), which is being flown on STS-56. Dr. Tim Miller (Mission Scientist), Dr. Marsha Torr (Mission Scientist), and Teresa Vanhooser (Mission Manager) explain that the ATLAS-2 mission is being launched to study earth atmospheric interactions with the sun in general and how manmade chemicals and pollution are contributing to ozone depletion in our atmosphere in particular. Seven instruments comprise the core payload. ATLAS-2 is an integral part of the Spacelab contribution to NASA's Mission to Planet Earth and characterizes the chemical and physical components of Earth's middle atmosphere and the solar energy injected in the atmosphere, studies that began on ATLAS-1.

The Atmospheric Laboratory for Applications and Science-2 (ATLAS-2), was designed to collect data on the relationship between the sun's energy output and Earth's middle atmosphere and how these factors affect the ozone layer. The ATLAS-2 flew on the Space Shuttle Discovery's mission SST-56, launched on April 8, 1993. The videotape consists of an animated tour of the instruments that were included as part of the mission. The first half of the tape shows the various instruments, pointing to each in turn and identifying each by the associated initialisms. The instruments identified were: the Atmospheric Trace Molecule Spectroscopy (ATMOS), Millimeter Wave Atmospheric Sounder (MAS), Shuttle Solar Backscatter Ultraviolet/A (SSBUV/A) spectrometer, Solar Spectrum Measurement (SOLSPEC) instrument, Solar Ultraviolet Irradiance Monitor (SUSIM), Active Cavity Radiometer (ACR) and Solar Constant (SOLCON).) The second half of the animation shows the same tour without the pointing or the identification of the instruments.

Live coverage of a pre-launch news conference on the Atlas/Centaur SOHO mission is presented. George Diller, NASA Public Affairs, introduces the panel. Floyd Curington, NASA Launch Manager, Kennedy Space Center, presents countdown activities. Pat Symons, Launch Vehicle Manager, NASA Lewis Research Center, analyzes the time duration from liftoff to spacecraft separation. Fabrizio Felici, SOHO Mission Director European Space Agency (ESA), explains the important features of SOHO, which includes a payload of 650 kilos and 12 major instruments with multisensors. Ken Sizemore, International Solar Terrestrial Physics (ISTP) Project Manager Goddard Space Flight Center (GSFC), talks about the successful international collaboration between the ESA and NASA. Joel Tumbiolo, Launch Weather Officer USA Air Force (USAF, presented the weather forecast. SOHO was launched aboard an Atlas II rocket on November 23, 1995. The news conference ends with a brief question and answer period.

STS-98 Meal - Suit up - Depart O and C - Launch Atlantis On Orbit - Landing - Crew Egress
February 20, 2001; In English; 1 hr., 9 min. playing time, in color, with sound; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

The crewmembers of the STS-98 include: Pilot Mark Polansky, Commander Kenneth Cockrell, and Mission Specialists Robert Curbeam, Thomas Jones, and Marsha Ivins. The astronauts are shown during suitup, departure of the Operations and Check-Out (O&C) Building and Ingress. Also, the launch of the STS-98 Atlantis is presented from various vantage points such as the Shuttle Landing Facility (SLF) Convoy, Beach Tracker, Vehicle Assembly Building (VAB) Roof, Pad-A Perimeter, Tower-1, and Grandstand. Live footage of the docking of Atlantis with the International Space Station (ISS) is shown and the opening of the Atlantis/ISS hatch is also presented. Mission Specialists Robert Curbeam and Thomas Jones are shown performing On Orbit Extravehicular Activities (EVA's) during this mission. A camera view of the undocking of the Space Shuttle Atlantis and the landing of the Space Shuttle Atlantis at the Dryden Flight Research Facility along with flight crew Egress is also presented.

STS-103 Photo-op/Suit-up/Depart O&C/Launch Discovery On-Orbit/Landing/Crew Egress
April 10, 2001; In English; 59 min, with color and sound; No Copyright; Avail: CASI; V03, Videotape-VHS; B03, Videotape-Beta

The crew of the STS-103 space mission are shown as they prepare for launch and landing of the space shuttle discovery. The crew includes: Commander Curtis L. Brown, Pilot Scott J. Kelly, and Mission Specialists: Steven L. Smith, C. Michael Foale, John M. Grunsfeld, Claude Nicollier and Jean-francois Clervoy. Footage of these astronauts during suit-up, Ingress, Egress and Operations and Checkout (O&C) is presented. Live footage of the countdown and launch of the space shuttle discovery is shown from various vantage points such as the Tower 1, Vehicle Assembly Building (VAB), and pad perimeter. Once in orbit, a presentation of Steven Smith, John Grunsfield, Michael Foale and Claude Nicollier performing three spacewalks to repair the HST is shown. The landing of the space shuttle discovery at the Kenndy Space Center is shown.

STS-111/Endeavour/ISS UF2 Pre-Launch Activities: Launch with Playbacks
June 05, 2002; In English; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

This video of the preflight preparations for and launch of Space Shuttle Endeavour on STS-111 begins with a view of Endeavour on the launch pad. Additional launch pad views leading up to liftoff are interspersed with footage from the Firing Room at Kennedy Space Center, the crew's prelaunch activities, and inspection of the crew members in the White Room before boarding Endeavour. The crew is introduced by a narrator during the preflight banquet and suiting up, and a later clip shows them departing to the launch site. The crew consists of Commander Kenneth Cockrell, Pilot Paul Lockhart, Mission Specialists Philippe Perrin and Franklin Chang-Diaz, and the Expedition 5 crew of the International Space Station (ISS) (Commander Valery Korzun and Flight Engineers Peggy Whitsun and Sergei Treschev). The nozzles on Endeavour's Space Shuttle Main Engine (SSME) are swiveled before liftoff, and the launch is shown past the separation of the solid rocket boosters. After a brief clip from the Mission Control Center at Johnson Space Center, the following launch replays are shown: Beach Tracker, VAB, Pad A, Tower 1, UCS-15, Grandstand, Cocoa Beach DOAMS, Playalinda DOAMS, UCS-23, and OTV-070.

This video details plans for Shuttle-C, an unmanned heavy launch vehicle to carry payloads into orbit. Computer animations depict the Shuttle-C, which uses the same recoverable external boosters, external fuel tank and main orbiter engines as the existing Space Shuttles, through liftoff and entry into orbit, where it progressively jettisons the cargo shroud, external fuel tank, and nose shroud. The video also shows computer simulations of a remotely controlled orbital maneuvering vehicle positioning preassembled components of a Space Station and delivering planetary probes and lunar exploration materials to orbit.

This video documents the preparations for Shuttle Flight STS-26 with Shuttle Discovery, NASA's return to manned space flight after the Challenger disaster. Footage and descriptions document such changes to the new Shuttle as new joints, improved insulation, and added O-rings to the solid rocket boosters; new safety hardware and procedures such as parachute and sidewire evacuations during liftoff, and new pressure suits; modified landing gear, brakes, and nose wheel steering, as well as a modified landing runway. Also profiled are the 5 member crew of all veteran Shuttle astronauts, the TDRS 3 Satellite to be released from the cargo bay in orbit, and 11 commercial and student experiments to be performed during the mission.

STS 63 flight day 4 highlights/MIR-Shuttle rendezvous

Feb 5, 1995; In English

Report No(s): NASA-TM-110512; NONP-NASA-VT-95-42156; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

STS 63 Flight, day 4, the MIR-Shuttle rendezvous is highlighted in this video. The six-member team in the Shuttle are introduced and discuss their functions and tests for this day of the flight. There is actual footage of earth from space, of the MIR Space Station, a tour of the Shuttle cockpit, some footage from the MIR of the Space Shuttle, and footage from inside the MIR with the cosmonauts. Mission control communications with the Shuttle, communication between the Shuttle and MIR, and an historic communication between the Shuttle's astronauts and President Bill Clinton are included. President Clinton interviews each of the six-member team and discusses the upcoming space walk by Dr. Bernard Harris, the first black astronaut to walk in space. This video was recorded on February 6, 1995.

STS 63: Post flight presentation

Feb 27, 1995; In English

Report No(s): NASA-TM-110514; NONP-NASA-VT-95-42494; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

At a post flight conference, Captain Jim Wetherbee, of STS Flight 63, introduces each of the other members of the STS 63 crew (Eileen Collins, Pilot; Dr. Bernard Harris, Payload Commander; Dr. Michael Foale, Mission Specialist from England; Dr. Janice Voss, Misssion Specialist; and Colonel Vladimir Titor, Misssion Specialist from Russia. A short biography of each member and a brief description of their assignment during this mission is given. A film was shown that included the preflight suit-up, a view of the launch site, the actual night launch, a tour of the Space Shuttle and several of the experiment areas, several views of earth and the MIR Space Station and cosmonauts, the MIR-Space Shuttle rendezvous, the deployment of the Spartan Ultraviolet Telescope, Foale and Harris's EVA and space walk, the retrieval of Spartan, and the night entry home, including the landing. Several spaceborne experiments were introduced: the radiation monitoring experiment, environment monitoring experiment, solid surface combustion experiment, and protein crystal growth and plant growth experiments. This conference ended with still, color pictures, taken by the astronauts during the entire STS 63 flight, being shown.

Toys in space, 2

Herbert, Dexter, editor; Jun 24, 1993; In English

Report No(s): NASA-TM-110541; NONP-NASA-VT-95-43944; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

In this educational video from the 'Liftoff to Learning' series, astronauts from the STS-54 Mission (Mario Runco, John Casper, Don McMonagle, Susan Helms, and Greg Harbaugh) explain how microgravity and weightlessness in space affects motion by using both mechanical and nonmechanical toys (gravitrons, slinkys, dart boards, magnetic marbles, and others). The gravitational effects on rotation, force, acceleration, magnetism, magnetic fields, center of axis, and velocity are actively demonstrated using these toys through experiments onboard the STS-54 Mission flight as a part of their spaceborne experiment payload.

Endeavor: Now and then

Sep 22, 1992; In English

Report No(s): NASA-TM-110539; NONP-NASA-VT-95-43942; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

In this educational 'Liftoff to Learning' video series, astronauts from STS-49 Space Shuttle Mission (Thomas Akers, Bruce Melnick, Pierre Thuot, Kathy Thorton, Kevin Chilton, and Richard Hieb) compare their mission aboard the Space Shuttle Endeavor and their shuttle with its namesake, the ship 'Endeavor', commanded by Captain James Cook of England in the late 1700's. Using historical paintings, drawings, and computer graphics, Cook's Endeavor is brought to life. Its voyage path, problems, biological experiments, and discoveries are shown and compared to the modern-day Endeavor, its mission and experiments. The Space Shuttle Endeavor was named in 1988, through a nation-wide school contest. It is the fifth Space Shuttle to be built and employs new technology in its design, for example, its drag shoot for shuttle landings. One part of the STS-49 Mission was the retrieval of the Intel satellite.

All systems go!

Sep 2, 1992; In English

Report No(s): NASA-TM-110542; NONP-NASA-VT-95-43945; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

In this educational 'Liftoff to Learning' video series, astronauts from STS-40 Space Shuttle Mission (F. Drew Gaffney, Millie Hughes-Fulford, Rhea Seddon, James Bagia, Bryan O'Connor, Tamara Jernigan, and Sidney Gutierrez) show, using footage and highlights from their mission, how microgravity causes changes in the human body. The STS-40 was a mission of spaceborne experiments concerned with the physiological, biological, and chemical changes that occur in the human body as a result of microgravity. Different experiments are shown and their significance are explained.

Apollo 13: Houston, we've got a problem

Apr 10, 1991; In English

Report No(s): NASA-TM-110551; JSC-548; NONP-NASA-VT-95-44678; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This video contains historical footage of the flight of Apollo-13, the fifth Lunar Mission and the third spacecraft that was to land on the Moon. Apollo-13's launch date was April 11, 1970. On the 13th of April, after docking with the Lunar Module, the astronauts, Jim Lovell, Fred Haise, and Jack Swiggert, discovered that their oxygen tanks had ruptured and ended up entering and returning to Earth in the Lunar Module instead of the Command Module. There is footage of inside module and Mission Control shots, personal commentary by the astronauts concerning the problems as they developed, national news footage and commentary, and a post-flight Presidential Address by President Richard Nixon. Film footage of the approach to the Moon and departing from Earth, and air-to-ground communication with Mission Control is included.

The first day of the STS-71 flight of the Space Shuttle Atlantis is contained in this video. This mission highlights the first U.S. docking with the Mir Space Station. The scope of this part of the STS-71 mission is to drop off and pickup two cosmonauts, and to pickup one American astronaut who has been living aboard the Mir Station for several months. The STS-71 flight crew consists of: Atlantis Mission Specialist Gregory Harbaugh; Ellen Baker, Flight Commander Robert Gibson; Russian cosmonaut Anatoly Solovyen; Vladimir Dezhuroz; Gennady Strekalov; and Dr. Norman Thagard. Flight footage contains prelaunch activities.

The seventh day of the STS-70 Space Shuttle Discovery mission is featured on this video. The astronauts obtained a successful alignment of the Hercules geo-locating camera and evaluated the manual setup procedures for the rotating wall Bioreactor. Specialist Don Thomas activated and deactivated the Microencapsulation in Space experiment, using a device that produces a timed-release of an antibiotic medication in a weightlessness environment. The Discovery crew begins to wrap up their experiments after a week of gathering data, ranging from observations of Earth's surface and atmosphere to biological studies. There are several minutes of Shuttle observations of Earth included.

The mission of STS-42, the first International Microgravity Laboratory (IML-1), is highlighted. The main purpose of this seven-member crews (including Payload specialist Raborto Bondar from Canada and Payload specialist Ulf D. Merbold from Germany) space shuttle was to perform different experiments at microgravity environment. The experiments were focussed on the following two major study areas: (1) life sciences (biorack, biostack, space physiology, mental workload and performance, Microgravity vestibular investigations, etc.); and (2) material sciences (critical point facility, cryostat, fluid experiment system, mercury lodide crystal growth and vapor crystal growth systems). Cargo bay and middeck experiments; earth views (Quebec, Manicougan Reservoir, St. Lawrence River, and Mountain ranges);and orbiter activities are also included.

The flight crew (Blaha, Baker, Low, Adamson, and Lucid) present and discuss their STS-43 Space Shuttle Mission in this press conference video. This mission was the first flight to deploy the Tracking Data and Relay Satellite (TDRS), the primary payload. A large number of secondary payload experiments were performed. The included: several cell tissue growth and enzyme analysis experiments; a Lower Body Negative Pressure Experiment; optic coupling and flame front propagation/combustion physics experiments; The Space Station Heat Pipe Advanced Radiator Experiment (SHARE) for the Space Station; a crystal control device evaluation; a software and hardware systems checkout for the Shuttle; some flight tests of the new orbiter auto-pilot system; some materials tests on polymer membranes; the Zero Gravity physics experiments; and the Space Shuttle Backscatter Ultraviolet Experiment. Earth views included: the Kuwait oil fires; cloud cover; and B/W lightning footage.

In this post-flight overview, the flight crew of the STS-70 mission, Tom Hendricks (Cmd.), Kevin Kregal (Pilot), Major Nancy Currie (MS), Dr. Mary Ellen Weber (MS), and Dr. Don Thomas (MS), discuss their mission and accompanying experiments. Pre-flight, launch, and orbital footage is followed by the in-orbit deployment of the Tracking and Data Relay Satellite (TDRS) and a discussion of the following spaceborne experiments: a microgravity bioreactor experiment to grow 3D body-like tissue; pregnant rat muscular changes in microgravity; embryonic development in microgravity; Shuttle Amateur Radio Experiment (SAREX); terrain surface imagery using the HERCULES camera; and a range of other physiological tests, including an eye and vision test. Views of Earth include: tropical storm Chantal; the Nile River and Red Sea; lightning over Brazil. A three planet view (Earth, Mars, and Venus) was taken right before sunrise. The end footage shows shuttle pre-landing checkout, entry, and landing, along with a slide presentation of the flight.

In this first part of a two part video mission-highlights set, the flight of the STS-48 Space Shuttle Orbiter Discovery is reviewed. The flight crew consisted of: J. O. Creighton (Commander); Ken Reightler (Pilot); Charles 'Sam' Gemar (Mission Specialist); James 'Jim' Buchli (MS); and Mark Brown (MS). Step-by-step pre-launch and sunset launch sequences are shown with accompanying shots inside the Mission Control Center. The primary goal of this mission was the deployment of Upper Atmosphere Research Satellite (UARS). Other (secondary) payloads included: the MidDeck Zero Gravity Experiment (MODE); the Sam/Cream device; the Shuttle Activation Monitor/Cosmic Ray Effects and Activation Monitor Experiment; and the Physiology and Anatomical Rodent Experiment (PARE). Crew activities were shown, along with Earth views (Aurora Borealis (B/W), light from the Kuwait oil fires, lightning over Italy and other areas, polar regions and ice caps, and the USA at night (B/W)). This was the thirteenth flight of the Space Shuttle Discovery. A night landing is shown.

The mission of the STS-47 flight is highlighted in this video. The flight crew consisted of: Cmdr. 'Hoot' Gibson, Pilot Kurt Brown, Payload Cmdr. Jan Davis, Payload Specialist. M. Mohri (Japanese Astronaut), and Mission Specialists Jay Apt and May Jemison. The primary goal of this mission was the set-up and carrying out of experiments in the accompanying Japanese Spacelab (SL-J) in cooperation with the Japanese Space Program. Dr. Mohri is the first professional Japanese astronaut to fly in space. Vice President Dan Quayle and his wife are shown addressing the astronauts of the Space Shuttle Endeavour with a small pre-launch speech. On this flight many different physical, physiological, and biological spaceborne experiments were performed. These experiments included: a gas evaporation in low gravity environment experiment; a brainwave signals from carp experiment; several human eye movement and visual physiological tests; various physiological tests on a variety of insects and frogs; a embryology experiments on tadpoles; several experiments concerned with fluid dynamics; an imaging furnace test with heated glass containing gold particles (flow measurement); a Solid Surface Combustion Experiment; and a protein crystal growth experiment. Launch, in-orbit, and landing footage is shown, along with a variety of crew activities. One feature that astronauts were able to videotape was the actual in-orbit movement of the side wing flaps of the Space Shuttle.

The flight crew of the STS-48 Space Shuttle Discovery's 13th Flight (Cmdr. J. O. Creighton, Pilot Ken Reightler, MS Charles Gemar, MS James Buchli, and MS Mark Brown) review their mission and discuss their in-flight activities and experiments in this video. The primary goal of this mission was the deployment of the Upper Atmosphere Research Satellite (UARS). Secondary payloads included: the Mid-Deck Zero Gravity Experiment (MODE) that showed how fluids in microgravity and in in-orbit conditions respond to different influences (dynamics and harmonic analysis) and the Extended Duration Orbiter physiological tests of astronaut heat and lung functions. Through these experiments, information useful in the construction and design of the proposed Space Station is hoped to be gained. Earth views included: the Aurora Borealis (B/W); polar region ice packs and caps; the Nile River (at night); the Galapagos Islands, and Earth lightning shots. A night landing is shown.

In this second part of a two part video set of the mission of STS-44, an in-orbit press conference was held. The astronauts (Cmdr. Fred Gregory, Pilot Tom Hendricks, Payload Specialist Tom Hennen, and Mission Specialists Jim Voss, Story Musgrave, and Mario Runco) conversed via satellite with the Johnson Press Center at the Johnson Space Center, Houston, Texas. Journalists asked questions regarding the mission, the status of the mission's experiments, the problems with living in a microgravity environment, upcoming NASA space programs, and future objectives of the Space Shuttle missions.

The STS-44 mission is highlighted in this first part of a two part video set. The flight crew consisted of: Cmdr. Fred Gregory; Pilot Tom Hendricks; Payload Specialist Tom Hennen; and Mission Specialists Story Musgrave, Jim Voss, and Mario Runco. The primary space shuttle mission objective was the deployment of the Defense Support Program (DSP) satellite. Secondary payload and spaceborne experiments consisted of a microbial air sampler, the Terra Scout PADVOS system, an M88-1 camera demonstration, a lower body negative pressure test, the Visual Function Tester, and a bioreactor demonstration. A tour of the flight deck, mid-deck, bathroom, and flight compartments with explanations of the equipment found in each area was conducted, a trash compactor was demonstrated, and footage of the crew together for their Thanksgiving dinner was shown. Earth views include several oceans, cloud cover, typhoon Yuri, northeast Australia, and the Barrier Reef Islands. The actor John Patrick Stewart (Commander Pickard of the show 'Star Trek: The Next Generation') performed the wake-up call for the astronauts. This flight was shortened due to an inertial measurement unit failure on the sixth day of the mission.

In this second day of the STS-69 mission, the SPARTAN-201 satellite is deployed. The SPARTAN satellite is being used

for the study of solar physics. An in-orbit interview is conducted with crew member, Mission Specialist Jim Newman, by KABC 7.90 Talk Radio. Newman answers questions from station listeners regarding the mission, future NASA objectives, present NASA objectives, and general questions regarding living in space. The remaining crew members include Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss and Mike Gernhardt.

On this eleventh day of the STS-69 flight, the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt were awakened to the theme song for the cartoon 'Charlie Brown. ' The crew spent most of the day preparing the shuttle for reentry and landing. Several reporters interviewed the crew via a satellite link. Questions ranging from the status and problems with the mission to NASA's future were asked. Walker and Cockrell performed a successful landing of the space shuttle at Kennedy Space Center.

On the fourth day of the STS-69 mission, the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, were awakened by 5 year old Madeline Cockrell (Ken Cockrell's daughter) singing the song 'Bingo Was His Name.' The interception and retrieval of the SPARTAN-201 satellite was the first task of the day. The SPARTAN-201's mission was the study of the solar corona and the solar wind. The rest of the day was spent preparing for the deployment of the Wake Shield Facility (WSF), whose purpose during its two day orbit of the Earth, is to grow films for semiconductors in a vacuum-like environment. Earth views included some cloud cover and different areas of South America.

Awakening to the theme song of the television show 'Rin Tin Tin', the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, of the STS-69 mission began their fifth day in orbit. The deployment of the Wake Shield Facility (WSF) was accomplished successfully, although it was delayed several hours due to communication problems between the satellite and its carrier platform located in the shuttle's cargo bay. The WSF satellite's main purpose was to grow up to seven layers of semiconductor films in a vacuum-like state while orbiting behind the space shuttle. The shuttle's Global Positioning System and Satellite Tracking System were both given checkout tests.

After being awakened by the Beatles song, 'A Hard Days Night', the flightcrew of the STS-69 mission, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, began their sixth day in orbit by monitoring the free orbiting Wake Shield Facility (WSF). Later Cmdr. Walker conducted an interview with television reporters from Atlanta and Boston, answering questions about the mission and general questions about NASA's space program. The crew filmed a video fo themselves performing daily routines (eating, shaving, exercising), as well as some of the physiological experiments, and shuttle equipment maintenance and checkout. One of the secondary experiments included the Commercial Generic Bioprocessing Apparatus-7

(CGBA-7), which served as an incubator and experiment station for a variety of tests (agricultural, pharmaceutical, biomedical, and environmental). Earth views included some cloud cover, the Gulf of Mexico, Texas, and the Atlantic Ocean.

On the seventh day of the STS-69 mission, the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, were awakened by the theme song from the movie 'Patten.' Voss and Gernhardt performed a pre-EVA (Extravehicular Activity) checkout of the new thermal spacesuits that they will be wearing in two days. Solving problems with the Wake Shield Facility (WSF) occupied the other astronauts for most of this day. Earth views included tropical storm Marilyn in the Caribbean.

The song, 'He's A Tramp', from the Walt Disney cartoon movie, 'Lady and the Tramp', awakened the astronauts, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Jim Voss, Jim Newman, and Mike Gernhardt, on the ninth day of the STS-69 mission. The Wake Shield Facility (WSF) was again unberthed from the shuttle cargo bay and , using the shuttle's robot arm, held over the side of the shuttle for five hours where it collected data on the electrical field build-up around the spacecraft as part of the Charging Hazards and Wake Studies Experiment (CHAWS). Voss and Gernhardt rehearsed their Extravehicular Activity (EVA) spacewalk, which was planned for the next day. Earth views included cloud cover, a hurricane, and its eye.

The highlights of the STS-70 mission are presented in this video. The flight crew consisted of Cmdr. John Hendricks, Pilot Kevin Kregel, Flight Engineer Nancy Curie, and Mission Specialists Dr. Don Thomas and Dr. Mary Ellen Weber. The mission's primary objective was the deployment of the 7th Tracking Data and Relay Satellite (TDRS), which will provide a communication, tracking, telemetry, data acquisition, and command services space-based network system essential to low Earth orbital spacecraft. Secondary mission objectives included activating and studying the Physiological and Anatomical Rodent Experiment/National Institutes of Health-Rodents (PARE/NIH-R), The Bioreactor Demonstration System (BDS), the Commercial Protein Crystal Growth (CPCG) studies, the Space Tissue Loss/National Institutes of Health-Cells (STL/NIH-C) experiment, the Biological Research in Canisters (BRIC) experiment, Shuttle Amateur Radio Experiment-2 (SAREX-2), the Visual Function Tester-4 (VFT-4), the Hand-Held, Earth Oriented, Real-Time, Cooperative, User-Friendly, Location-Targeting and Environmental System (HERCULES), the Microcapsules in Space-B (MIS-B) experiment, the Windows Experiment (WINDEX), the Radiation Monitoring Equipment-3 (RME-3), and the Military Applications of Ship Tracks (MAST) experiment. There was an in-orbit dedication ceremony by the spacecrew and the newly Integrated Mission Control Center to commemorate the Center's integration. The STS-70 mission was the first mission monitored by this new control center. Earth views included the Earth's atmosphere, a sunrise over the Earth's horizon, several views of various land masses, some B/W lightning shots, some cloud cover, and a tropical storm.

This video highlights the international cooperative Shuttle/Mir mission of the STS-71 flight. The STS-71 flightcrew consists of Cmdr. Robert Hoot' Gibson, Pilot Charles Precourt, and Mission Specialists Ellen Baker, Bonnie Dunbar, and Gregory Harbaugh. The Mir 18 flightcrew consisted of Cmdr. Vladamir Dezhurov, Flight Engineer Gennady Strekalov, and Cosmonaut-Research Dr. Norman Thagard. The Mir 18 crew consisted of Cmdr. Anatoly Solovyev and Flight Engineer Nikolai Budarin. The prelaunch, launch, shuttle in-orbit, and in-orbit rendezvous and docking of the Mir Space Station to the Atlantis Space Shuttle are shown. The Mir 19 crew accompanied the STS-71 crew and will replace the Mir 18 crew upon undocking from the Mir Space Station. Shown is on-board footage from the Mir Space Station of the Mir 18 crew engaged in hardware testing and maintenance, medical and physiological tests, and a tour of the Mir. A spacewalk by the two Mir 18 cosmonauts is shown as they performed maintenance of the Mir Space Station. After the docking between Atlantis and Mir is completed, several mid-deck physiological experiments are performed along with a tour of Atlantis. Dr Thagard remained behind with the Shuttle after undocking to return to Earth with reports from his Mir experiments and observations. In-cabin experiments included the IMAX Camera Systems tests and the Shuttle Amateur Radio Experiment-2 (SAREX-2). There is footage of the shuttle landing.

A postflight conference of the STS-69 mission is presented. The flightcrew ('The Dog Team') consisted of Cmdr. David Walker, Pilot Kenneth Cockrell, Payload Cmdr. James Voss, and Mission Specialists James Newman and Michael Gernhardt. The mission's primary objective was the deployment and retrieval of the SPARTAN-201 satellite, which investigated the interaction between the Sun and it's solar wind. Other secondary experiments and shuttle payloads included the Wake Shield Facility (WSF), which grew several layers of semiconductor films, the International Extreme Ultraviolet Hitchhiker (IEH-1), the Capillary Pumped Loop-2/Gas Bridge Assembly (CAPL-2/GBA), several Get Away Specials (GAS) experiments, the Electrolysis Performance Improvement Concept Study (EPICS), the Thermal Energy Storage (TES-2) experiment, the Commercial Generic Bioprocessing Apparatus-7 (CGBA-7), the National Institutes of Health-Cells 4 (NIH-C4) experiment, and the Biological Research in Canister-6 (BRIC-6) experiment. Earth views consisted of Saudi Arabia water wells, uncommon vortices over Oman, the Amazon River, the Bahamas, Somalia, a sunset over

the Earth's horizon, and two hurricanes, Luis and Marilyn.

Report No(s): NASA-TM-111154; BRF-1384H; NIPS-95-06234; NONP-NASA-VT-95-1995006234; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this eighth day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown performing several of the spaceborne experiments onboard the USA Microgravity Lab-2 (USML-2). The experiments shown include the Astroculture(tm)(ASC) experiment, the Protein Crystal Growth (PCG) experiment, the Surface Tension Driven Convection Experiment (STDCE), the Commercial Generic Bioprocessing Apparatus (CGBA),and further testing of the High-Packed Digital Television (HI-PAC) system. An interview with Bowersox and Thornton regarding the mission's status was conducted by radio World News Now in Houston.

On this ninth day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown performing several of the spaceborne experiments onboard the USA Microgravity Lab-2 (USML-2). The experiments shown include the Surface Tension Driven Convection Experiment (STDCE) and the Protein Crystal Growth (PCG) experiment with different types of solution mixtures used. The imagery of the experiments inside the Spacelab were downlinked to Mission Control with the High-Packed Digital Television (HI-PAC) system.

On this tenth day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown performing several of the spaceborne experiments onboard the USA Microgravity Lab-2 (USML-2). The experiments shown include the Surface Tension Driven Convection Experiment (STDCE), the Drop Physics Module (DPM) experiment, and the Geophysical Fluid Flow Cell Experiment (GFFC). All experiment imagery was downlinked from the shuttle to Mission Control using the High-Packed Digital Television (HI-PAC) system.

On this fourteenth day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown performing several of the spaceborne experiments onboard the USA Microgravity Lab-2 (USML-2). The experiments shown include the Drop Physics Module (DPM) experiment, the Surface Tension Driven Convection Experiment (STDCE), the Geophysical Fluid Flow Cell (GFFC) experiment, and an experiment on fuel combustion and combustion products. Bowersox, Sacco, Thornton, and Rominger (the red team) were interviewed by high school students from Worcester, Massachusetts, who asked questions regarding the mission's experiments and general questions about living in space. Earth views included a black and white image of the Earth's atmospheric boundary layers.

On this fifteenth day of the STS-73 sixteen day mission, the crew Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Collman, and Michael Lopez-Alegria are shown hosting an in-orbit interview with various newspaper reporters from Johnson Space Center, Kennedy Space Center, and Marshall Space Flight Center via satellite hookup. The astronauts were asked questions regarding the status of the USA Microgravity Lab-2 (USML-2) experiments, their personal goals regarding their involvement in the mission, their future in the space program, and general questions about living in space. Earth views included cloud cover and a tropical storm.

STS-46 post flight press conference

Aug 14, 1992; In English

Report No(s): NASA-TM-111202; NIPS-96-07176; NONP-NASA-VT-96-1996007176; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

At a post flight press conference, the flight crew of the STS-46 mission (Cmdr. Loren Shriver, Pilot Andrew Allen, Mission Specialists Claude Nicollier (European Space Agency (ESA)), Marsha Ivins (Flight Engineer), Jeff Hoffman (Payload Commander), Franklin Chang-Dias, and Payload Specialist Franco Malerba (Italian Space Agency (ISA))) discussed their roles in and presented video footage, slides and still photographs of the different aspects of their mission. The primary objectives of the mission were the deployment of ESA's European Retrievable Carrier (EURECA) satellite and the joint NASA/ISA deployment and testing of the Tethered Satellite System (TSS). Secondary objectives included the IMAX Camera, the Limited Duration Space Environment Candidate Materials Exposure (LDVE), and the Pituitary Growth Hormone Cell Function (PHCF) experiments. Video footage of the EURECA and TSS deployment procedures are shown. Earth views were extensive and included Javanese volcanoes, Amazon basin forest ground fires, southern Mexico, southern Bolivian volcanoes, south-west Sudan and the Sahara Desert, and Melville Island, Australia. Questions from reporters and journalists from Johnson Space Center and Kennedy Space Center were discussed.

STS-74 flight day 1

Nov 12, 1995; In English

Report No(s): NASA-TM-111203; BRF-1388A; NIPS-96-07177; NONP-NASA-VT-96-1996007177; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this first day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, are shown in prelaunch and launch activities. This mission is the second of seven Mir-Space Shuttle hook-ups. Major objectives of this mission are to include a docking between Mir and the Space Shuttle and the transfer of a Russian docking module, water, supplies, and two solar arrays to the Mir space station. This mission highlights the first time that astronauts from Canada, Russia, the U.S. and the European Space Agency (ESA) will be onboard a single spacecraft in space at the same time. Additional experimental payloads onboard the shuttle are the GLO-4 PASDE Payload (GPP) experiment and the Photogrammetric Appendage Structural Dynamics Experiment (PASDE).

On the second day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, were awakened to music from the play 'The Nutcracker'. The astronauts hosted an in-orbit interview with Canadian reporters and journalists from Toronto, answering general questions about living in space and space flight, and explaining the delicate maneuvers that the shuttle will have to perform for the Mir docking procedures scheduled for the next day. Due to the awkward angle that the shuttle will use to approach the Mir, the docking procedure will be done in an almost blind state.

On this third day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield successfully connect the Russian-made docking module to the Space Shuttle using the shuttle's robot arm. There is a live, in-orbit press interview with the astronauts from inside the Russian docking module regarding the status of the mission thus far. The docking module will remain with Mir after the two spacecraft have undocked.

On this fourth day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, perform a successful docking between the space shuttle and the Mir space station using the Russian-made docking module that had been previously installed on the third day of the mission. The astronauts and the Mir 20 cosmonauts, Cmdr. Yuri Gidzenko, Flight Engineer Gergei Avdeyev, and Cosmonaut-Researcher (ESA) Thomas Reiter, are shown greeting each other from inside the docking module and an in-orbit interview between the crews and NASA is conducted in both English and Russian.

On this fifth day of the STS-74 mission, the flight crew, Cmdr. Kenneth Cameron, Pilot James Halsell, and Mission Specialists William McArthur, Jerry Ross, and Chris Hatfield, were awakened to the theme from the movie 2001: A Space Odyssey'. The Mir 20 cosmonauts, Cmdr. Yuri Gidzenko, Flight Engineer Sergei Avdeyev, and Cosmonaut-Researcher (ESA) Thomas Reiter, and shuttle astronauts are shown giving each other plaques and presents to commemorate their historic docking event and the start towards the development of the International Space Station. There is a press conference from Moscow by a one of the officers of the Russian Space Agency with both flight crews and an additional separate press interview of the crews by Canadian reporters. There is video footage of the two docked spacecraft taken from various angles.

STS-75 Flight Day 3

Feb. 24, 1996; In English; Videotape: 15 min. 8 sec. playing time, in color, with sound

Report No(s): NASA-TM-111393; BRF-1391C; NONP-NASA-VT-96-1996037038; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this third day of the STS-75 mission, the flight crew, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), are shown, with Mission Control's help, still trying to correct the problems with the 'Smart Flex' computer system which is delaying the deployment of the Tethered Satellite System Reflight (TSS-1R). There is imaging shown of the shuttle's exhaust system using water vapor.

STS-75 Flight Day 1

Feb. 22, 1996; In English; Videotape: 30 min. playing time, in color, with sound

Report No(s): NASA-TM-111391; BRF-1391A; NONP-NASA-VT-96-1996037036; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this first day of the STS-75 mission, the flight crew, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), were shown performing pre-launch and launching activities. This international space mission's primary objective is the deployment of the Tethered Satellite System Reflight (TSS-1R) to a 12 mile length from the shuttle, a variety of experiments, and the satellite retrieval. These experiments include: Research on Orbital Plasma Electrodynamics (ROPE); TSS Deployer Core Equipment and Satellite Core Equipment (DCORE/SCORE); Research on Electrodynamic Tether Effects (RETE); Magnetic Field Experiments for TSS Missions (TEMAG); Shuttle Electrodynamic Tether Systems (SETS); Shuttle Potential and Return Electron Experiment (SPREE); Tether Optical Phenomena Experiment (TOP); and Observations at the Earth's Surface of Electromagnetic Emissions by TSS (OESSE). The missions's secondary objectives were those experiments found in the USA Microgravity Payload-3 (USMP-3), which include: Advanced Automated Directional Solidification Furnace (AADSF); Material pour l'Etude des Phenomenes Interessant la Solidification sur Terre et en Orbite (MEPHISTO); Space Acceleration Measurement System (SAMS); Orbital Acceleration Research Experiment (OARE); Critical Fluid Scattering Experiment (ZENO); and Isothermal Dendritic Growth Experiment (IDGE).

STS-72 Post Flight Presentation

Peterson, Glen, Editor; Feb. 1996; In English; Videotape: 28 min. 59 sec. playing time, in color, with sound

Report No(s): NASA-TM-111390; JSC-1549; NONP-NASA-VT-96-1996036745; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

In this post flight presentation video for the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent Jett, and Mission Specialists Daniel T. Barry, Winston E. Scott, Leroy Chiao, and Koichi Wakata (NASDA), discuss their mission using flight footage and slides. The pre-launch and launching activities are shown. Using the robot arm inside the space shuttle's cargo bay, the Japanese Space Flyer Unit (SFU) is retrieved and berthed and the Office of Aeronautics and Space Technology (OAST) Flyer satellite is deployed, retrieved, and reberthed. Chiao and Barry performed the first of the two 6 1/2 hour EVAs and Chiao and Scott performed the second. In both EVAs, the thermal properties of the new space suits were tested, along with new tools and equipment that will eventually be used to build the International Space Station. Space shuttle landing activities are also shown. Earth views include cloud shadows, Africa, Brazil, Australia, and Mt. Kilimanjaro.

STS-74 Post Flight Presentation

Dec. 08, 1995; In English; Videotape: 39 min. 12 sec. playing time, in color, with sound

Report No(s): NASA-TM-111374; JSC-1538; NONP-NASA-VT-96-1996031303; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Th flight crew of the STS-74 Space Shuttle Orbiter Atlantis (Cmdr. Ken Cameron, Pilot Jim Halsell, and Mission Specialists Chris Hadfield, Jerry Ross, and William McArthur) present an overview of their flight mission, whose primary objective was the rendezvous and space docking with the Russian Mir Space Station. Video film footage includes: prelaunch and launch activities; shuttle launch; installation of the Russian-made docking module to the orbiter; in-orbit rendezvous; in-orbit docking between Mir and the orbiter; general crew activities; transfer of supplies, equipment, and a crystal growth experiment to Mir; data collection of Mir thruster firings; undocking maneuvers and Mir fly around; pre-return checkout of flight systems; and reentry and landing of the orbiter. Earth views include horizon sunsets, atmospheric boundary layers, and a variety of geographical location footage (New Orleans; Atlanta; James Bay, Canada; Poland; Turkey; Mt. Pinatubo, Philippines; Salt Lake City, Utah; and Colorado).

Challenger Anniversary Resource Tape

1996; In English; Videotape: 32 min. 50 sec. playing time, in color, with sound

Report No(s): NASA-TM-111373; JSC-1531A; NONP-NASA-VT-96-1996031302; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This commemorative video marks the tenth anniversary, January 28, 1986, of the ninth Challenger flight and the seven

astronauts onboard who died when the Challenger exploded 73 seconds into flight. The flight crew was comprised of Cmdr. Francis R. Scobee, Pilot Michael J. Smith, and Mission Specialists Judith A. Resnik, Ellison S. Onizuka, Ronald E. McNair, Gregory Jarvis (Hughes Aircraft representative), and S. Christie McAuliffe (teacher). The flight crew is shown performing preflight training, physiological tests, environmental tests, press conferences, prelaunch activities, and launch activities. The Challenger explosion is shown from both the launch site and from the control center. Various rescue operations, news coverage, and shots of the wreckage after salvage are also presented. President Ronald Reagan is shown giving a tribute at the memorial service for the flight crew. The video ends with a flyby salute and pictures of each of the members of the Challenger.

On this fifteenth day of the STS-75 mission, the flight crew, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), are shown performing various experiments. Chang-Diaz gives a short presentation about the importance of protein crystals and their use in research. A water vapor exhaust test is performed with the shuttle's exhaust jets. Earth views include land and water masses, the horizon, and there are views of the shuttle's cargo bay.

STS-69 Mission Highlights Resource Tape
Dec. 19, 1995; In English; Videotape: 55 min. 35 sec. playing time, in color, with sound
Report No(s): NASA-TM-111389; JSC-1527; NONP-NASA-VT-96-1996036744; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The STS-69 mission of the Endeavour Space Shuttle and crew are highlighted in this video. The 'Dog Crew', as they called themselves, Cmdr. Dave Walker, Pilot Ken Cockrell, and Mission Specialists Mike Gernhardt, Jim Voss, and Jim Newman, are shown performing pre-launch and launch activities; the SPARTAN-201 and the Wake Shield Facility (WSF) deployments, retrievals, and berthings; physiological and other Middeck experiments; and jet thruster firing tests on the WSF. A 6 1/2 hour EVA was conducted to test the thermal properties of the new space suits and to test the tools and equipment to be used in the construction of the International Space Station. General crew activities are also shown and Earth views include cloud cover and the WSF with the Earth as the background.

STS-72 Flight Day 2
Jan. 12, 1996; In English; Videotape: 30 min. playing time, in color, with sound
Report No(s): NASA-TM-111387; BRF-1389B; NONP-NASA-VT-96-1996034086; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this second day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Berry, Winston E. Scott, and Koichi Wakata (NASDA), awakened to music from the motion picture 'Stars Wars'. The crew performed a systems checkout, prepared for the retrieval of the Japanese Space Flyer Unit (SFU), tested the spacesuits for the EVA, and activated some of the secondary experiments. An in-orbit news interview was conducted with the crew via satellite downlinking. Questions asked ranged from the logistics of the mission to the avoidance procedures the Endeavour Orbiter performed to miss hitting the inactive Air Force satellite, nicknamed 'Misty' (MSTI). Earth views included cloud cover, several storm systems, and various land masses with several views of the shuttle's open cargo bay in the foreground.

On this third day of the STS-76 mission, the flight crew, Cmdr Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, and Ronald M. Sega, are shown performing the docking maneuvers for the Mir Space Station and the Atlantis in-orbit rendezvous. The Atlantis crew is shown greeting the Mir cosmonaut crew, Cmdr. Yuri Onufrienko and Flight Engineer Yuri Usahev. The docking procedure is shown from both outside and inside the Atlantis. An interview with Mission Control is shown from inside Mir with both crews present. There is footage of the Mir, both docked with Atlantis and free flying. Not shown is the EVA by Clifford and Godwin to attach several experimental packages to the exterior of the Mir docking module, although their packing preparation is shown.

On this fifth day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, Michael R.

Clifford, and Ronald M. Sega, pay tribute to the late astronaut Bob Overmeyer with views from the Atlantis/Mir configuration with the Earth in the background. Atlantis astronauts, interviewed by reporters from NASA Centers and Russia during an in-orbit press conference, describe their observations of Comet Hyakutake as it continues its close pass by Earth, remarking on the comet's brilliance and visibility. The astronauts and cosmonauts also took time out from their transfer and resupply activities to talk with Charlie Gibson of 'Good Morning America'.

STS-76 Flight Day 6
Mar. 30, 1996; In English; Videotape: 30 min. playing time, in color, with sound
Report No(s): NASA-TM-111412; BRF-1393F; NONP-NASA-VT-96-1996039896; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this sixth day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, Michael R. Clifford, and Ronald M. Sega are shown preparing for Godwin and Clifford's extra vehicular activity (EVA). The two astronauts are shown egressing from the Shuttle and performing activities during the EVA with the Earth in the background. Godwin and Clifford spent six hours spacewalking in Atlantis' cargo bay and on the exterior of the Mir's docking module. They are shown completing all of the objectives planned for the spacewalk, the most important of which was to install on the exterior of Mir four experiments to monitor the space environment for the next year and a half. This marks the first time that a spacewalk was conducted from a docked Space Shuttle. A variety of new tools capable of being used on both US and Russian spacecraft were evaluated during the spacewalk.

STS-76 Flight Day 7
Mar. 31, 1996; In English; Videotape: 30 min. playing time, in color, with sound
Report No(s): NASA-TM-111411; BRF-1393G; NONP-NASA-VT-96-1996039895; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this seventh day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A Searfoss, and Mission Specialists Linda M. Godwin, Michael R. Clifford, and Ronald M. Sega are shown bidding the Mir crew and Shannon W. Lucid an emotional farewell, Chilton calling it 'a bittersweet moment.' The Atlantis and Mir commanders, Chilton and Onufrienko, along with spacewalkers Godwin and Clifford took time out to talk with CBS' 'Up to the Minute.' The space flyers discussed the success of their joint mission and the 6-hour spacewalk. The astronauts and cosmonauts exchanged handshakes and hugs in the Mir core module, and then praised both mission control centers, Houston and Kaliningrad for their support throughout the joint phase of the mission.

STS-73 Post Flight Presentation
Dec. 15, 1995; In English; Videotape: 28 min. 45 sec. playing time, in color, with sound
Report No(s): NASA-TM-111375; JSC-1529; NONP-NASA-VT-96-1996031304; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The post flight presentation of the STS-73 Space Shuttle's USA Microgravity Lab. (USML) mission was presented by the flight crew, Cmdr. Kenneth Bowersox, Pilot Kent Rominger, Payload Specialists Albert Sacco and Fred Gregory, and Mission Specialists Kathryn Thornton, Catherine 'Cady' Coleman, and Michael Lopez-Alegria, using color video and slides. Film footage includes the prelaunch and launch activities, the USML and Middeck experiments (Advanced Protein Crystallization Facility (APCF), the Astroculture(tm) (ASC) hardware and experiment, the Commercial Generic Bioprocessing Apparatus (CGBA), the Crystal Growth Furnace (CGF), the Drop Physics Module (DPM), the Geophysical Fluid Flow Cell (GFFC), the Glovebox (GBX), the Zeolite Crystal Growth (ZCG) experiment, the Surface Tension Driven Convection Experiment (STDCE), the Protein Crystal Growth (PCG) experiment, three Measuring Microgravity experiments (the Space Acceleration Measurement System (SAMS), the Three Dimensional Microgravity Accelerometer (3DMA), and the Orbital Acceleration Research Experiment (OARE)), and the High-Packed Digital Television (HI-PAC) demonstration system), pre-return flight systems checkout, reentry, and space shuttle landing. The USML experiments were monitored via the HI-PAC system downlink. Earth views included mostly geographical locations (Mediterranean Sea; Turkey; Lake Powell, Arizona/Utah area; San Francisco Bay; Baltimore, Maryland; Washington, DC; India; Tibet; China; Bhutan; Philadelphia; and the Himalayas).

STS-72 Flight Day 1

Jan. 11, 1996; In English; Videotape: 28 min. 30 sec. playing time, in color, with sound

Report No(s): NASA-TM-111243; BRF-1389A; NONP-NASA-VT-96-1996034087; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this first day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Berry, Winston E. Scott, and Koichi Wakata (NASDA), were shown in prelaunch and launch activities. This was the tenth flight of the Space Shuttle Orbiter Endeavour. The primary objectives of this mission were the retrieval of the Japanese Space Flyer Unit (SFU) spacecraft, the deployment and retrieval of the NASA Office of Aeronautics and Space Technology Flyer (OAST-FLYER) spacecraft, and two 6 1/2 hour spacewalks to test hardware and tools that will be used to assemble the International Space Station. Secondary objectives included the Shuttle Solar Backscatter Ultraviolet (SSBUV-8), the Shuttle Laser Altimeter GAS(5) (SLA-01/GAS(5)), the National Institutes of Health-R3 (NIH-R3), the Space Tissue Loss (STL/NIH-C), and Thermal Energy Storage (TES-2) experiments. Get-Away-Specials (GAS) included the USAF Academy G-342 Flexible Beam Experiment (FLEXBEAM-2), the Society of Japanese Aerospace Companies G-459 Protein Crystal Growth Experiments, and the Jet Propulsion Laboratory (JPL) GAS Ballast Can with Sample Return Experiment. This night launch was shown at various angles and distances from the launching pad.

STS-76 Flight Day 1

Mar. 22, 1996; In English; Videotape: 22 min. 45 sec. playing time, in color, with sound

Report No(s): NASA-TM-111418; BRF-1393A; NONP-NASA-VT-96-1996039905; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this first day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, Michael R. Clifford, and Ronald M. Sega, are shown performing prelaunch and launch activities for the night launch of the Space Shuttle Atlantis. The primary objective of this mission is the third docking between the Mir Space Station and Atlantis and a crew transfer. Lucid will remain onboard the Mir for about four months. Other activities include an EVA by Godwin and Clifford, logistics operations, and scientific research with a SPACEHAB module, some middeck experiments, and a Get Away Special (GAS) canister. Also, almost a ton of equipment and supplies will be transferred to the Mir. Experiments

include the Mir Electric Field Characterization (MEFC), European Space Agency (ESA) Biorack life sciences experiment, Queens University Experiment in Liquid Diffusion (QUELD), Optizone Liquid Phase Sintering Experiment (OLIPSE), and a Naval Research Laboratory (NRL) GAS payload Trapped Ions in Space (TRIS), which will measure low-energy particle radiation in the inner magnetosphere. This mission also will include a KidSat, a prototype of Earth viewing cameras and instruments, that allow students in grades K-12 to see and direct the capture of pictures from space. Footage from Mission control is also included.

On this sixth day of the STS-75 mission, the flight crew, Cmdr. Andrew Allen, Pilot Scott Horowitz, Payload Cmdr. Franklin Chang-Diaz, Payload Specialist Umberto Guidoni (Italy), and Mission Specialists Jeffrey Hoffman, Maurizio Cheli (ESA) and Claude Nicollier (ESA), are shown performing experiments from the USA Microgravity Payload-3 (USMP-3). Mission Control continues to update the flight crew regarding the status of the free orbiting tethered satellite and the few experiments that they were able to start-up onboard the satellite. There is an in-orbit question and answer interview with the astronauts by a group of sixth graders from a West Virginia school. Earth views include water masses and horizon shots.

On this fourth day of the STS-76 mission, the flight crew, Cmdr. Kevin P. Chilton, Pilot Richard A. Searfoss, and Mission Specialists Shannon W. Lucid, Linda M. Godwin, Michael R. Clifford, and Ronald M. Sega, are shown performing various experiments on the Middeck and transferring supplies to the Mir Space Station. Godwin explains the European Space Agency (ESA) Biorack investigations. Chilton, Lucid and Mir Cmdr. Yuri Onufnenko talk with NASA Administrator Dan Goldin via satellite link. Lucid will be joining the cosmonauts,

Onufnenko and Flight Engineer Yuri Usachev, for a 140 day mission on the Mir.

The flight crew of the STS-72 Space Shuttle Orbiter Endeavour Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists; Leroy Chiao, Daniel T. Barry, Winston E. Scott, and Koichi Wakata (NASDA) present an overview of their mission, whose primary objective is the retrieval of two research satellites. The major activities of the mission will include retrieval of the Japanese Space Flyer Unit (SFU), which was launched aboard a Japanese H-2 rocket to conduct a variety of microgravity experiments. In addition, the STS-72 crew will deploy the AST-Flyer, a satellite, that will fly free of the Shuttle for about 50 hours. Four experiments on the science platform will operate autonomously before the satellite is retrieved by Endeavour's robot arm. Three of Endeavour's astronauts will conduct a pair of spacewalks during the mission to test hardware and tools that will be used in the assembly of the Space Station. Video footage includes the following: prelaunch and launch activities; the crew eating breakfast; shuttle launch; retrieval of the Japanese Space Flyer Unit (SFU); suit-up and EVA-1; EVA-2; crew members performing various physical exercises; various earth views; and the night landing of the shuttle at KSC.

On this tenth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., perform a routine check of the shuttle's flight control surfaces and reaction control system jets, wrap up work with a number of scientific investigations, and begin securing the cabin for the trip back to

Earth. Most experiments aboard the shuttle have been completed and stowed away, although a few will operate throughout the night and be deactivated once the crew wakes. Crew members Andy Thomas, a native of Australia, and Marc Garneau, a Canadian, each receive special greetings today as STS-77 nears its end. South Australia Premier Dean Brown called Thomas with congratulations early this morning as the shuttle passed above Brown's office in Adelaide, Australia, Thomas' hometown. Later, Canadian Prime Minister Jean Chretien called Garneau to congratulate him on the mission and the joint Canadian Space Agency and NASA experiments that were conducted.

On this ninth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., make the third rendezvous with the small aerodynamically stabilized satellite. Commander John Casper and Pilot Curt Brown guided Endeavour to just under 2,000 feet from the cylindrically shaped Passive Aerodynamically Stabilized Magnetically Damped Satellite Satellite Test Unit (PMS-STU). It was deployed from a small canister in Endeavour's payload bay earlier in the mission in an unstable, slightly tumbling attitude to observe how or whether it could stabilize itself without using satellite lifetime-limiting propellants. Casper was scheduled to take time out during the final phase of the rendezvous to talk to fellow astronaut Shannon Lucid and her two cosmonaut crewmates aboard the Russian Space Station Mir. Various views of the Earth can be seen.

On this seventh day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., return to the small, cylindrical PAMS-STU satellite and begin eight hours of station-keeping about 1,800 feet away. The second rendezvous with the Passive Aerodynamically Stabilized Magnetically Damped Satellite (PAMS) begins shortly after the crew is awakened by the song 'Down Under' performed by Men At Work, in honor of Australian-born Mission Specialist Andy Thomas. For several hours Commander John Casper and Pilot Curt Brown perform a series of thruster firings which allow Endeavor to close in on the 2 foot by 3 foot satellite. The rendezvous takes place as other crewmembers monitor ongoing science experiments in the Spacehab module and on the middeck of the orbiter.

On this third day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., can be seen focusing their attention on retrieving the Spartan satellite and returning it to the Shuttle's payload bay. Commander John Casper, Pilot Curt Brown and Mission Specialist Dan Bursch prepared for the rendezvous while Mission Specialists Andy Thomas, Mario Runco and Marc Garneau continued work on the orbiter's middeck and in the Spacehab module. The Inflatable Antenna Experiment (I.A.E) was jettisoned later in the morning and is expected to enter the Earth's atmosphere. This morning's rendezvous is the first of four planned during the mission. Following a series of jet firings, Endeavor approachs within a distance of about 30 feet from Spartan, where Garneau can be seen extending the ship's robot arm to grapple the satellite for its berthing back on its payload bay platform.

On this first day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., can be seen preforming pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Following an on-time launch, the crew of Endeavor are shown setting up a variety of experiments that will operate for much of the mission.

The flight crew of the STS-74 Space Shuttle Orbiter Atlantis Cmdr. Ken Cameron, Pilot Jim Halsell, and Mission Specialists Chris Hadfield, Jerry Ross, and William McArthur present an overview of their flight mission, whose primary objective is the rendezvous and space docking with the Russian Mir Space Station. Video film footage includes the following: prelaunch and launch activities; shuttle launch; in-orbit rendezvous; installation of the Russian-made docking module; in-orbit docking between Mir and the orbiter; general crew activities; transfer of supplies, equipment, and a crystal growth experiment to Mir; data collection from Mir thruster firings; undocking maneuvers and a Mir fly around; pre-return check-out of flight systems; and the reentry and landing of the orbiter. Earth views include horizon sunsets, atmospheric boundary layers, and a variety of geographical location footage (New Orleans; Atlanta; James Bay, Canada; Poland; Turkey; Mt. Pinatubo, Philippines; Salt Lake City, Utah; and Colorado).

On this sixth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., spend some time relaxing, then go back to working in the Spacehab module and preparing to revisit a small cylindrical satellite that they deployed on the mission's third day. Commander John Casper and Pilot Curt Brown monitor Endeavor's systems. Mission Specialist Mario Runco tests an attitude determination system using the GPS attitude and navigation experiment called GANE. The remaining crew members Mission Specialists Andy Thomas, Dan Bursch and Marc Garneau monitor the health of experiments ongoing in the Spacehab and on the middeck of the orbiter. The crew also conduct a health check of the Aquatic Research Facility (ARF) which contains starfish, mussels and sea urchins.

STS-77 Flight Day 5
May 23, 1996; In English; Videotape: 14 min. 49 sec. playing time, in color, with sound
Report No(s): NASA-TM-110126; BRF-1395E; NONP-NASA-VT-96-1996060594; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this fifth day of the STS-77 mission, the flight crew,

Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., spend the first half of their workday assisting payload controllers with investigations into materials processing of samples and the growth of crystals. The progress of starfish and mussel development in a spaceborne aquarium in the Spacehab module in the Shuttle's cargo bay is seen. The crew then move off in different directions to support work with many of the experiments that make up the fourth mission of the Spacehab pressurized module. Endeavor is about 64 miles away from the Passive Aerodynamically Stabilized Magnetically Damped Satellite-Satellite Test Unit, or PAMS-STU, which was deployed from a canister in the payload bay on day four. Since mission day five coincided with Memorial Day , the crew started the 'Indy 500' from earth orbit.

STS-77 Flight Day 4

May 22, 1996; In English; Videotape: 14 min. 58 sec. playing time, in color, with sound

Report No(s): NASA-TM-110125; BRF-1395F; NONP-NASA-VT-96-1996060593; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this forth day of the STS-77 mission, the flight crew, Cmdr. John H. Casper, Pilot Curtis L. Brown, Jr., and Mission Specialists Andrew S.W. Thomas, Ph.D., Daniel W. Bursch, Mario Runco, Jr., and Marc Garneau, Ph.D., turned their attention to the deployment of a small technology demonstration satellite known as PAMS. The Passive Aerodynamically Stabilized Magnetically-damped Satellite uses aerodynamic stabilization to orient itself properly and demonstrates a technique that could prolong the lifetime of a satellite by reducing or eliminating the requirement for attitude control propellants. After Mission Specialist Mario Runco deploys the satellite from a canister in the rear of Endeavor's payload bay, it drifts away from the orbiter in a rotating, unstable attitude by design to evaluate how quickly and effectively the spacecraft can stabilize itself using the aerodynamic stabilization method rather than by thrusters. Later in the day the crew is seen being interviewed by Canadian Television.

The flight crew of the STS-47 Space Shuttle Orbiter Endeavour Cmdr. Robert L. Gibson, Pilot Curtis L. Brown, Payload Cmdr. Mark C. Lee, Mission Specialists, N. Jan Davis, Jay Apt, Mae C. Jemison, and Payload Specialist, Mamoru Mohri, present an overview of their mission. This the 50th Shuttle flight marks the first NASA mission devoted primarily to Japan. Endeavour carries into Earth orbit Spacelab-J (SL-J), a 23-foot long pressurized laboratory built by the European Space Agency specifically for conducting experiments in a shirt-sleeve environment. SL-J contains 43 experiments, 34 provided by Japan, 7 from the USA and 2 joint experiments. Jemison becomes the first African American woman to fly in space and Mohri first Japanese to fly in space. Video footage includes the following: prelaunch and launch activities; various experiments including protein crystal growth, electronic materials, fluids, glasses and ceramics, metals and alloys, and the effects of microgravity on plants and animals; earth views of Japan, Tokyo Harbor, and Hurricane Bonnie; and the re-entry and landing of the orbiter.

On this thirteenth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., begin another day of scientific investigations on board Columbia as the Life and Microgravity Spacelab mission continues its endurance record. The seven crew members continue supporting a variety of experiments investigating the effects of microgravity on the human body. Studies looking at muscle strength and energy expenditure and pulmonary function continue throughout the day, as well as the processing of advanced semiconductor materials and alloys in the Advanced Gradient Heating Facility. In an interview with the NBC News, Mission Commander Tom Henricks is shown discussing Columbia's flight and the varied experiments that are being conducted on board. Crew members are shown participating in tests that measure their performance.

STS-78 Flight Day 11

Jun. 30, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111656; BRF-1397K; NONP-NASA-VT-96-1996085857; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this eleventh day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are shown conducting a news conference to discuss the progress of the international mission with media from the USA, Canada and Europe. During the press conference, the crew explained the relevance of the experiments conducted aboard the Life Sciences and Microgravity mission, and praised support crews and researchers on Earth who are involved in the mission. Payload Specialist Dr. Robert Thirsk told Canadian journalists of how the research will not only benefit astronauts as they conduct long-term space missions, but also people on Earth. Some of the research will aid studies on osteoporosis and the affects steroids have on bones, and also may help doctors on Earth develop treatments for muscle diseases like muscular dystrophy, Thirsk told reporters in Toronto.

STS-78 Flight Day 7

Jun. 26, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111652; BRF-1397G; NONP-NASA-VT-96-1996085861; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this seventh day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., continue as test subjects in a series of investigations that seek to understand the effects of microgravity on the human musculoskeletal system. As they approach the half-way mark of a possible record-setting Space Shuttle mission, the crew of Columbia continues its full schedule of life science and microgravity experiments.

STS-78 Flight Day 10

Jun. 29, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111655; BRF-1397J; NONP-NASA-VT-96-1996085858; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this tenth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., continue to perform in a nearly flawless fashion. The crew is shown completing another of four tests focusing on the effects of microgravity on the vestibular system in the inner ear. In space, the vestibular system sometimes becomes confused as to which way is up and down, leading to nausea and disorientation. Using specially designed head gear to monitor head movement and eye coordination, Linnehan, Brady, Favier, Thirsk and Helms performed tests throughout their shifts to determine how the head and eyes track visual and motion targets in microgravity. The study, is providing scientists with important information about the crews' ability to adapt to microgravity.

On this fifteenth day of the STS-78 mission, the forth of July, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are awakened with Bruce Springsteen's Born in the USA,' and Lee Greenwood's I'm Proud to be an American' to begin another a day on orbit. Mission Commander Tom Henricks responded to Mission Control's wake up call by saying that the five US-born crew members were very proud to be Americans, particularly on the day America celebrates its 220th anniversary. Work in the Spacelab module will continue with investigations into the effects of microgravity on muscle strength and endurance, lung function, and adaptation of the neurovestibular system to a microgravity environment. Henricks and Pilot Kevin Kregel will complete work with a laptop computer designed to test the crew's critical thinking skills and reaction time. They also will test a voice control system that allows them to reposition Columbia's closed-circuit television cameras with verbal cues, keeping their hands free to perform other tasks.

STS-78 Post Flight Presentation

Jul. 23, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-110468; JSC-1589; NONP-NASA-VT-96-1996085850; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The flight crew of the STS-78 mission, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., back from their seventeen day mission, offer a video and still photo presentation of their journey. Included in the presentation are pre-launch, launch, and post-launch activities; experiments performed in the Spacelab; and re-entry; and the landing at KSC. Each of the STS-78 crew members discuss particular aspects of the mission including the 22 LMS life science and microgravity experiments. The experiments address human physiology, metallic alloys and protein crystal growth, and the study of the behavior of fluids and materials processing in the near-weightless environment of space.

STS-78 Flight Day 17

Jul. 06, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-110467; BRF-1397R; NONP-NASA-VT-96-1996085851; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this seventeenth day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., are shown conducting routine firings of the orbiter's reaction control system jets and checking out its flight control systems and aero surfaces in anticipation of the planned landing at the Kennedy Space Center. Commander Tom Henricks and Pilot Kevin Kregel successfully fire Columbia's 44 reaction control system jets and then tests the aero surfaces that will be used during Columbia's high speed re-entry. This firings procedure is part of a test to prove a concept that may be used on Space Shuttle Discovery's next mission -- STS-82 -- to service the Hubble Space Telescope. The vernier jet firings should raise the orbit without disturbing any payloads on board, or in the case of the Hubble Space Telescope, without placing any force on the telescope's fragile solar arrays.

STS-78 Flight Day 1

Jun. 21, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111646; BRF-1397A; NONP-NASA-VT-96-1996085867; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this first day of the STS-78 mission, the flight crew, Cmdr. Terence T. Henricks, Pilot Kevin R. Kregel, Payload Cmdr. Susan J. Helms, Mission Specialists Richard M. Linnehan, Charles E. Brady, Jr., and Payload Specialists Jean-Jacques Favier, Pd.D. and Robert B. Thirsk, M.D., can be seen preforming pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Henricks shares a unique view of Columbia's climb to orbit with flight controllers from a small camera that was mounted on the flight deck. The video follows Columbia's flight from just before main engine start through main engine cutoff, showing the force of main engine and solid booster ignition as experienced by the astronauts.

STS-79 Flight Day 9

Sep. 24, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111774; BRF-1399I; NONP-NASA-VT-1996093676; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this ninth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz having completed five days of joint operations

between the American astronauts and the Russian cosmonauts are seen flying solo once again after undocking from the Mir Space Station. As Atlantis/Mir flew over the Ural Mountains of central Asia, the docking hooks and latches that joined the vehicles together were commanded open and Atlantis drifted slowly away from Mir. Wilcutt then initiated a tail-forward fly-around of the Russian space station. After one and one-half revolutions around Mir, Atlantis' jets were fired in a separation maneuver to enable Atlantis to break away from Mir. On board Atlantis, the six-member crew is settling back into its normal routine with a fairly light schedule for the remainder of the day. Early in the morning as Atlantis flew over the USA, the crew took time to talk with anchors for the CBS Up to the Minute' network news broadcast.

On this sixth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz, continue activities aboard Atlantis/Mir as the nine astronauts and cosmonauts work in their second full day of docked operations. The continuing transfer of logistical supplies and scientific hardware can be seen proceeding smoothly. Apt and Walz once again worked with the Active Rack Isolation System experiment to replace a broken pushrod. With that complete, Apt monitors the ARIS experiment as Readdy and Korzun fire small maneuvering jets on their spacecraft to test the ability of ARIS to damp out any disturbances created by the firings. Walz also is continuing his work with the Mechanics of Granular Materials experiment in Atlantis' double Spacehab module. The astronauts used the large format IMAX camera to conduct a photographic survey of Mir from the Shuttle's flight deck windows while Akers shot IMAX movie scenes of Readdy, Wilcutt, and Korzun in the Spektr module.

On this fourth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, John Blaha, Jay Apt, and Carl E. Walz, are seen docking with the Mir Space Station. After two hours of pressure and leak checks, the hatches between the two spacecraft is than opened. The two crews are seen greeting one another to begin five days of joint operations. The rendezvous and docking went flawlessly as Readdy flew the orbiter manually through the final 2,000 feet. Docking occurred within seconds of the pre-planned time and flight controllers reported that only slight oscillations were felt through the Orbiter Docking System as the two spacecraft locked together. Within hours of the hatch opening, crew members John Blaha and Shannon Lucid formally swapped places before going to bed with Blaha becoming a member of the Mir-22 crew and Lucid joining the STS-79 crew to wrap up 179 days as a member of the Mir station. Blaha joins Mir 22 Commander Valery Korzun and Flight Engineer Alexander Kaleri on Mir for the next four months. Soon after the crew members completed their welcoming ceremony, they went to work, hauling bags of water and other supplies from the Shuttle's Spacehab module into the Mir. More than 4000 pounds of equipment and logistical supplies will be transferred to the Mir before Atlantis undocks from the space station.

On this third day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, John E. Blaha, Jay Apt, and Carl E. Walz, start another busy day on orbit activating experiments in the Spacehab module. Readdy and Wilcutt are seen conducting two rendezvous burns while other crew members are seen working in the Spacehab module. The Active Rack Isolation System, or ARIS, is tended to by Walz, who performs a minor maintenance procedure on one of ARIS' vibration-damping pushrods while Akers works with an inventory management system using a bar code reader to more effectively keep track of items that will be transferred back and forth between the Shuttle and the Mir. Apt continues work with a furnace which heats to nearly 1,600 degrees centigrade to melt metal samples for study after the flight. Apt also provides a television tour of the Spacehab, which is twice its normal size for this flight to allow extra room for science experiments and logistical items slated for transfer to Mir.

STS-79 Flight Day 5

Sep. 20, 1996; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA-TM-111768; BRF-1399E; NONP-NASA-VT-1996093681; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this fifth day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz, in the first full day of joint Shuttle/Mir operations begin in with the transfer of a biotechnology investigation and logistical supplies from Atlantis to Mir. The Biotechnology System, an investigation that will study the long-term development of cartilage cells in microgravity, was transported to Mir early this morning. During his planned four-month stay on Mir, John Blaha will take weekly samples of the culture which may provide researchers with information on engineering cartilage cells for possible use in transplantation. They also took time out of their schedules to talk with Good Morning America's Elizabeth Vargas in a brief interview. Prior to beginning the day's transfer activities, all nine astronauts and cosmonauts participated in a joint planning session to outline the day's schedule.

On this seventh day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz, share a brief video tour of the Mir Space Station with flight controllers, taking a break from the transfer activities that has occupied the astronauts' time during three days of docked operations. Readdy and Apt floated through several of Mir's modules and back into Atlantis' double Spacehab module during the tour pointing out the numerous transfer items stowed on both spacecraft. Readdy, Wilcutt, Lucid and Blaha are seen discussing their mission in an interview with CNN's John Holliman.

On this second day of the STS-79 mission, the flight crew, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, John E. Blaha, Jay Apt, and Carl E. Walz, are seen in activating the double Spacehab module in the shuttle's payload bay, packing materials and supplies and filling the first four containers of water which will be delivered to the Mir Space Station. Apt and Walz set up the Active Rack Isolation System experiment in the Spacehab, a prototype of an International Space Station payload system designed to eliminate vibrations or disturbances caused by crew activity or engine firings. The double-rack which houses ARIS also contains almost 400 pounds of Russian food which is being used to simulate the weight and mass of a scientific investigation for this first test.

STS-81 Flight Day 7
Jan. 18, 1997; In English; Videotape: 10 min. playing time, in color, with sound
Report No(s): NASA-TM-112422; BRF-1403G; NONP-NASA-VT-97-1997021179; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this seventh first day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and John Blaha, and the cosmonauts of the Russian Space Station Mir continue to transfer hundreds of pounds of water, supplies, and logistical items to each other's spacecraft. More than 1,300 pounds of water have now been transferred from Atlantis to the Mir to resupply the Russian outpost, along with equipment that will be used by astronaut Jerry M. Linenger during his four-month research mission. A bioprocessing device and an experiment used to grow cartilage cells during astronaut John Blaha's four month stay on the Mir is also transferred to Atlantis for the trip back to Earth. Linenger spends most of the day collecting water samples from the Mir for analysis back on Earth and Blaha continues to exercise on a treadmill on the Mir to stay in shape for his return to Earth and a readaptation to gravity after four months of weightlessness.

The flight crew of STS-79, Cmdr. William F. Readdy, Pilot Terrence W. Wilcutt, Mission Specialists, Thomas D. Akers, Shannon Lucid, Jay Apt, and Carl E. Walz can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. STS-79 is the second Shuttle-Mir mission to carry a SPACEHAB module on board, and the first to carry a double module. The forward portion of the double module will house experiments conducted by the crew before, during and after Atlantis is docked to the Russian space station. The aft portion of the double module primarily houses the logistics equipment to be transferred to the Russian space station. Logistics include food, clothing, experiment supplies, and spare equipment for Mir.

On this ninth day of the STS-80 mission, the flight crew, Cmdr. Kenneth D. Cockrell, Pilot Kent V. Rominger, Mission Specialists, Tamara E. Jernigan, Thomas D. Jones, and F. Story Musgrave, begin preparations for two planned spacewalks with the depressurization of the shuttle's cabin from 14.7 pounds per square inch to 10.2 pounds per square inch. This reduces the amount of time Jernigan and Jones will have to prebreath pure oxygen before beginning the spacewalk. The first spacewalk will allow the astronauts to evaluate assembly and maintenance techniques that will be used for construction of the International Space Station.

On this fourth day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and Jerry M. Linenger, prepare for the fifth linkup of the Space Shuttle and the Mir Space Station. The Atlantis docks with Mir at a point 210 nautical miles above the Earth southeast of Moscow, culminating a three-day rendezvous. Two hours after docking, the hatches between Atlantis and Mir are opened and Baker and Mir 22 Commander Valery Korzun share a hug to mark the start of five days of joint operations between the two crews. After an informal welcoming ceremony in the Mir's core module, the STS-81 crewmembers receive a station safety briefing. Linenger becomes the fourth American to occupy a position on the Russian Space Station following the docking of Atlantis to the outpost. During the docked phase of the mission, the two crews transfer nearly three tons of food, water and supplies to Mir.

On this fourth day of the STS-80 mission, the flight crew, Cmdr. Kenneth D. Cockrell, Pilot Kent V. Rominger, Mission Specialists, Tamara E. Jernigan, Thomas D. Jones, and F. Story Musgrave, busily begin final preparations for the release of Wake Shield. Jones powers up the shuttle's Canadian-built

robot arm and grapples the satellite, while Jernigan powers up the Orbiter Space Vision System, which will be used to track precisely the Wake Shield's location. Cockrell places Columbia in a gravity gradient attitude to minimize disturbances during the release. Jones uses the robot arm to hold Wake Shield in position for a two-and-a-half hour cleansing by atomic oxygen molecules before moving the arm to the deploy position.

On this eighth day of the STS-81 mission, the flight crew, Cmdr. Michael A. Baker, Pilot Brent W. Jett, Mission Specialists, John M. Grunsfeld, Marsha S. Ivins, Peter J.K. Wisoff, and John Blaha, bid farewell to Jerry Linenger and cosmonauts of Mir. Prior to hatch closure, the astronauts and cosmonauts conduct a formal farewell ceremony in the Mir Core Module. They then field questions from Russian and U.S. reporters in a joint news conference. Commander Mike Baker, Pilot Brent Jett and Mission Specialists Jeff Wisoff, John Grunsfeld, Marsha Ivins and John Blaha say goodbye to Mir 22 Commander Valery Korzun, Flight Engineer Alexander Kaleri and the newest Mir crewmember, astronaut Jerry Linenger. The hatches on the two spacecraft are closed.

On this sixth day of the STS-80 mission, the flight crew, Cmdr. Kenneth D. Cockrell, Pilot Kent V. Rominger, Mission Specialists, Tamara E. Jernigan, Thomas D. Jones, and F. Story Musgrave, are awakened to news from Mission Control that the ORFEUS-SPAS astronomy satellite may be closing in on the Wake Shield Facility satellite slightly faster than originally predicted. The Orbiting and Retrievable Far and Extreme Ultraviolet Spectrometer, or ORFEUS-SPAS satellite, has conducted 77 different astronomical observations since being deployed on launch day. Jernigan reports that the VIEW-CAPL experiment, designed by students at the University of Maryland, is working well. The experiment tests capillary pumped loop technology that one day may be used for more reliable spacecraft cooling systems. The crew also sends down television pictures of the flight deck and address half a dozen questions posed via the NASA Shuttle Web on the Internet.

The fifth day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz,

Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley completing the checkout of spacesuits well ahead of schedule, allowing them to start the second spacewalk of the flight. Harbaugh and Tanner went right to work, replacing a degraded Fine Guidance Sensor and a failed Engineering and Science Tape Recorder with new spares. The astronauts also installed a new unit known as the Optical Control Electronics Enhancement Kit, which will further increase the capability of the new Fine Guidance Sensor. During the spacewalk, the astronauts and flight controllers took note of cracking and wear incurred by thermal insulation which protects several areas of the telescope.

STS-82 Day 07 Highlights
Feb. 17, 1997; In English; Videotape: 16 min. playing time, in color, with sound
Report No(s): NASA-TM-112805; BRF-1405G; NONP-NASA-VT-1997026061; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The seventh day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley performing their third spacewalk of the mission by emerging from Discovery's airlock. Their first task is the replacement of a Solar Array Drive Electronics package which is used to control the positioning of Hubble's solar arrays. Harbaugh and Tanner next venture to the top of the telescope where they replaced covers over Hubble's magnetometers, which are used to sense the telescope's position in relation to the Earth through data acquired from the Earth's magnetic field. The spacewalking astronauts then place thermal blankets of multi-layer material over two areas of degraded insulation around the light shield portion of the telescope just below the top of the astronomical observatory.

STS-82 Day 03 Highlights

Feb. 13, 1997; In English; Videotape: 16 min. 36 sec. playing time, in color, with sound

Report No(s): NASA-TM-112801; BRF-1405C; NONP-NASA-VT-1997026065; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The third day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley successfully retrieving the Hubble Space Telescope. Hawley than lowers the 12-ton observatory onto the Flight Support System berthing platform in Discovery's cargo bay, where it is latched in place for servicing. The astronauts are then seen in the mid-deck preparing for the first of four spacewalks designed to service and upgrade the scientific capabilities of the Hubble Space Telescope.

STS-82 Post Flight Presentation

Mar. 11, 1997; In English; Videotape: 33 min. 56 sec. playing time, in color, with sound

Report No(s): NASA-TM-112809; JSC-1630; NONP-NASA-VT-1997026056; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The STS-82 crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley present a video and still picture over-view of their mission. Included in the presentation are the following: the pre-launch activities such as eating the traditional breakfast, being suited up, and riding out to the launch pad, various panoramic views of the shuttle on the pad, the countdown, engine ignition, launch, shuttle roll maneuver, separation of the Solid Rocket Boosters (SRB) from the shuttle, survey of the payload bay with the Shuttle's 50-foot remote manipulator system (RMS), the successful retrieve of the Hubble Space Telescope (HST), EVA's to repair HST, release of HST, and the shuttle's landing.

STS-82 Day 04 Highlights

Feb. 14, 1997; In English; Videotape: 18 min. 35 sec. playing time, in color, with sound

Report No(s): NASA-TM-112802; BRF-1405D; NONP-NASA-VT-1997026064; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The fourth day of the STS-82 mission begins with the crew, Commander Kenneth D. Bowersox, Pilot Scott J. Horowitz, Payload Commander Mark C. Lee, and Mission Specialists Gregory J. Harbaugh, Steven L. Smith, Joseph R. Tanner, and Steven A. Hawley in preparations for conducting the second servicing mission of the Hubble Space Telescope. The first spacewalk was slightly delayed to enable ground controllers to assess the unexpected movement of one of Hubble's solar arrays, which slewed from a horizontal to a vertical position as Discovery's airlock was depressurized. Astronauts Mark Lee and Steve Smith are seen working in the cargo bay of the Shuttle Discovery. Their spacewalk to upgrade the Hubble Space Telescope lasts six hours and 42 minutes. At the conclusion of their EVA, HST has graded science instruments for an expanded view of the universe.

STS-83 Postflight Presentation

Jun. 09, 1997; In English; Videotape: 21 min. 51 sec. playing time, in color, with sound

Report No(s): NASA-TM-112516; JSC-1639; NONP-NASA-VT-1997033261; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The flight crew of the STS-83 mission, Cmdr James D. Halsell, Pilot Susan S. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Donald Thomas and Michael Gernhardt, and Payload Specialists Roger Crouch and Greg Linteris, offer a video and still photo presentation of their journey. Included in the presentation are an introduction of the crew and a short briefing by Cmdr. Halsell, the launch and ascent narrated by Still, Spacelab Module narration by Voss, mission control narrated by Cmdr. Halsell, experiment narration by Thomas and Crouch. Also included are video views of the Baja Penninsula, Sinai Penninsla, pivot-point irrigation circles, Comet Hale-Bopp, and the cross-wind landing. The crew poses outside the shuttle for photos. Crew members discuss still photos taken during the mission, including shots of sunsets, the Grand Bahamas Island, Nile River, Baja Penninsula, Indis River of India, and Guadalupe Island.

STS-82 Mission Highlight Presentation

Jun. 02, 1997; In English; Videotape: 59 min. 31 sec. playing time, in color, with sound

Report No(s): NASA-TM-112794; JSC-1632; NONP-NASA-VT-1997032904; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The STS-82 is the second in a series of planned service missions to the Hubble Space Telescope (HST). The flight crew of STS-82, Cmdr. Kenneth D. Bowersox, Pilot Scott J. Horowitz, Mission specialists, Mark C. Lee, Steven A. Hawley, Gregory J. Harbaugh, Steven L. Smith, and Joseph R. Tanner can be seen performing pre-launch activities preparing for the night launch. The crew meets the press for pre-launch photos before being transported to the launch pad. Several views can be seen of the final inspection team on the O level and the crew being readied in the 'white room'. Launch activities such as the oxygen vent hood retraction, liftoff, SRB separation, and personnel activities in the Houston Integrated Mission Control room are viewed. Subsequent footage is provided of the crew's activities during the HST rendezvous and docking, Extravehicular Activities (EVA's) preparation and EVA numbers 1, 3 and 5. During the first EVA the earth can be seen clearly in a reflection off of HST's offshroud during its 60th orbit crossing the equator. The HST deployment and views of the Hale-Bopp comet are clearly seen before Discovery's reentry and landing. After reentry a beautiful view of Discovery moving at 10,400 mph can be seen looking east from Mission Control. The ususal twin sonic boom precedes Discovery's touchdown on runway 15 at Kennedy Space Center. This second HST service mission orbited Earth 150 times and traveled 1.4 million miles.

On this second day of the STS-83 mission, the flight crew, Cmdr. James D. Halsell, Jr. Pilot Susan L. Still, Payload Cmdr, Janice E. Voss, Mission Specialists Michael L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch can be seen setting up experiments for studying the properties of combustion and the behavior of metals, materials, and fluids in the absence of gravity. The astronauts are split into red and blue teams, each working a 12-hour shift, to allow around-the-clock operations in the pressurized Spacelab science module in Columbia's cargo bay. Thomas is seen activating the Large Isothermal Furnace (LIF) experiment and the Expedite the Processing of Experiments to the International Space Station (EXPRESS) Rack while Linteris continues the activation of Protein Crystal Growth experiments.

Pressure Wave Propagation in a Screech Cycle

Sep. 25, 1997; In English; Videotape: 6 min. 35 sec. playing time, in color, with sound

Report No(s): NASA-TM-112922; CR-198467; NONP-NASA-VT-1997047951; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The screech noise generation process from supersonic under expanded jets, issuing from a sonic nozzle pressure ratio of 2.4 and 3.3 (expanded Mach number, M(sub j) = 1.10 and 1.42), is investigated experimentally. Spark Schlieren visualization at different phases of the screech cycle are clearly shown. The rms pressure fluctuation at the screech frequency is measured in the near field region by a traversing microphone.

The STS-83 mission flight crew, Cmdr. James D. Halsell Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Michael L. Gernhardt and Donald A. Thomas, and Payload Specialist Gregory T. Linteris and Roger K. Crouch present an overview of their mission. The primary payload is the Microgravity Science Laboratory (MSL), which is a collection of microgravity experiments housed inside a European Spacelab Long Module (LM). MSL features 19 materials science investigations in 4 major facilities. These facilities are the Large Isothermal Furnace, the EXpedite the PRocessing of Experiments to the Space Station (EXPRESS) Rack, the Electromagnetic Containerless Processing Facility (TEMPUS), and the Coarsening in Solid-Liquid Mixtures (CSLM) Facility, the Droplet Combustion Experiment (DCE); and the Combustion Module-1 Facility. Additional technology experiments will be performed in the Middeck Glovebox (MGBX) developed by the Marshall Space Flight Center (MSFC) and the High-Packed Digital Television (HI-PAC DTV) system will be used to provide multi-channel real-time analog science video. Preflight, launch, and orbital footage is followed a discussion of the spaceborne experiments aboard the MSL. The end footage shows the shuttle's prelanding checkout, reentry, and landing.

On this the ninth day of the STS-84 mission, the flight crew, Cmdr. Charles J. Precourt, Pilot Eileen M. Collions, Payload Cmdr, Jean-Francois Clervoy (ESA), Mission Specialists Edward T. Lu, Carlos I. Noriega, Elena V. Kondakova, Jerry M. Linenger (download), and C. Michael Foale (upload) spend the morning testing Atlantis' flight control surfaces and thruster jets to ensure they are ready to support the Shuttle's high speed return to Earth. The astronauts' final day on orbit is devoted to stowing equipment and finishing experiment work in the Spacehab module in the cargo bay. In addition to 2,600 pounds of items being brought back from the Mir Space Station, Atlantis is ferrying home astronaut Jerry Linenger, who is returning to Earth after 122 days on the Mir. If Atlantis lands as planned Saturday, Linenger will have logged 132 days in space on this flight, the second longest single spaceflight by a U.S. astronaut behind the record 188-day stay in orbit by Shannon Lucid last year.

On this eighth day of the STS-84 mission, the flight crew, Cmdr. Charles J. Precourt, Pilot Eileen M. Collions, Payload Cmdr, Jean-Francois Clervoy (ESA), Mission Specialists Edward T. Lu, Carlos I. Noriega, Elena V. Kondakova, Jerry M. Linenger (download), and C. Michael Foale (upload) sing The Cosmonauts' Song' to Mir-23 crew members Vasily Tsibliev, Alexander Lazutkin and astronaut Mike Foale, who is beginning his four-month research mission on Mir. Foale and his new crewmates played music as Atlantis departed following the joint phase of the flight. Atlantis' undocking from Mir was modified from previous joint missions in that a flyaround of the station for photographic purposes was not conducted. Instead, Pilot Eileen Collins guided Atlantis below the Mir after the two spacecraft completed their physical separation, stopping three times at distances of 90, 300 and 1,500 feet to collect data from a European sensor device designed to assist future rendezvous of a proposed European Space Agency resupply vehicle with the International Space Station. Once the data collection was completed, the shuttle took advantage of natural orbital mechanics to drift beneath and out in front of Mir.

On this forth day of the STS-84 mission, the flight crew, Cmdr. Charles J. Precourt, Pilot Eileen M. Collions, Payload Cmdr, Jean-Francois Clervoy (ESA), Mission Specialists Edward T. Lu, Carlos I. Noriega, Elena V. Kondakova, Jerry M. Linenger (download), and C. Michael Foale (upload) spend their first full day of work together conducting science investigations and transferring equipment from one spacecraft to the other. The Spacehab double module at the rear of Atlantis' payload bay was the focus of activity today as crew members conducted science experiments in the Biorack facility and transferred items to and from the Mir Space Station. In an interview with CBS News, Precourt and Tsibliev praise the sixth joint docking mission between the U.S. and Russia, indicating it is serving as a worthwhile exercise to prepare for the assembly of the International Space Station. Precourt also said the Mir appears to be in good condition despite recent systems problems, and said Mir will be a perfectly safe home for Foale for his stay on orbit.

On this eighth day of the STS-94 mission, the flight crew, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch conduct status checks and perform video documentation of some of the Microgravity Science Laboratory experiments and activities in the Spacelab. The first part of Pilot Susan Still's day involves monitoring orbiter systems and working an in-flight maintenance procedure with the Shuttle Amateur Radio Experiment (SAREX).

On this forth day of the STS-94 mission, the flight crew, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch have settled into a comfortable pace in their on-orbit home, Columbia. They continue their around-the-clock efforts with the experiments being flown as part of the Microgravity Science Laboratory payload. With no significant Shuttle system issues being worked, the crew is able to devote all of its efforts toward the science objectives of the flight.

On this first day of the STS-94 mission, the flight crew (the orginial crew of mission STS-83), Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters.

On this ninth day of the STS-94 mission, the flight crew, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch spend their morning in the Spacelab module working on several experiments. Thomas has been working with the Large Isothermal Furnace (LIF), a vacuum-heating furnace designed to heat large samples uniformly; the Middeck Glovebox (MGBX) unit; and the Internal Flows in a Free Drop Experiment (IFFD). The IFFD experiment involves containerless processing of materials using acoustic positioning techniques.

On this twelfth day of the STS-94 mission, the flight crew, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch focus on developing better methods for the efficient use of fossil fuels while reducing emissions and air pollutants. The seven-astronaut crew - divided into two teams - provides on-orbit assistance to ground controllers throughout the mission conducting these, and as many as 30 other, experiments in the Spacelab pressurized module. The goal is to emulate what laboratory work will be like on the future International Space Station.

On this eighth day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason entered the final portion of its flight. The new Mir 24 crew of Commander Anatoly Solovyev and Flight Engineer Pavel Vinogradov, who arrived on the station the same day Discovery was launched, bid farewell to Mir 23 Commander Vasily Tsibliev and Flight Engineer Alexander Lazutkin who are returning home after 185 days in space. The Soyuz vehicle carrying the Mir 23 crew home undocked from the station. Robinson again used the Southwest Ultraviolet Imaging System (SWUIS), a 7-inch imaging telescope that is pointed out of the orbiter's middeck hatch window, to observe the Hale-Bopp comet. Curbeam continued his work with the Bioreactor Demonstration System designed to perform cell biology experiments under controlled conditions. Tryggvason spent part of his time troubleshooting a computer hard drive system that support the Microgravity Vibration Isolation Mount experiment.

STS-94 Day 13 Highlights

Jul. 13, 1997; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA/TM-97-112629; BRF-1409M; NONP-NASA-VT-1997049514; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this thirteenth day of the STS-94 mission, the flight crew, Cmdr. James D. Halsell, Jr., Pilot Susan L. Still, Payload Cmdr. Janice E. Voss, Mission Specialists Micheal L. Gernhardt and Donald A. Thomas, and Payload Specialists Gregory T. Linteris and Roger K. Crouch resume work on the Droplet Combustion Experiment, burning a drop of heptane fuel at one-quarter of the atmospheric pressure on Earth. The payload controllers collect volumes of data from experiments being conducted by the seven astronauts on the Microgravity Science Laboratory mission. Halsell, Still Thomas and Linteris are seen being interviewed by the ABC Radio Network and discussing mission objectives.

STS-85 Day 07 Highlights

Aug. 13, 1997; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NASA/TM-97-112896; BRF-1410G; NONP-NASA-VT-1997047846; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this seventh day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason continue to test the Manipulator Flight Demonstration experiment, or Small Fine Arm, supplied by the National Space Development Agency of Japan, which was powered up for a final day of operations. The tests today, however, center on the ability of the arm to be remotely operated from the ground instead of onboard by the crew. The ground-commanded maneuvers of the arm demonstrated the usefulness of conducting work in space even while the crew is asleep or busy with other tasks.

On this second day of the STS-85 mission, the flight crew, Cmdr. Curtis L. Brown, Jr., Pilot Kent V. Rominger, Payload Cmdr. N. Jan Davis (Ph.D.), Mission Specialists Robert L. Curbeam, Jr. and Stephen K. Robinson (Ph.D.), and Payload Specialist Bjarni V. Tryggvason activated instruments of the Technology Applications and Science (TAS), including the Shuttle Laser Altimeter, the Infrared Spectral Imaging Radiometer (ISIR), the Cryogenic On-Orbit Long Life Active Refrigerator (COOLAR), Two Phase Flow (TPF), Critical Viscosity of Xeonon (CVX) and were initializing the Solar Constant Experiment (SOLCON) and preparing for its first observation. Work with the Japanese-built Manipulator Flight Demonstration (MFD) experiment l begins when Davis begins checkout of its Small Fine Arm, destined for use outside the International Space Station's Japanese Experiment Module.

Brown is seen being interviewed by WBTV-TV, Charlotte, N.C., and WTVD-TV, Raleigh-Durham, N.C.

On this sixth day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Berry, Winston E. Scott, and Koichi Wakata (NASDA), successfully retrieved the OAST-Flyer satellite and berthed it in the shuttle's cargo bay with Wakata using the shuttle's robot arm. Dr. Barry conducted an interview with a radio station in Houston via satellite link. He answered general questions concerning the spacewalks, the equipment, and the planned International Space Station. Earth views include cloud cover, water masses, and land masses.

On this eighth day of the STS-72 mission, the flight crew, Cmdr. Brian Duffy, Pilot Brent W. Jett, and Mission Specialists Leroy Chiao, Daniel T. Berry, Winston E. Scott, and Koichi Wakata (NASDA), awakened to the Alanis Morisette song, All I Really Want'. Secondary middeck experiments were completed along with the crew having some free personal time. Duffy, Scott, and Wakata were interviewed via satellite by

students from Johannesburg, South Africa as part of the U.S. Information Agency's Worldnet' program. They answered general questions from the students regarding their mission, the spacewalks, and the International Space Station. Earth views included cloud cover, land masses, a close-up of a storm system over Houston, Texas, and various other night time shots of the Earth.

STS-86 Day 01 Highlights
Sep. 26, 1997; In English; Videotape: 15 min. playing time, in color, with sound
Report No(s): NASA/TM-97-205911; BRF-1411A; NONP-NASA-VT-1997077152; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

On this first day of the STS-86 mission, the flight crew, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladmir G. Titov, Wendy B. Lawrence and David A. Wolf can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters.

STS-86 Day 03 Highlights

Sep. 27, 1997; In English; Videotape: 19 min. playing time, in color, with sound

Report No(s): NASA/TM-97-205913; BRF-1411C; NONP-NASA-VT-1997077154; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this third day of the STS-86 mission, the flight crew, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladmir G. Titov, Wendy B. Lawrence and David A. Wolf conduct a series of engine firings that are designed to refine Atlantis' approach to Mir. With his crewmates providing range rate and closure data obtained from a variety of tools on board, Wetherbee manually flys Atlantis up toward Mir. After docking, the hatches between the two vehicles are swung open allowing Wetherbee and Mir Commander Anatoly Solovyev to greet each other in the airlock. Wetherbee hands Solovyev a new computer for the Mir which was brought into orbit by Atlantis for installation following the docking phase of the mission. The ten crewmembers spend a few minutes greeting one another at the start of their joint work which will involve the transfer of some four tons of supplies and water from Atlantis to the Mir.

On this forth day of the STS-86 mission, the flight crew, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladmir G. Titov, Wendy B. Lawrence and David A. Wolf spend their first full day aboard the Atlantis-Mir space complex. The ten astronauts and cosmonauts begin the transfer of more than four tons of supplies. With that transfer, Mike Foale will conclude 134 days as a Mir crew member and board Atlantis as a member of the STS-86 crew. Foale spends time with Wolf, acquainting him with his new home and showing him the location of experiments and hardware.

On this seventh day of the STS-86 mission, the flight crew,

Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladmir G. Titov, Wendy B. Lawrence and Mike Foale are seen in preparations for a planned five-hour spacewalk to retrieve four experiment packages and to test tools and techniques for construction of the International Space Station. Parazynski and Titov are seen floating out of a hatch on Atlantis' tunnel adapter in front of the Orbiter Docking System to begin their spacewalk. They then affix a 121-pound instrument called a Solar Array Cap to the Docking Module for future use by Russian cosmonauts to seal off a suspected breach in the hull of the Spektr Module.

The flight crew of the STS-86 mission, Cmdr. James D. Wetherbee, Jr., Pilot Michael J. Bloomfield, Mission Specialists Scott E. Parazynski, Jean-Loup Chretien, Vladmir G. Titov, Wendy B. Lawrence and Mike Foale present an overview of their mission, whose primary objective is the rendezvous and space docking with the Russian Space Station Mir. Video film footage includes: prelaunch and launch activities; shuttle launch; in-orbit rendezvous; docking between Mir and the orbiter; general crew activities; transfer of supplies; undocking maneuvers and a Mir fly-around; and the reentry and landing of the orbiter.

STS-90 Day 13 Highlights

Apr. 23, 1998; In English; Videotape: 17 min. 37 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1998166378; BRF-1414M; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this thirteenth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk once agian take part in a variety of human autonomic experiments designed to examine blood pressure regulation in microgravity. Crew members repeat an experiment in which they use an innovative technique called microneurography. This involves placing a very fine needle in a nerve just below the knee, allowing nerve signals traveling from the brain to the blood vessels to be measured directly while the cardiovascular system is challenged using the Lower Body Negative Pressure device. LBNP is a hi-tech canister that pulls bodily fluids into the lower extremities, simulating the effect of standing on Earth.

On this eighth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk continue to operate the 26 individual experiments designed to provide insight into the operation of the nervous system, the most complex and least well-known part of the human body. The STS-90 crew members have used themselves as test subjects in a variety of experiments associated with studying functions such as blood pressure regulation , balance, coordination and sleep patterns. They also have studied a variety of animals to gain additional insight into the effects of the weightless environment of space on the development and performance of the nervous system.

On this seventh day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk continue experiments that looks at the autonomic nervous system, the part of the nervous system that automatically controls blood pressure. These investigations are designed to uncover changes that take place in blood pressure control during space flight. Crewmembers use the Lower Body Negative Pressure (LBNP) device which places a stress on the cardiovascular system similar to what is experienced when standing in Earth's gravity environment.

The flight crew, Cmdr. Kevin R. Kregel, Pilot Steven W. Lindsey, Mission Specialists Winston E. Scott, Kalpana Chawla, and Takao Doi, and Payload Specialist Leonid K. Kadenyuk present an overview of their mission. In the first part they can be seen performing pre-launch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew is seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. In the second part of the video the crew turn their attention to a variety of experiments inside the Shuttle's cabin. These experiments include the processing of several samples of materials in the glovebox facility in Columbia's middeck; the experiment called PEP, which involves heating samples and then recording the mixture as it

resolidifies; and the study of plant growth in space.

On this fifteeth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk turns its attention to dexterity tests and dissections of rats neonates and the ball-catch experiment. Mission Specialists Rick Linnehan and Dave Williams and Payload Specialist Jim Pawelczyk will dissect the newborn rats. The dexterity test will test the response of young rats as they are tilted and turned while walking and climbing on a special apparatus with various surfaces. Later, all four payload crew members will repeat the ball-catch experiment. This experiment studies the ability of the central nervous system to accept and interpret new stimuli in space. The astronauts have performed this test at various points in the mission so scientists can compare their responses as their bodies adapt to weightlessness.

On this fourteenth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk focus on the efforts of Neurolab's Neuronal Plasticity Team to better understand how the adult nervous system adapts to the new environment of space. Columbia's science crew -- Mission Specialists Rick Linnehan and Dave Williams and Payload Specialists Jay Buckey and Jim Pawelczyk -- perform the second and final in-flight dissections of the adult male rats on board. The crew euthanizes and dissects nine rats and remove the vestibular or balance organs of the inner ear; the cerebellum, the part of the brain critical for maintaining balance and for processing information from the limbs so they can be moved smoothly; and the cerebrum, one part of which controls automatic functions such as body temperature regulation and the body's internal clock, and the cortical region that controls cognitive functions such as thinking. The first dissection, which was performed on the second day of the flight, went extremely well, according to Neurolab scientists.

On this forth day of the STS-90 mission, the flight crew, Cmdr. Richard A. Searfoss, Pilot Scott D. Altman, and Mission Specialists Richard M. Linnehan, Dafydd Rhys Williams and Kathryn P. Hire, and Payload Specialists Jay C. Buckey and James A. Pawelczyk continue work with the Escher Staircase Behavior Testing of Adult Rats experiment. This is the first of two behavior testing sessions with the adult rats being used for this experiment. The rats will have a 'hyper drive' unit placed on their head which has recording electrodes made of microscopic wires that are positioned in the brain to record activity in the hippocampus. The hippocampus is that portion of the brain used to develop spatial maps to help us navigate from one place to the other. With the 'hyper drive' units in place, the rats will then be put through a maze or on a track. While the rat is maneuvering on the maze or track, the cell activity of the hippocampus will be measured and recorded.

On this seventh day of the STS-95 mission, the flight crew, Cmdr. Curtis L. Brown, Pilot Steven W. Lindsey, Mission Specialists Scott E. Parazynski, Stephen K. Robinson, and Pedro Duque, and Payload Specialists Chiaki Mukai and John H. Glenn, again test the Orbiter Space Vision System. OSVS uses special markings on Spartan and the shuttle cargo bay to provide an alignment aid for the arm's operator using shuttle television images. It will be used extensively on the next Space Shuttle flight in December as an aid in using the arm to join together the first two modules of the International Space Station. Specialist John Glenn will complete a daily back-pain questionnaire by as part of a study of how the muscle, intervertebral discs and bone marrow change after exposure to microgravity.

On this forth day of the STS-95 mission, the flight crew, Cmdr. Curtis L. Brown, Pilot Steven W. Lindsey, Mission Specialists Scott E. Parazynski, Stephen K. Robinson, and Pedro Duque, and Payload Specialists Chiaki Mukai and John H. Glenn, are seen performing an evaluation of bone cell activity under microgravity conditions. Glenn then provides blood samples as part of the Protein Turnover Experiment, which is looking at the balance between the building and breakdown of muscle. He also works with the Advanced Organic Separations (ADSEP) experiment, to provides the capability to separate and purify biological materials in microgravity; and with the Microencapsulation Electrostatic Processing System (MEPS), that studies the formation of anti-tumor

capsules containing two kinds of drugs.

On this eighth day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev enter the International Space Station where Krikalev and Currie install a new battery charging unit. Sturckow and Currie remove launch restraint bolts from some of the panels inside Zarya. Cabana, Ross, and Newman check the communications system's videoconferencing capability. Then Ross, Newman, and Krikalev transfer equipment and supplies from Endeavour for future inhabitants of the Space Station. The crew then participates in an interview with KNX Radio in Los Angeles and KARE-TV in Minneapolis, Minnesota.

On this eleventh day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are awakened with the song 'Goodnight, Sweetheart, Goodnight'. Pilot Rick Sturckow undocks Endeavour from the station and backs the shuttle away to a distance of 450 feet above the station before beginning a nose-forward fly-around. Later Cabana, Sturckow and Ross deploy the SAC-A satellite from Endeavour's payload bay. SAC-A is a small, self-contained, non-recoverable satellite built by the Argentinean National Commission of Space Activities. The cube-shaped, 590-pound satellite will test and characterize the performance of new equipment and technologies that may be used in future scientific or operational missions. The payload includes a differential global positioning system, a magnetometer, silicon solar cells, a charge-coupled device Earth camera and a whale tracker experiment.

On this fifth day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are awakened with the song 'Jerry the Rigger,' in honor of Mission Specialist Jerry Ross. Ross and Newman are then seen being readied for the first EVA. This space walk, which will last 6-1/2 hours, will focus on connecting computer and electrical cables between Unity, the two mating adapters attached to either end of Unity, and Zarya. In all, Ross and Newman will make about 40 connections during the spacewalk. This will enable power to flow to Unity for the first time in orbit and will permit Unity's avionics, computers and heaters to be activated.

On this tenth day of the STS-88 mission, the flight crew, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, James H. Newman, Jerry L. Ross, and Sergei Krikalev are awakened by the sounds of Elvis Presley's 'Hound Dog'. Today's activities are devoted mostly to tasks that ready the station for future assembly work. The crew's first job is to release some cable ties on four cables connected on an earlier space walk, three located on Unity's upper mating adapter and one on its lower adapter, to relieve tension on the lines. The space walkers also will check an insulation cover on one cable connection on the lower Pressurized Mating Adapter (PMA 2) to make sure it is fully installed. Near the end of the space walk, the astronauts conduct a detailed photographic survey of the space station from top to bottom. Finally, each astronaut test fires the Simplified Aid for Extravehicular Activity Rescue (SAFER) jet backpacks they are wearing, a type of space 'lifejacket,' that would allow an astronaut to fly back to the station if they should ever become untethered.

STS-88 Crew Interview: Frederick 'Rick' Sturckow

Dec. 17, 1998; In English; Videotape: 26 min. playing time, in color, with sound

Report No(s): JSC-1748B; NONP-NASA-VT-1999011623; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Frederick Sturckow discusses the seven-day mission that will be highlighted by the mating of the U.S.-built Node 1 station element to the Functional Energy Block (FGB) which will already be in orbit, and two spacewalks to connect power and data transmission cables between the Node and the FGB. Node 1 will be the first Space Station hardware delivered by the Space Shuttle. He also disscusses the assembly sequence.

The crew will conduct a series of rendezvous maneuvers similar to those conducted on other Shuttle missions to reach the orbiting FGB. Once the two elements are docked, Ross and Newman will conduct two scheduled spacewalks to connect power and data cables between the Node, PMAs and the FGB. The day following the spacewalks, Endeavour will undock from the two components, completing the first Space Station assembly mission.

The STS-87 mission the flight crew, Commander Kevin R. Kregel, Pilot Steven W. Lindsey, Mission Specialists Winston E. Scott, Kalpana Chawla, and Takao Doi, and Payload Specialist Leonid K. Kadenyuk present an overview of there mission. STS-87 will fly the USA Microgravity Payload (USMP-4), the Spartan-201, the Orbital Acceleration Research Experiment (OARE), the EVA Demonstration Flight Test 5 (EDFT-05). The objective of the observations are to investigate the mechanisms causing the heating of the solar corona and the acceleration of the solar wind which originates in the corona. While flying separately in the cargo bay, the Orbital Acceleration Research Experiment (OARE) is an integral part of USMP-04. It is a highly sensitive instrument designed to acquire and record data of low-level aerodynamic acceleration along the orbiter's principal axes in the free-molecular flow regime at orbital altitudes and in the transition regime during re-entry. OARE data will support advances in space materials processing by providing measurements of the low-level, low frequency disturbance environment affecting various microgravity experiments. OARE data will also support advances in orbital drag prediction technology by increasing the understanding of the fundamental flow phenomena in the upper atmosphere.

STS-88 Post Flight Presentation
Dec. 16, 1998; In English; Videotape: 34 min. 10 sec. playing time, in color, with sound
Report No(s): JSC-1775; NONP-NASA-VT-1999023680; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The flight crew of the STS-88 mission, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Currie, Jerry L. Ross, James H. Newman, and Sergei K. Krikalev, present a video mission over-view of their space flight. Images include prelaunch activities such as eating the traditional breakfast, crew suit-up, and the ride out to the launch pad. Also, included are various panoramic views of the shuttle on the pad. The crew can be seen being readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once the seven-day mission begins, the astronauts comment on the mating of the U.S.-built Node 1 station element to the Functional Energy Block (FGB) which was already in orbit, and two EVAs that were planned to connect power and data transmission cables between the Node and the FGB. The crew can also be seen conducting a series of rendezvous maneuvers similar to those conducted on other Shuttle missions to reach the orbiting FGB.

STS-88 Crew Interview: Nancy Currie
Dec. 17, 1998; In English; Videotape: 30 min. 45 sec. playing time, in color, with sound
Report No(s): JSC-1748D; NONP-NASA-VT-1999023679; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Nancy Currie discusses the seven-day mission that will be highlighted by the mating of the U.S.-built Node 1 station element to the Functional Energy Block (FGB) which will already be in orbit, and two spacewalks to connect power and data transmission cables between the Node and the FGB. Node 1 will be the first Space Station hardware delivered by the Space Shuttle. He also disscusses the assembly sequence. The crew will conduct a series of rendezvous maneuvers similar to those conducted on other Shuttle missions to reach the orbiting FGB. Once the two elements are docked, Ross and Newman will conduct two scheduled spacewalks to connect power and data cables between the Node, PMAs and the FGB. The day following the spacewalks, Endeavour will undock from the two components, completing the first Space Station assembly mission.

The Crew of STS-86 Atlantis Shuttle, Commander James D. Wetherbee, Pilot Michael J. Bloomfield, Mission Specialists Vladimar G. Titov, Scott E. Parazynski, Jean-Loup J. M. Chretien, Wendy Lawrence, and David Wolf, narrate the footage of their mission to the Mir International Space Station. Scenes include crew suit up, walk out to the transfer vehicle, strap-in into the shuttle, start of the main engine, ignition of the rocket boosters, and separation of the solid rocket boosters. The crew of Atlantis participates in an exchange of gifts with the members of Mir, and a space walk to recover experiments outside the Mir Space Station. A beautiful panoramic view of Mir above South America is seen. Scenes also depict the closing of Mir's hatch, Atlantis' separation from Mir, and the reentry of the Atlantis Space Shuttle into the Earth's atmosphere.

Footage of the Crew of STS-91 Discovery Shuttle, Commander Charles J. Precourt, Pilot Dominic L. Pudwill Gorie, Mission Specialists Wendy B. Lawrence, Franklin R. Chang-Diaz, Janet L. Kavandi, and Valery Victorovitch Ryumin, is shown. Scenes include the crew suit up, walk out to the transfer

vehicle, and strap-in into the shuttle. Also presented are scenes of the start of the main engine, ignition of the solid rocket boosters, panoramic views of the Earth as the shuttle takes off, and the separation of the solid rocket boosters. The crew of Discovery opens the payload bay doors to the Mir International Space Station, completes SPACEHAB tunnel leak checks, greets crew in Mir Space Station, and transfers materials to Mir. Beautiful panoramic views of the Moon, and Mir above Cape Canaveral are seen. Scenes also include the crew of Discovery sharing meals, and exercising. The film ends with the reentry of the Discovery Space Shuttle into the Earth's atmosphere.

On this fifth day of the STS-96 Discovery mission, the flight crew, Commander Kent V. Rominger, Pilot Rick D. Husband, and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette, and Valery Ivanovich Tokarev are seen performing logistics transfer activities within the Discovery/International Space Station orbiting complex. The crew transfers supplies, equipment, and water. Payette and Tokarev perform maintenance activities on the storage batteries in the Zarya module. Barry and Tokarev install acoustic insulation around some of the fans inside Zarya. Jernigan and Husband install shelving in 2 soft stowage racks. Husband and Barry troubleshoot and perform maintenance activities on the Early Communications System. At the end of the workday, Rominger, Jernigan, and Barry discussed the progress of the mission with NBC's 'Today,' CBS 'This Morning,' and CNN.

On this tenth day of the STS-96 Discovery mission, the flight crew, Commander Kent V. Rominger, Pilot Rick D. Husband, and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette, and Valery Ivanovich Tokarev are seen making final preparation for their return to Earth. Rominger Husband, and Ochoa checkout the flight control systems, perform hot-fired tests and verify the performance of Discovery's small steering jets. Jernigan and Tokarev stow all the equipment used in the mission. Payette deploys a small student-built payload called STARSHINE. The crew also tests all the communications channels.

Dan Goldin Presentation: Pathway to the Future
Apr. 05, 1999; In English; Videotape: 87 min. 30 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-1999064054; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

In the 'Path to the Future' presentation held at NASA's Langley Center on March 31, 1999, NASA's Administrator Daniel S. Goldin outlined the future direction and strategies of NASA in relation to the general space exploration enterprise. NASA's Vision, Future System Characteristics, Evolutions of Engineering, and Revolutionary Changes are the four main topics of the presentation. In part one, the Administrator talks in detail about NASA's vision in relation to the NASA Strategic Activities that are Space Science, Earth Science, Human Exploration, and Aeronautics & Space Transportation. Topics discussed in this section include: space science for the 21st century, flying in mars atmosphere (mars plane), exploring new worlds, interplanetary internets, earth observation and measurements, distributed information-system-in-the-sky, science enabling understanding and application, space station, microgravity, science and exploration strategies, human mars mission, advance space transportation program, general aviation revitalization, and reusable launch vehicles. In part two, he briefly talks about the future system characteristics. He discusses major system characteristics like resiliencey, self-sufficiency, high distribution, ultra-efficiency, and autonomy and the necessity to overcome any distance, time, and extreme environment barriers. Part three of Mr. Goldin's talk deals with engineering evolution, mainly evolution in the Computer Aided Design (CAD)/Computer Aided Engineering (CAE) systems. These systems include computer aided drafting, computerized solid models, virtual product development (VPD) systems, networked VPD systems, and knowledge enriched networked VPD systems. In part four, the last part, the Administrator talks about the need for revolutionary changes in communication and networking areas of a system. According to the administrator, the four major areas that need cultural changes in the creativity process are human-centered computing, an infrastructure for distributed collaboration, rapid synthesis and simulation tools, and life-cycle integration and validation. Mr. Goldin concludes his presentation with the following maxim 'Collaborate, Integrate, Innovate or Stagnate

and Evaporate.' He also answers some questions after the presentation.

STS-96 Mission Highlights, Part 1
Jul. 07, 1999; In English; Videotape: 50 min. 30 sec. playing time, in color, with sound
Report No(s): JSC-1790/PT1; NONP-NASA-VT-1999087306; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

In this first part of a three-part video mission-highlights set, the flight of the STS-96 Space Shuttle Orbiter Discovery is reviewed. The flight crew consists of Kent V. Rominger, Commander; Rick D. Husband, Pilot; and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette (Canadian), and Valery Ivanovich Tokarev (Russian). The primary goals of this mission were to work on logistics and resupply the International Space Station (ISS). This is the first flight to dock to the International Space Station. The primary payloads are the Russian cargo crane, known as STRELA, which the astronauts mount to the exterior of the Russian station segment, the SPACEHAB Oceaneering Space System Box (SHOSS), and a U.S. built crane called the ORU Transfer Device (OTD). Other payloads include the Student Tracked Atmospheric Research Satellite for Heuristic International Networking Equipment (STARSHINE), the Shuttle Vibration Forces Experiment (SVF), and the Orbiter Integrated Vehicle Health Monitoring - HEDS Technology Demonstration (IVHM HTD). The traditional pre-launch breakfast, being suited up, entry into the Shuttle, and views of the liftoff from several different vantage points are shown. In-flight footage includes views from the robot arm conducting a television survey of Discovery's payload bay and the flawless docking of the Unity module with the International Space Station. During the docking, camera views from both the ISS and Discovery are presented. These activities make up the first three Flight Days of STS-96.

STS-96 Mission Highlights, Part 2
Jul. 07, 1999; In English; Videotape: 55 min. 51 sec. playing time, in color, with sound
Report No(s): JSC-1790/PT2; NONP-NASA-VT-1999087307; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

In this second part of a three-part video mission-highlights set, on-orbit spacecrew activities performed on the STS-96 Space Shuttle Orbiter Discovery and the International Space Station are reviewed. The flight crew consists of Kent V. Rominger, Commander; Rick D. Husband, Pilot; and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette (Canadian), and Valery Ivanovich Tokarev (Russian). The primary goals of this mission were to work on logistics and resupply the International Space Station. This second part in the mission series features video from Flight Day 4-7 (FD 4-7). FD 4 of STS-96 presents astronauts Tammy Jernigan and Dan Barry completing the second longest space walk in shuttle history. Footage includes Jernigan and Barry transferring and installing two cranes from the shuttle's payload bay to locations on the outside of the station. The astronauts enter the International Space Station delivering supplies and prepare the outpost to receive its first resident crew, scheduled to arrive in early 2000 on FD 5. The video also captures the crew involved in logistics transfer activities within the Discovery/ISS orbiting complex. FD 6 includes footage of Valery Tokarev and Canadian astronaut Julie Payette charging out the final six battery recharge controller units for two of Zarya's power-producing batteries and all crew members' involvement in logistics transfer activities from the SPACEHAB module to designated locations in the International Space Station. With the transfer work of FD 6 all but complete, the astronauts conduct some additional work, installing parts of a wireless strain gauge system that will help engineers track the effects of adding modules to the station throughout its assembly. Moving the few remaining items from Discovery to the ISS, then closing a series of hatches within the station's modules leading back to the shuttle are the primary activities contained in FD 7. Final coverage features Discovery's astronauts finishing their work inside the International Space Station, closing all of the hatches and readying the shuttle's small thrusters to be fired to raise the entire complex's orbit in preparation for the undocking and departure set for FD 8.

In this third part of a three-part video mission-highlights set, spacecrew operations between the STS-96 Space Shuttle Orbiter Discovery and the International Space Station, as well as STS reentry and landing is reviewed. The flight crew

consists of Kent V. Rominger, Commander; Rick D. Husband, Pilot; and Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette (Canadian), and Valery Ivanovich Tokarev (Russian). The primary goals of this mission were to work on logistics and resupply the International Space Station. This third part of the three part series includes footage from Flight Days 8-11 (FD 8-11) of the mission. FD 8 includes the crew members moving the last items from Discovery into the International Space Station (ISS), closing the final hatch on the orbiting outpost and commanding a series of 17 pulses of Discovery's reaction control system jets to boost the station's orbit. Discovery undocks from the station, performs a 2 1/2 lap flyaround of the station, before Husband fires Discovery's jets in a final burst to move Discovery away from the station, concluding six days of docked operations. After the flyaround, Husband fires Discovery's jets to depart the station's vicinity. Beginning FD 9, as Discovery departs from the station, Mission Specialists Tammy Jernigan and Dan Barry pack away the space suit gear they used during their spacewalk early in the mission, while Commander Kent Rominger and Pilot Rick Husband practice landings on a laptop computer program. Mission Specialists Julie Payette and Valery Tokarev help to stow gear and repressurize the shuttle's cabin to its standard 14.7 pounds per square inch. The crew also readies to deploy a small, student-built payload called STARSHINE (Student Tracked Atmospheric Research Satellite for Heuristic International Networking Equipment). In and around landing preparations and the STARSHINE deploy, the crew stowe all equipment used throughout the mission. The STARSHINE satellite ejects from a canister in Discovery's payload bay on FD 10. FD 11 is completed as Discovery swoops out of the darkness as Commander Kent Rominger sets the shuttle and his crewmates down on Runway 15 at the Shuttle Landing Facility in Florida to successfully complete the first shuttle mission of the year. Several different views of the landing are highlighted in the video.

This tape is an interview with Eileen M. Collins. In July 1999, she became the first female shuttle commander in NASA history. It was her third mission to space. She was the pilot of two previous space missions. In this interview she discussed the different telescopes that have been used in prior missions. She also talked about the functions of the new telescope 'chandra' that have been used in this mission.

On this first day of the STS-93 Columbia mission, the flight crew, Commander Eileen Collins, Pilot Jeff Ashby and Mission Specialists Cady Coleman, Steve Hawley and Michael Tognini deployed the Chandra X-Ray Observatory into space. This was done after a full night of work and preparation. Chandra will study the invisible, and often violent mysteries of x-ray astronomy. Commander Collins maneuvered Columbia to a safe distance away from the telescope as an internal timer counted down to the first of a two-phase ignition of the Inertial Upper Stage. After switching to internal battery power until its solar rays are deployed, the telescope reaches an oval orbit one-third the distance to the Moon to conduct its astronomical observations. Since Chandra is safely on its way and the major objective of their mission is successfully completed, the astronauts end their long day and begin an eight hour sleep period.

Commander Eileen Collins, Pilot Jeff Ashby, and Mission Specialists Cady Coleman, Steve Hawley and Michael Tognini were awakened with the song 'Brave New Girls' performed by Teresa. Steve Hawley, the resident astronomer, continued to work with the Southwest Ultraviolet Imaging System (SWUIS) and collected images of targets associated with Mercury, Venus, Jupiter and the Moon. Collins and Ashby maneuvered Columbia in support of various experiments including observations made with the SWUIS telescope or the Midcourse Space Experiment (MSX), which used sophisticated sensors to collect ultraviolet, infrared, and visible light data of firings of the shuttle's orbital maneuvering system engines or primary reaction control system jets. Collins also conducted a conver-

sation with students at the Harbor View Elementary School in Corona Del Mar, California using the Shuttle Amatuer Radio Experiment (SAREX) system. She also checked experiments associated with the Cell Culture Module (CCM) and the Biological Research in Canister (BRIC) payloads.

Following an eight hour sleep period, the five member flight crew, Commander Eileen Collins, Pilot Jeff Ashby, and Mission Specialists Cady Coleman, Steve Hawley and Michael Tognini awakened to begin their second day in space. The main focus of Flight Day 2 activities was to activate the secondary payloads and experiments. Among those efforts was the set-up and first observations using the Southwest Ultraviolet Imaging System (SWUIS), which operates from inside the shuttle cabin. The specific targets observed included the Earth's moon, Mercury, Venus and Jupiter. A break was taken at 4:36 a.m. CDT by Collins and Coleman to do interviews with reporters from 4 major networks.

Columbia's crew began packing up experiments and preparing to return to Earth tomorrow with a touchdown planned for Kennedy Space Center at 10:20 p.m. CDT. Commander Eileen Collins and Pilot Jeff Ashby checked out the cockpit instruments, displays and flight control systems. They also test fired the 38 small steering jets. Everything was in good shape and ready for the trip back to Earth. Also, Collins and Ashby were joined by the rest of the crew for a press conference, fielding questions from reporters in Houston, Florida and Massachusetts.

The five astronauts aboard the Space Shuttle Columbia began their fourth flight day preparing to make additional celestial observations through the shuttle's windows and continue work with a variety of instruments. Pilot Jeff Ashby and Mission Specialists Steve Hawley and Michael Tognini set up an exercise treadmill and the Treadmill Vibration Information System (TVIS) which measures vibrations and changes in microgravity levels caused by on-orbit workouts. Astronomer Hawley again made observations of Venus, Jupiter and the Moon with the Southwest Ultraviolet Imaging System (SWUIS) as Commander Eileen Collins and Pilot Jeff Ashby put the shuttle in the proper orientation for his observations. Tognini and Coleman checked the bioprocessing experiments, and harvested mouse-ear cress plants as part of the Plant Growth in Microgravity experiment. Collins and Ashby once again fired the shuttle's engines so that the sensors of the Midcourse Space Experiment (MSX) satellite were able to collect ultraviolet, infrared and visible light data. Columbia was orbiting at an altitude of 182 statute miles with all of its systems in excellent condition.

The Crew of STS-96 Discovery Shuttle, Commander Kent V. Rominger, Pilot Rick D. Husband, Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette, and Valery Ivanovich Tokarev, are shown narrating the mission highlights. Scenes include walk out to the transfer vehicle, and launch of the shuttle. Also presented are scenes of the start of the main engine, ignition of the solid rocket boosters, and the

separation of the solid rocket boosters. Footage of Payette preparing the on-board camera equipment, while Barry and Jernigan perform routine checks of the equipment is seen. Also presented are various pictures of the shuttle in its orbit, the docking of the shuttle with the Mir International Space Station, and crewmembers during their space walk. Beautiful panoramic views of the Great Lake, Houston, and a combined view of Italy and Turkey are seen. The crew of Discovery is shown performing a juice ball experiment, tumbling, undocking, performing transfer operations, and deploying the STARSHINE educational satellite. The film ends with the reentry of the Discovery Space Shuttle into the Earth's atmosphere.

An overview of Flight STS-93 is presented. The primary objective of the STS-93 mission was to deploy the Advanced X-Ray Astrophysics Facility (AXAF), also known as the Chandra X-ray Observatory. The mission flew on the Columbia Shuttle, on July 22, 1999. This facility is the most sophisticated X-ray observatory ever built. Other payloads on STS-93 were: (1) the Midcourse Space Experiment (MSX), (2) Shuttle Ionospheric Modification with Pulsed Local Exhaust (SIMPLEX), (3) Southwest Ultraviolet Imaging System (SWUIS), (4) Gelation of Sols: Applied Microgravity Research (GOSAMR), Space Tissue Loss-B (STL-B), (5) Light Weight Flexible Solar Array Hinge (LFSAH), (6) Cell Culture Module (CCM), and (7) the Shuttle Amateur Radio Experiment-II (SAREX-II), (8) EarthKam, (9) Plant Growth Investigations in Microgravity (PGIM), (10) Commercial Generic Bioprocessing Apparatus (CGBA), (11) Micro-Electrical Mechanical System (MEMS), and (12) the Biological Research in Canisters (BRIC). The crew was: Eileen M. Collins, Mission Commander, the first female shuttle commander; Jeffrey S. Ashby, Pilot; Steven A. Hawley , Mission Specialist; Catherine G. Coleman, Mission Specialist; Michel Tognini (CNES), Mission Specialist. The video contains views of life aboard the space shuttle. This mission featured both a night launching and a night landing at the Kennedy Space Center.

STS-103 Crew Training
Nov. 08, 1999; In English; Videotape: 29 min. 17 sec. playing time, in color, with sound
Report No(s): JSC-1812; NONP-NASA-VT-1999202514; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The Hubble Space Telescope (HST) team is preparing for NASA's third scheduled service call to Hubble. This mission, STS-103, will launch from Kennedy Space Center aboard the Space Shuttle Discovery. The seven flight crew members are Commander Curtis L. Brown, Pilot Scott J. Kelly, European Space Agency (ESA) astronaut Jean-Francois Clervoy who will join space walkers Steven L. Smith, C. Michael Foale, John M. Grunsfeld, and ESA astronaut Claude Nicollier. The objectives of the HST Third Servicing Mission (SM3A) are to replace the telescope's six gyroscopes, a Fine-Guidance Sensor, an S-Band Single Access Transmitter, a spare solid-state recorder and a high-voltage/temperature kit for protecting the batteries from overheating. In addition, the crew plans to install an advanced computer that is 20 times faster and has six times the memory of the current Hubble Space Telescope computer. To prepare for these extravehicular activities (EVAs), the SM3A astronauts participated in Crew Familiarization sessions with the actual SM3A flight hardware. During these sessions the crew spent long hours rehearsing their space walks in the Guidance Navigation Simulator and NBL (Neutral Buoyancy Laboratory). Using space gloves, flight Space Support Equipment (SSE), and Crew Aids and Tools (CATs), the astronauts trained with and verified flight orbital replacement unit (ORU) hardware. The crew worked with a number of trainers and simulators, such as the High Fidelity Mechanical Simulator, Guidance Navigation Simulator, System Engineering Simulator, the Aft Shroud Door Trainer, the Forward Shell/Light Shield Simulator, and the Support Systems Module Bay Doors Simulator. They also trained and verified the flight Orbital Replacement Unit Carrier (ORUC) and its ancillary hardware. Discovery's planned 10-day flight is scheduled to end with a night landing at Kennedy.

The crew (Commander Robert L. Crippen, Pilot Jon A. McBride, Mission Specialists Kathryn D. Sullivan, Sally K. Ride, and David C. Leestma, Payload Specialists Marc Garneau, and Paul D. Scully-Power) prepares for the 13th Shuttle Mission. Earth Radiation Budget Satellite (ERBS) is deployed less than nine hours into flight. Components of the Orbital Refueling System are connected, demonstrating that it is possible to refuel satellites in orbit.

STS-93 Mission Highlights Resource Tape
Nov. 29, 1999; In English; Videotape: 1 hr. 28 min. playing time, in color, with sound
Report No(s): NONP-NASA-VT-1999207904; JSC-1795; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS
The STS-93 flight crew, Commander Eileen M. Collins, Pilot Jeffrey S. Ashby, and Mission Specialists Steven A. Hawley, Catherine G. Coleman, and Michel Tognini are seen performing pre-launch activities such as crew suit-up, and ride out to the launch pad for an early morning launch. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the White Room for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once on-orbit the primary objective is to deploy the Advanced X-ray Astrophysics Facility. Throughout the presentation, the astronauts take turns narrating particular aspects of the mission with which they are involved. Coleman and Tognini command Chandra to spring-eject from its cradle in the payload bay. The crew then work on the various experiments being carried out in flight. They successfully set up the first observatory using the Southwest Ultraviolet Imaging System (SWUIS). The SWUIS is used to image planets and other solar system bodies in order to explore their atmospheres and surfaces in the ultraviolet (UV) region of the spectrum. Tognini conducts a ham radio conversation with Jean-Pierre Haignere on the Mir Space Station. Towards the end of the mission Ashby, Hawley and Tognini set up an exercise treadmill and the Treadmill Vibration Information System (TVIS). The live footage ends with the reentry of Columbia into the Earth's Atmosphere. The night landing includes touchdown, deployment of the drag chute and crew departure from the vehicle.

Live footage of various isolated launch views is seen. Views of the Space Shuttle Challenger are shown from different camera sites such as the VAB (Vehicle Assembly Building) Roof, Pad Perimeter, Helicopter, Convoy, and Midfield. Also shown from different cameras is the re-entry and landing of the shuttle at Kennedy Space Center (KSC). Footage also includes the ground recovery crew as they travel to the spacecraft. Challengers crew, Commander Robert F. Overmyer, Pilot Frederick D. Gregory, Mission Specialists Don L. Lind, Norman E. Thagard, and William E. Thornton, and Payload Specialists Lodewijk van den Berg, and Taylor G. Wang are also seen leaving the craft.

The STS-51G flight crew, Commander Daniel C. Brandenstein, Pilot John O. Creighton, Mission Specialists Shannon W. Lucid, John M. Fabian, and Steven R Nagel, and Payload Specialists Patrick, Baudry, and Sultan Salman Al-Saud are seen performing pre-launch activities such as eating of the traditional breakfast, ride out to the launch pad, and crew suit-up for an early morning launch. Also, included are various panoramic views of Discovery on the pad. The main objective of this mission is to deploy three communication satellites. The satellites being deployed are MORE LOS-A, for Mexico; ARABSAT-A, for the Arab Satellite Communications Organization; and TELSTAR-3D, for AT&T. The crew also retrieve the SPARTAN-1 satellite. Scenes include the crew in the mess deck via video link with Mission Control Center in celebration of the 100th American in space. Al-Saud also spoke with his father in Saudi Arabia via video link. Views of certain experiments are also seen. Al-Saud is seen conducting the postural experiment, and Baudry is seen conducting the equilibrium experiments. Panoramic views of the Hawaiian Island Archipelago, and Wadi Habawnah, Saudi Arabia are also visible from the shuttle. Live footage ends with the re-entry of the vehicle into the Earth's Atmosphere, an early morning touchdown at Edwards Air Force Base and crew departure from the craft.

Live footage of a preflight interview with Mission Specialist Jean-Francois Clervoy is seen. The interview addresses many different questions including why Clervoy became an astronaut, what were the events that led to his interest. Other interesting information that this one-on-one interview discusses is an explanation of the why this required mission to service the Hubble Space Telescope must take place at such an early date, replacement of the gyroscopes, transistors and computers. Also discussed is an explanation of the ESA (European Space Agency) involvement in this mission, and a brief touch on Clervoy's responsibility during any of the given four space walks scheduled for this mission.

Galileo Press Conference from JPL, Parts 1 and 2
Dec. 08, 1992; In English; Videotape: Running time 1 hr., 22 min., in color, with sound
Report No(s): NONP-NASA-VT-2000001065; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This two-tape Jet Propulsion Laboratory (JPL) video production presents a Dec. 8, 1992 press conference held at JPL to discuss the final Galileo spacecraft encounter with Earth before beginning its journey to Jupiter. The main theme of the conference was centered on the significance of the 2nd and final Earth/Moon flyby as being the spacecraft's last planetary encounter in the solar system before reaching Jupiter, as well as final flight preparations prior to its final journey. Each person of the five member panel was introduced by Robert MacMillan (JPL Public Information Mgr.) before giving brief presentations including slides and viewgraphs covering their area of expertise regarding Galileo's current status and future plans. After the presentations, the media was given an opportunity to ask questions of the panel regarding the mission. Mr. Wesley Huntress (Dir. of Solar System Exploration (NASA)), William J. ONeill (Galileo Project Manager), Neal E. Ausman, Jr. (Galileo Mission Director), Dr. Torrence V. Johnson (Galileo Project Scientist) and Dr. Ronald Greeley (Member, Imaging Team, Colorado St. Univ.) made up the panel and discussed topics including: Galileo's interplanetary trajectory; project status and performance review; instrument calibration activities; mission timelines; lunar observation and imaging; and general lunar science. Also included in the last three minutes of the video are simulations and images of the 2nd Galileo/Moon encounter.

Highlights of the third day of the STS-103 mission on board the space shuttle Discovery are shown in this videotape. The mission was led by Commander Curtis L. Brown, with Pilot Scott J Kelly, and Mission Specialists Steven L. Smith, Jean-Francois Clervoy, John M. Grunsfeld, Michael Foale, and Claude Nicollier. The main purpose of the mission was to service the Hubble Space Telescope (HST). The primary objective of the mission was to replace all six of the gyroscopes that make up the three Rate Sensor Units. In addition the Astronauts installed a new computer. During the third day when Discovery reached a point about 35 feet from Hubble, astronaut Jean-Francois Clervoy used the robot arm to capture the telescope's grapple fixture located midway up the HST structure. The approach to the HST is described and the actual

maneuver aimed at retrieving the telescope is also described. The video includes actual live views of the HST in the shuttle's service bay, the shuttle, and shots of Johnson mission control.

STS-99 Crew Interviews: Janet L. Kavandi
Aug. 09, 1999; In English; Videotape: 18 min., 43 sec., running time, in color, with sound
Report No(s): NONP-NASA-VT-1999208099; JSC-1792-D; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This NASA JSC video release is one in a series of space shuttle astronaut interviews and was recorded Aug. 9, 1999. Mission Specialist, Janet L. Kavandi, Ph.D. provides answers to questions regarding her role in the Shuttle Radar Topography Mission (SRTM), mission objectives, which center on the three-dimensional mapping of the entire Earth's surface, shuttle imaging radar, payload mast deploy and retraction, data recording vs. downlinking, the fly cast maneuver, applications of recorded data, international participation (DLR), the National Imaging and Mapping Agency (NIMA), and EarthCam (educational middle school project). The interview is summed up by Dr. Kavandi explaining that the mission's objective, if successful, will result in the the most complete high-resolution digital topographic database of the Earth.

The crew, Commander Henry W. Hartsfield, Jr., Pilot Michael L. Coats, Mission Specialists Judith A. Resnik, Steven A. Hawley, and Richard M. Mullane, and Payload Specialist Charles D. Walker are seen participating a panel discussion. Live footage of the Press Conference begins with a brief introduction of all the crew, followed by highlights of the flight, a selection of slides and still pictures, and ends with a question and answer segment. The highlights consist of the astronauts walk out to the Astro-Van, panoramic views of the Discovery on the launch pad, main engine start, ignition of the solid rocket boosters, liftoff, and separation of the boosters. Images of the opening of the sun shield and the deployment of the three communication satellites (Satellite Business System (SBS-D), SYNCOM IV-2, and TELSTAR) are also seen. The crew is seen working on experiments, dumping the wastewater, eating supper, and sleeping. Concluding the live footage are slides, and stills of various areas around the world, including the Libyan Desert, Angola, Namibia, and Australia. The Press Conference ends with questions from Houston, NASA Headquarter, Kennedy Space Center, and Marshall Space Flight Center.

Today Discovery's astronauts begin preparing the spacecraft for it's scheduled return to Earth by checking out the flight control system and reaction control jets that support re-entry. Later in the day the astronauts begin stowing equipment used during the past week and start buttoning up on-orbit systems. The Ku-band antenna which provides most of the capacity for data and television relay was stowed around 8:45 p.m. The recently refurbished Hubble Space Telescope moves slowly through it's checkout sequence before resuming science operations. Both the flight control system (FCS) and the reaction control jets (RCS) were without issue, with all systems ready to support Discovery's return to Earth.

Highlights of the fifth day of the STS-103 mission on board the space shuttle Discovery are shown in this videotape. The mission was led by Commander Curtis L. Brown, with Pilot Scott J Kelly, and Mission Specialists Steven L. Smith, Jean-Francois Clervoy, John M. Grunsfeld, Michael Foale, and Claude Nicollier. The main purpose of the mission was to service the Hubble Space Telescope (HST). The primary objective of the mission was to replace all six of the gyroscopes that make up the three Rate Sensor Units. In addition the Astronauts installed a new computer. During the 5th day Michael Foale and Claude Nicollier performed the servicing of the HST in an 8 hour 10 minute Extravehicular Activity (EVA). The servicing included the removal of the old computer and the installation of a new, faster computer with more memory. They also installed a new outer thermal layer to protect the computer. After this was finished the astronauts replaced one of the Fine Guidance Sensors (FGS), an optical sensor which allows NASA to point the telescope in the desired direction. The video includes actual live views of the HST in the shuttle's service bay, and footage of the repair and servicing EVA.

STS-99 Crew Interviews: Kevin R. Kregel

Aug. 04, 1999; In English; Videotape: 20 min., 20 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999208101; JSC-1792A; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Live footage of a preflight interview with Mission Commander Kevin R. Kregel is seen. The interview addresses many different questions including why Kregel became an astronaut, the events that led to his interest, his career path through the Air Force and later the Navy, and then finally, his selection by NASA as an astronaut. Other interesting information that this one-on-one interview discusses is the purpose for the Shuttle Radar Topography Mission (SRTM), with specific focus placed on why this SRTM flight is important, and what we will learn from the 3D topographic map of the Earth. The two antennas that will be taking the pictures, the involvement of the National Imagery and Mapping Agency (NIMA), EARTHCAM, a student-controlled camera on the Endeavour Orbiter, and Kregel's responsibility during this 24 hour mission are also discussed.

STS-99 Crew Interviews: Mamoru Mohri

Aug. 05, 1999; In English; Videotape: 14 min. 18 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999208098; JSC-1792F; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

Live footage of a preflight interview with Mission Specialists Mamoru Mohri is seen. The interview addresses many different questions including why Mohri became an astronaut, the events that led to his interest, his career path, and then finally, his selection by NASDA as an astronaut. Other interesting information that this one-on-one interview discusses is the purpose for the Shuttle Radar Topography Mission (SRTM). Specific interest is on the importance of this SRTM flight, the knowledge that we will gain from the 3D topographic map of the Earth, and the reason why this 3D data is being recorded instead of down-linked. The two antennas that will be taking the pictures, the involvement of the National Imagery and Mapping Agency (NIMA), and EARTHCAM, a student-controlled camera on the Endeavour Orbiter, Mohri's responsibility during this 24 hour mission, and his secondary experiments with high definition TV cameras are also discussed.

STS-103: Flight Day 6 Highlights and Crew Activities Report

Dec. 25, 1999; In English; Videotape: 25min. 19 sec. running time, in color, with sound

Report No(s): NONP-NASA-VT-2000001111; BRF-1420F; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Discovery's astronauts (Mission Commander, Curtis L. Brown; Pilot, Scott J. Kelly; Mission Specialists, Steven L. Smith, C. Michael Foale, and John M. Grunsfeld; and (ESA) Mission Specialists, Claude Nicollier and Jean-Francois Clervoy) deliver a Christmas present to the world, putting the Hubble Space Telescope back into service after 24 hours and 33 minutes of repairs and upgrades that make the orbital observatory more capable than ever. European Space Agency Astronaut Jean-Francois Clervoy uses the shuttle's robot arm to release the telescope at 5:03 p.m. CST, then places the arm into an upright salute as Commander Curt Brown fires Discovery's steering jets to begin separating from the telescope. The telescope's re-deployment takes place at an altitude of 370 statute miles as the two spacecraft fly over the South Pacific's coral sea northeast of Australia. At 5:39 CST, Brown executes a second steering jet burn, lowering Discovery's orbit slightly, so that it will begin orbiting faster than the telescope and move away at just under 6 statute miles per orbit. Afterward, each of the seven astronauts on board calls down holiday wishes from space in several languages.

STS-103 Discovery Launch Scrub Press Conference
Dec. 16, 1999; In English; Videotape: 30 min. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000008137; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

A press conference held on December 16, 1999, to explain the reason behind NASA's decision to delay the Discovery's launching by a period of 24 hrs is presented. According to Ron Dittemore, Space Shuttle Program Manager, the STS-103 team delayed the launch because they need extra time to check one vendor's manufacturing processes, after an x-ray inspection revealed that an improper weld rod was used to weld one of the pressuring lines (called NPS lines) in the ET (external tank). Mr. Dittemore explained that since it is in the ET (not a major load carrying structure and rebuild after each flight), it did not pose any danger to the STS-103 flight. However, the same vendor also manufactured some parts of the orbiter and the team wanted to make sure that the quality of the vendor's manufacturing processes is robust before launching the orbiter to space. He also answered some reporters' questions.

The Hubble Space Telescope (HST) team is preparing for

NASA's third scheduled service call to Hubble. This mission, STS-103, will launch from Kennedy Space Center aboard the Space Shuttle Discovery. The seven flight crew members for STS-103 are: Commander Curtis L. Brown (his sixth flight), Pilot Scott J. Kelly and European Space Agency (ESA) astronaut Jean-Francois Clervoy (his third flight) will join space walkers Steven L. Smith (his third flight), C. Michael Foale (his fifth flight), John M. Grunsfeld (his third flight) and ESA astronaut Claude Nicollier (his fourth flight). This current video presents a live footage of the seven STS-103 crewmembers eating breakfast, suiting, and departing the O&C (Operations and Checkout) before the 6:50 p.m. lift-off.

Live footage of a preflight interview with (French Canadian) Mission Specialist Julie Payette is seen. The interview addresses many different questions including why Payette wanted to be an astronaut, the events that led to her interest, and her career path. Other interesting information that this one-on-one interview discusses is this logistics and supply mission, why it is important to send equipment to the International Space Station (ISS) before the astronauts, and the Integrated Cargo Carrier. Payette mentions Discovery's anticipated docking with the ISS, the space walk with Mission Specialists Tamara E. Jernigan, and Daniel T. Barry and her responsibility as IV (intra-vehicular) crewmember. She also mentions plans for the supply and equipment transfers, the change out of battery chargers, her involvement in the installation of mufflers, the Canadian Space Vision Systems, and the future automatic docking of the Service Module to the Zarya Module of the ISS. A fly-around mission, and the deployment of the Student Tracked Atmospheric Research Satellite for Heuristic International Networking Equipment (STARSHINE) are also discussed.

STS-96 Crew Interview: Valery Tokarev
Mar. 18, 1999; In English; Videotape: 28 min. 30 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-1999213302; JSC-1778G; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Live footage of a preflight interview with the Russian Cosmonaut Valery Ivanovich Tokarev is presented. The interview addresses many different questions including why Tokarev wanted to be a cosmonaut, and the events that led to his interest. Other interesting information that this one-on-one interview discusses is this logistics and supply mission, and why it is important to send equipment to the International Space Station (ISS) before the astronauts. Tokarev compares both the Russian and USA space programs, and space shuttles. He mentions the logistics and supply mission, plans to transfer the supply, his involvement with the installation of mufflers, and the undocking of Discovery. The future automatic docking of the Service Module to the Zarya Module of the ISS, and the role that the ISS will play in future space flight and exploration are also discussed.

This NASA KSC video release presents part of a press conference held prior to Discovery flight STS-26, the first shuttle mission flown following the 51-L Challenger accident. The five member panel present individual viewgraph discussions followed by a question and answer period for the benefit of scientific journalists. William A. Chandler (Asst. to the Dir. of Engineering and the NSTS program) gives a brief overview of the crew escape system followed by Steven Nagel's (Astronaut) presentation on crew equipment. Robert Rice (Crew Escape System Manager) describes the flight test program and the innovative pyrotechnics system test program. Tim Pelischek (Pole Design Team) gives an assessment of the critical design review and Ricardo Machin reviews aerodynamic flight tests performed at Texas A&M and California. The second part of the video includes Robert Crippen's (Deputy Dir. of Operations, Kennedy Space Center) overview of NASA Management, the organizational changes and actions taken to meet the Roger's Commission recommendations.

This NASA KSC video release presents part of a press conference held prior to Discovery flight STS-26, the first shuttle mission flown following the 51-L Challenger accident. The video includes presentations by Gerald Smith (Solid Rocket Booster (SRB) Project Manager) and Joe Lombardo (Space Shuttle Main Engine (SSME) Project Manager) discussing the major changes that were made to the SRB and SSME between 51-L and STS-26. Mr. Smith's talk centered on the changes and redesigns made to the solid rocket motor field joint, the case to nozzle joint, the SRB aft skirt, and the ET aft attach ring. Mr. Lombardo discusses test data evaluation, SSME inspections and the SSME heat exchanger in particular.

This NASA KSC video release presents part of a press conference held prior to Discovery flight STS-26, the first shuttle mission flown following the 51-L Challenger accident. The first portion of the video presents the 5 member flight crew, (Frederick H. Hauck, Commander, Richard O. Covey, Pilot, John M. Lounge, Mission Specialist, George D. Nelson, Mission Specialist, and David C. Hilmers, Mission Specialist) answering questions posed by scientific journalists. Inquiries are made regarding the approximately 250 changes implemented on the orbiter and boosters, failures that occurred during 51-L, astronaut attitudes about flying the first mission since the Challenger accident, and the issue of range safety. The second part of the video includes viewgraph presentations given by Dr. Dale W. Harris (TDRS Project Manager, Goddard Space Flight Center(GSFC)) and Gary A. Morse (Network Director, GSFC) that discuss the primary payload, the NASA Tracking and Data Relay Satellite-3 (TDRS-3) that is attached to an Inertial Upper Stage (IUS), and is the second TDRS deployed.

The primary objective of the STS-93 mission was to deploy the Advanced X-ray Astrophysical Facility, which had been renamed the Chandra X-ray Observatory in honor of the late Indian-American Nobel Laureate Subrahmanyan Chandrasekhar. The mission was launched at 12:31 on July 23, 1999 onboard the space shuttle Columbia. The mission was led by Commander Eileen Collins. The crew was Pilot Jeff Ashby and Mission Specialists Cady Coleman, Steve Hawley and Michel Tognini from the Centre National d'Etudes Spatiales (CNES). This videotape shows the astronauts getting into spacesuits, and inspecting the equipment.

Atlas Centaur/GOES-J News Conference, Part 1 of 2

May 18, 1995; In English; Videotape: 1 hr. 2 min. 28 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000000038; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

Live footage of the GOES-J Satellite News Conference is presented. The participants of this conference include several NASA and NOAA officials. Floyd Curington, NASA's Launch Manager at the Kennedy Space Center, spoke briefly about the AC-77 launch vehicle. Pat Symons, the NASA Launch Vehicle Manager from the Lewis Research Center, discusses the launch window, the vehicle thrust, the Centaur Liquid Hydrogen, and the parking orbit. Martin Davis, NASA Mission Director from the Goddard Space Flight Center, touches on the NOAA partnership. Steven Kirkner, NOAA's GOES Systems Acquisitions Manager, addresses issues of the National Weather Satellite, the 24-hour observation, and the variable scan capacity of the satellite. Joel Tumbiolo, Launch Weather Officer from the USAF 45th Space Wing, presents data images of storm systems over Central USA; his main focus is on the Florida and Gulf of Mexico areas. Tumbiolo also discusses anvil clouds and thunderstorms, and question and answer session is presented. Immediately following this conference is the NOAA/GOES-J News Briefing. Live coverage of the presentation with panelists Gary Davis, Director, Satellite Operations; Dr. James Purdom, Chief Regional and Mesoscale Meteorology; Frederick Ostby, Director, National Severe Storms Forecast Center; and Steven Kirkner, GOES System Acquisition Manager is shown. Gary addresses the issue with the GOES-8 Satellite and the solutions to the problems that were encountered, the GOES-9 Satellite launching, its checkout and the reliability improvements that were made. Jim presents pictographic comparisons between GOES-8 and GOES-7, the GOES-8 Imager Noise Levels, Hurricane Rosa, and the thunderstorm over the Northern Gulf of Mexico. He also looks at storms in the Hudson Bay, Nova Scotia, and the Gulf of Lawrence areas. As the final speaker, Fred discusses GOES-8, Geostationary Satellites, the Automatic Surface Observation System (ASOS), and the Doppler Radar Network. This Abstract describes the content of tape 1 of 2, tape 2 has a Report number of NONP-NASA-VT-1999206992.

This NASA Johnson Space Center (JSC) video release presents a one-on-one interview with Mission Specialist 3, Michel Tognini (Col., French Air Force and Centre Nacional Etudes Spatiales (CNES) Astronaut). Subjects discussed include early influences that made Michel want to be a pilot and astronaut, his experience as a French military pilot and his flying history. Also discussed were French participation in building the International Space Station (ISS), the STS-93 primary mission objective, X-ray observation using the Advanced X-ray Astrophysics Facility (AXAF), and failure scenarios associated with AXAF deployment. The STS-93 mission objective was to deploy the Advanced X-ray Astrophysics Facility (AXAF), later renamed the Chandra X-Ray Observatory in honor of the late Indian-American Nobel Laureate Subrahmanyan Chandrasekhar.

This NASA KSC video release begins with opening remarks from Mission Commander Vance D. Brand followed by the other 4 spacecrew panel members (Robert L. Gibson, Pilot, and Mission Specialists, Bruce McCandless II, Ronald E. McNair, Robert L. Stewart) commenting on a home-video that includes highlights of the entire flight from take-off to landing. This video includes actual footage of the deployment of the Westar-VI and PALAPA-B2 satellites as well as preparation for and the actual EVA's that featured a Spacepak that enabled the astronauts to move outside the orbiter untethered. This video is followed by a slide presentation made-up of images taken from approximately 2000 still photographs taken during the mission. All of the slides are described by members of the space crew and include images of the Earth seen from Challenger. A question and answer period rounds out the video, which include problems encountered with the deployment of the satellites as well as the possibilities of sending civilians into space.

STS-93: Columbia/Chandra Crew Press Conference

Jan. 21, 1999; In English; Videotape: 20 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000008127; KSC-TV; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This videotape consists of six different segments. The first segment is a close-up shot from Near-Earth Asteroid Rendezvous (NEAR) of the asteroid EROS. The second presents close-up shots of the Chandra telescope in the clean room. The third segment is an animated film showing the deployment of the Chandra telescope from the shuttle payload bay, and views of the elliptical orbit patterns that the telescope is planned to take. The fourth segment shows TRW Executive Vice President & General Manager, Systems & Information Technology Group, Donald Winter announcing the delivery of the Chandra Telescope to NASA. The fifth part was announced on the tape as an interview of Carolyn Griner, the Deputy Director of Marshall Space Flight Center, but this is not on the tape. The sixth segment shows views of the fourth USA Microgravity Payload (USMP-4) experiments. After shots of the STS-87 liftoff, the tape has views of the Isothermal Dendrite Growth Experiment (IDGE), views of the payload bay, and some further views of the astronauts working on one of the experiments in the payload.

STS-93: Columbia / Chandra Mission Overview (from JSC)

Jul. 07, 1999; In English; Videotape: 1 hr. 34 min. 10 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000008133; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

A press briefing held on July 7, 1999 reviews the progress of the Chandra X ray Observatory project. The tape begins with an animated view of the launch of the Chandra X ray Observatory from the shuttle, as it was planned. Next is a press briefing. Bryan Austin, the Lead Flight Director, discusses the five day mission, and the reason for the shortened length, due to the added weight from the Chandra Observatory. He also reviews the other payloads, and activities that will take place during the mission. Kenneth Ledbetter, Science Director Mission Development, discusses the 4 great observatories and the role of each. They are the Hubble, which observed visible light; Compton Gamma Ray Observatory, the Chandra, and the Space Infrared Telescope Facility. A time line of the expected operational lifetime of each of the 4 great observatories is shown. Specific information about the Chandra Telescope is reviewed. The last press briefing presenter is Fred Wojtalik, who is the Chandra Program Manager. He reviews the Chandra's components, and acknowledges a few of the many companies that contributed to its building. He also reviews the orbital activation and checkout sequences. Question that follows, center around contingency plans if some part of the planned sequence is not successful. The costs are reviewed, and concerns about the Initial Upper Stage, the propulsion unit required to take the Chandra to its high orbit are addressed. The Chandra is planned to take an eliptical orbit, which is higher than the other space telescopes, thus far launched due to the requirement to avoid Earth generated X rays.

Report No(s): NONP-NASA-VT-2000013419; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This NASA Kennedy Space Center video release presents the April 19, 1991 STS-37 post-flight crew press conference from Johnson Space Center (JSC). The video begins with Steven R. Nagel, Commander applauding the efforts of everyone involved in the very smooth shuttle mission and introducing the rest of the crew seated to his right: Kenneth D. Cameron (1), Pilot, Jerry L. Ross, Mission Specialist 1, Jay Apt, Mission Specialist 2, and Linda M. Godwin, Mission

Specialist 3. A video presenting mission highlights and onboard activities including liftoff footage, and the deployment of the primary payload, Gamma Ray Observatory (GRO), is shown. The GRO high-gain antenna failed to deploy on command and had to be manually freed and deployed by astronauts Ross and Apt during an unscheduled contingency space walk, the first since April 1985. After the mission summary video is shown, a slide show that includes pictures of Earth from Atlantis, and views of the GRO is presented and is followed by a question and answer period with questions posed by scientific journalists from JSC and other NASA centers. Part 2 of the press conference can be found in Report Number NONP-NASA-VT-2000013420.

The primary objective of the STS-37 mission was to deploy the Gamma Ray Observatory. The mission was launched at 9:22:44 am on April 5, 1991, onboard the space shuttle Atlantis. The mission was led by Commander Steven Nagel. The crew was Pilot Kenneth Cameron and Mission Specialists Jerry Ross, Jay Apt, and Linda Godwing. This videotape shows the crew having breakfast on the launch day, with the narrator introducing them. It then shows the crew's final preparations and the entry into the shuttle, while the narrator gives information about each of the crew members. The countdown and launch is shown including the shuttle separation from the solid rocket boosters. The launch is reshown from 17 different camera views. Some of the other camera views were in black and white.

During day 5 Endeavour gathers data four times faster than its advanced data communications system can send it to Earth. Pilot Dom Gorie and Mission Specialists Janice Voss and Mamoru Mohri transmit television coverage of Voss using an inflatable globe to explain the mapping of Earth land surfaces. Mohri is shown taking photos out the commander's window, while Gorie is changing a tape on a payload high rate recorder. Mapping operations continued smoothly, with both radar and orbiter systems working flawlessly.

Live footage shows the crewmembers of STS-96, Commander Kent V. Rominger, Pilot Rick D. Husband, Mission Specialists Ellen Ochoa, Tamara E. Jernigan, Daniel T. Barry, Julie Payette and Valery Ivanovich Tokarev during various training activities. Scenes include astronaut suit-up, EVA training in the Virtual Reality Lab, Orbiter space vision training, bailout training, and crew photo session. Footage also shows individual crew interviews, repair activities to the external fuel tank, and Discovery's return to the launch pad. The engineers are seen sanding, bending, and painting the foam used in repairing the tank. An animation of the deployment of the STARSHINE satellite, International Space Station, and the STS-96 Mission is presented. Footage shows the students from Edgar Allen Poe Middle School sanding, polishing, and inspecting the mirrors for the STARSHINE satellite. Live footage also includes students from St. Michael the Archangel School wearing bunny suits and entering the clean room at Goddard Space Flight Center.

This NASA Kennedy Space Center (KSC) video release presents a Johnson Space Center (JSC) press conference featuring Chuck Shaw, Lead Flight Director discussing the STS-37 Atlantis shuttle mission. Topics presented include overall mission objectives, flight crew, flight directors, primary payload (Gamma Ray Observatory (GRO)), Extravehicular Activities (EVA) Development Flight Experiment (EDFE), secondary payloads, Development Test Objectives (DTO's), Detailed Supplementary Objectives (DSO's), and flight day activities. Certain flight day activities including the Gamma Ray Observatory deployment and EVA movements and translations are presented as computerized simulations. The video ends with a summary of the key points of STS-37 and a question and answer period with questions posed from Johnson as well as other NASA centers. Questions include topics involving EVA safety, emergency EVA's, and what determines the day of primary payload deployment.

STS-99 Crew Activities Report / Flight Day 11 Highlights

Feb. 21, 2000; In English; Videotape: 19 min. 6 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000022261; BRF-1421K; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (STRM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface.. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. The mission was led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, the National Space Development Agency (Japanese Space Agency) and Gerhard P. J. Thiele, from DARA (German Space Agency). The astronauts finished the mapping operations early on day 11, and then retracted the 200 foot long mast into its payload bay canister. The mast, the longest rigid structure ever deployed in space, supported the external antenna during the mapping operation. The videotape shows the mast folding into the canister. The final stowage was delayed when the three latches on the lid of the canister failed to engage as expected. After a few procedures were executed the mast canister was sealed, on the third attempt, as shown on the videotape. The video also contains several views from the STRM. They include a computerized animation of a flight from Pasadena to Palmdale, a still view of Fiji, a view of the San Francisco Bay Area, and another of Pasadena.

STS-99 Crew Activities Report / Flight Day 06 Highlights

Feb. 16, 2000; In English; Videotape: 25 min. 5 sec. playing time, in color, with sound

Report No(s): BRF-1421F; NONP-NASA-VT-2000022120; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (STRM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface.. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. The mission was led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, the National Space Development Agency (Japanese Space Agency) and Gerhard P. J. Thiele, from DARA (German Space Agency). This tape shows some of the activities on board the shuttle during day six of the mission. By the end of day six, the mission to map 32 million square miles of the Earth's surface was about 67.2 percent complete. On this video tape there is discussion about the attempts to conserve propellant, to allow for the completion of the planned mapping. There is discussion by Mamoru Mohri about the mission, and Gerhard Thiele answers questions from the German Press about the mission. New radar images from the SRTM of the Kamchatka Peninsula and northwestern Mongolia are shown. There are shots of Endeavour's 200-foot mast, which required troubleshooting due to a balky small thruster.

Live footage shows the Blue Team of STS-99, Pilot Dominic L. Pudwill Gorie, and Mission Specialists Mamoru Mohri and Janet E. Voss, participating in a discussion with the Launch Control Center (LCC). Gorie and Mohri are also seen speaking with the Prime Minister of Japan. The Blue Team also answers questions from students. Footage also includes various shots of the mass hanging from the shuttle, the star tracker, the X- and C-band panels on the shuttle, and the dumping of water from the shuttle. Still shots of the (Shuttle Radar Topography Mission) SRTM Coverage Map are also presented. Places shown include the San Andreas Fault, San Gabriel Mountains, Simi Valley, Las Angeles, New Zealand, New Mexico, and Hokkaido Japan.

Report No(s): NONP-NASA-VT-2000008136; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Live footage of the (Terminal Countdown Demonstration Test) TCDT shows the crew of STS-88, Commander Robert D. Cabana, Pilot Frederick W. Sturckow, and Mission Specialists Nancy J. Curry, Jerry L. Ross, James H. Newman, and Sergei K. Krikalev, participating in a press conference. The moderator Bruce Buckingham is seen introducing Bob Cabana, who then introduces the rest of the crewmembers. Cabana explains the mission and addresses the flight day activities. He includes the building of the Node 1 station element to the Functional Energy Block (FGB) which will already be in orbit, and two space-walks to connect power and data transmission cables. The crewmembers took turn answering questions from both the audience and via radio communication with the Johnson Space Center.

This video shows a press briefing, reviewing the type of information which scientist hope to get from the Chandra X-ray Telescope. The telescope is scheduled to be launched during the STS-93 flight. The participants in the briefing are: Don Savage, of NASA Headquarters; Ed Weiler, Associate Administrator for Space Sciences; Alan Bunner, Chandra Project Scientist and Michael Turner, an astrophysicist at the University of Chicago. After the introduction by Mr. Savage, the broad scientific goals of the Chandra mission are reviewed by Dr. Weiler. This is followed by an acknowledgement of many of the people who participated in the development of the Chandra Telescope. This is followed by a discussion of the astrophysics and the information which the telescope should provide. Mrs. Chandrasekhar, the widow of Subrahmanyan Chandrasekhar, was in the audience. She was introduced and spoke briefly about the late Nobel Laureate astrophysicist.

This radar system produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. and led by Commander Kevin

Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri from the National Space Development Agency (Japanese Space Agency), and Gerhard P. J. Thiele from DARA (German Space Agency). This tape shows the activities of the tenth day of the mission. During this day the mapping of the Earth continued. Each of the astronauts gives a brief statement about the mission or some other point of interest. Some of the equipment and supplies on board the shuttle are shown, including the medical supplies. The videotape ends showing some of the images released during the day from the SRTM. These include views of Oahu, Hawaii; Miquelon Island and St. Pierre Island, Newfoundland; Kamchatka, and Baikal, Russia; Oberpfaffenhofen, Germany; Katmandu, Nepal; and Cotopaxi, Ecuador.

STS-99 Flight Day 04 Highlights and Crew Activities Report
Feb. 14, 2000; In English; Videotape: 26 min. 18 sec. playing time, in color, with sound
Report No(s): BRF-1421D; NONP-NASA-VT-2000022123; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. and led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri from the National Space Development Agency (Japanese Space Agency), and Gerhard P. J. Thiele from DARA (German Space Agency).On the fourth day of the mission the blue team's Dominic Gorie led off the day's tape with a brief memorial to Charles Schultz, as he spoke of some of the vessels that were named for characters in Peanuts, and called to mind the Silver Snoopy, one of the highest awards NASA bestows. Janice Voss answered a couple of questions sent over the internet about a problem with a small thruster on the end of the 200 foot long mast. Mamoru Mohri talks about the EarthKam. Gerhard Thiele and Janet Kavandi describe the process of achieving the digital map of the entire world. At the end of the videotape some of the recently released views from the SRTM are shown. These include shots of the South Island of New Zealand.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour, and led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri from the National Space Development Agency (Japanese Space Agency), and Gerhard P. J. Thiele from DARA (German Space Agency). This tape shows the activities of the ninth day of the mission. The announcement of the decision to extend the SRTM for 9 hours is made to the crew. This means that almost all (i.e., 99.9 %) of the target area of the Earth will be imaged, at least once. Some shots of the 200 foot long mast where the outboard antennas are located are shown. Mamoru Mohri is shown changing a data tape, while he explains the rationale for recording rather than transmitting the data. Gerhard Thiele speaks to the German press. At the end of this tape are images generated from the SRTM. There are views of Oahu, Molokai, Lanai and west Maui, Hawaii; Dallas, Texas; Salalah, Oman; and Tasmania, Australia. Animations showing the topography around Hokkaido, Japan and Brazil are also shown.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. This tape presents a pre-launch briefing for the press held on Feb 8, 2000. Statements were given by Doug Lyons, Shuttle Test Director; Scott Higginbotham, STS-99 Payload Director and Ed Priselac, Shuttle Weather Officer. Mr. Lyons reported on the replacement of the Master Control Unit on board Endeavour, the part that had caused a delay in the launch. He reviewed the work that had to be done and the timeline for completion. Scott Higginbotham reported that there were no problems with the SRTM. Ed Priselac reported on favorable weather conditions for the launch. Discussion after the statements concerned a possible problem with a cable, and the possibility of a further delay to the launch.

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system that will produced unrivaled 3-D images of the Earth's Surface. The mission was launched at 12:31 on February 11, 2000 onboard the space shuttle Endeavour. The mission was led by Commander Kevin Kregel. The crew was Pilot Dominic L. Pudwill Gorie and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, the National Space Development Agency (Japanese Space Agency) and Gerhard P. J. Thiele, from DARA (German Space Agency). The shuttle landed at Kennedy on the February 22, 2000 at 5:22 CST. This tape shows a post landing press conference with the crew. Commander Kregel made a brief statement praising the crew for the mission's success and then introduced the crewmembers. The crew answered questions about the retraction of the mast. The retraction had been successful, but the latches to the canister had failed. The extreme cold may have caused the problem and a solution was proposed from ground control. If this had not worked, an EVA would have been required. The astronauts were confident in the solution to the problem, however they were ready to perform any required EVA. Mamoru Mohri answered questions from the Japanese press, speaking in English and Japanese.

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC

Jan. 21, 2000; In English; Videotape: 1 hr. 24 min. 10 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000025574; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM), a specially modified radar system. This radar system produced unrivaled 3-D images of the Earth's Surface. This videotape shows a science press briefing. The panel members are Michael Kobrick, the SRTM Project Scientist at JPL; Thomas Henning, SRTM Program Manager at the National Imagery and Mapping Agency; Diane Evans, the Director of the Earth Sciences Program at NASA; and Marian Werner, XSAR Project Manager for the DLR, Deutschen Zentrum fur Luft- und Raumfahrt, Germany's National Aerospace Research Center. Michael Kobrick explained the mechanics of interferometric measurements of the Earth. He explained and demonstrated with a scale model the deployable mast's use. He also explained the importance of the attitude and orbit determination avionics. A brief animated video showing how four beams would give a 225 km wide swath of the Earth topography was viewed. Thomas Henning discussed some of the usage of the digital terrain elevation data for flood relief planning, cell phone station placement, military planning for command and control centers, and flight simulation. He explained that public access to the most precise data would be limited. Diane Evans described data usage in flood prediction, earthquake fault identification and archeology. Marian Werner described the German and Italian input to the project. The questions from the press concerned the time to process this data, and the reasons for the limited access to the more precise data.

STS-99 / Endeavour Mission Overview

Jan. 30, 2000; In English; Videotape: 1 hr. 7 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000025572; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The primary objective of the STS-99 mission was to complete high resolution mapping of large sections of the Earth's surface using the Shuttle Radar Topography Mission (SRTM). This radar system will produce unrivaled 3-D images of the Earth's Surface. This videotape presents a mission overview press briefing. The panel members are Dr. Ghassem

Asrar, NASA Associate Administrator Earth Sciences; General James C. King, Director National Imagery and Mapping Agency (NIMA); Professor Achim Bachem, Member of the Executive Board, Deutschen Zentrum fur Luft- und Raumfahrt (DLR), the German National Aerospace Research Center; and Professor Sergio Deiulio, President of the Italian Space Agency. Dr. Asrar opened with a summary of the history of Earth Observations from space, relating the SRTM to this history. This mission, due to cost and complexity, required partnership with other agencies and nations, and the active participation of the astronauts. General King spoke to the expectations of NIMA, and the use of the Synthetic Aperture Radar to produce the high resolution topographic images. Dr. Achim Bachem spoke about the international cooperation that this mission required, and some of the commercial applications and companies that will use this data. Dr Deiulio spoke of future plans to improve knowledge of the Earth using satellites. Questions from the press concerned use of the information for military actions, the reason for the restriction on access to the higher resolution data, the mechanism to acquire that data for scientific research, and the cost sharing from the mission's partners. There was also discussion about the mission's length.

STS-99 Countdown Status Briefing
Jan. 30, 2000; In English; Videotape: 18 min. 16 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000025579; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

After an introduction by Bruce Buckingham (NASA Public Affairs), participants Jeff Spaulding (NASA Test Director, Scott Higginbotham (STS-99 Payload Manager), and Ed Priselac (Shuttle Weather Officer) proceed with the countdown status briefing. They expressed that the opening countdown was proceeding well and servicing of the cryotanks was completed. The launch pad closeouts continued and the tanking process was in order. There was a card failure in the data handling processor, so a backup system was used.

STS-103 Mission Highlights Resource Tape (1 of 2)
Mar. 01, 2000; In English; Videotape: 1 hr. 29 min. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000036030; JSC-1814; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The STS-103 flight crew, Commander Curtis L. Brown, Pilot Scott J. Kelly, Mission Specialists Steven L. Smith, C. Michael Foale, John M. Grunsfeld, Claude Nicollier, and Jean-Francois Clervoy, are seen performing pre-launch activities such as crew suit-up, and ride out to the launch pad for a night launch. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the White Room for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters. Once on-orbit the primary objective is to capture and service the Hubble Space Telescope. Included are various live shots of the payload bay showing the flight support system, the orbiter replacement unit carrier and the forward fixture that house the new Fine Guidance System (FGS). Smith and Grunsfeld replaces and changes the sensor units during the first space walk of this mission. The second space walk by Nicollier and Foale includes the changing of the computer and installation of the FGS. This is tape 1 of 2, tape 2 has a report number of NONP-NASA-VT-2000036031.

STS-71/Mir/Spacelab Landing at KSC
Jul. 07, 1995; In English; Videotape: 57 min. 27 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000036562; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Live footage of various day landing views of the Spacecraft Atlantis are shown from different camera sites. Also shown is the re-entry and day landing of the spacecraft at Kennedy Space Center. Footage also includes touchdown, drag chute deployment, nose gear touchdown, and the ground recovery crew as they travel to the spacecraft. Atlantis crew, Commander Robert L. Gibson, Pilot Charles J. Precourt, Mission Specialists Ellen S. Baker, Bonnie J. Dunbar, Gregory J. Harbaugh, and the download crew from MIR-18 Norman E. Thagard, Vladimir Dezhurov, and Gennadiy Strekalov are also seen leaving the craft. Included is a phone conversation between President Clinton and the crew.

STS-103 Mission Highlights Resource Tape (2 of 2)

Mar. 01, 2000; In English; Videotape: 58 min. 36 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000036031; JSC-1814; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The STS-103 flight crew, Commander Curtis L. Brown, Pilot Scott J. Kelly, Mission Specialists Steven L. Smith, C. Michael Foale, John M. Grunsfeld, Claude Nicollier, and Jean-Francois Clervoy, are seen passing over the Yucatan and Florida Peninsulas. Smith and Grunsfeld replace and change the S-band single transmission cables during the third and final space walk of this mission. Crewmembers are also seen taking video documentation of the solar arrays. Footage presented includes the release of the Hubble Space Telescope, thruster firing and orbit adjust burn over the Central Indian Ocean and Australia. Also shown is the night landing of Discovery at Kennedy Space Center, crew departure from the vehicle, and short statements made by the crew. This is tape 2 of 2; tape 1

STS-30 Launch Highlights and Continuous Record from T-9 Mins.
19890428; In English; Videotape: 36 min. 34 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000036565; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The primary objective of the STS-30 mission was to deploy the Magellan/Venus radar mapper spacecraft and attached Inertial Upper Stage (IUS). The commander of the mission was David M. Walker. The crew was pilot, Ronald J. Grabe, and mission specialists, Norman E. Thagard, Mary L. Cleave, and Mark C. Lee. The mission was launched on May 4, 1989, after the April 28 launch attempt was scrubbed due to a problem with a liquid hydrogen recirculation pump on the number one main engine and a vapor leak in the four-inch liquid hydrogen recirculation line between the orbiter and the external tank. This videotape shows the crew breakfast on April 28, and the final preparations for launch. It also shows the crew boarding the shuttle. After the countdown is halted at T-31 seconds the crew leaves the orbiter.

Live footage shows Ron Dittemore, the Shuttle Program Manager from Johnson Space Center (JSC), participating in a Launch Postponement Press Conference disclosing the status of the STS-99 flight. He addresses the weather condition which caused the postponement and the erroneous response from one of the Master Events Controllers (MEC). The moderator of this conference is Bruce Buckingham from NASA's Public Affairs Office. Ron answers questions from the audience about the MEC responsible for sending commands for launch, and the implications that it might have on the launch schedule.

STS-101 Crew Interview / Scott Horowitz
Mar. 20, 2000; In English; Videotape: 38 min. 22 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000039860; JSC-1809B; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Live footage of a preflight interview with Pilot Scott J. Horowitz is seen. The interview addresses many different questions including why Horowitz became an astronaut, the events that led to his interest, any role models that he had, and his inspiration. Other interesting information that this one-on-one interview discusses is the reaction and reasons for the splitting-up of the objectives for STS-101 with STS-106. Horowitz also mentions the scheduled space-walk, docking with the International Space Station (ISS), the new glass cockpit of Atlantis, the repairs of equipment and change of the batteries. Horowitz also discusses his responsibilities during the space-walk, and docking of the spacecraft. He stresses that he will have an added challenge during the space-walk, his inability to see where he needs to place the Extravehicular Activities (EVA) crew.

STS-31 Mission Highlights Resource Tape, Part 1
Jun. 01, 1999; In English; Videotape: 55 min. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000039772; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The primary objective of mission STS-31 was to deploy the Hubble Space Telescope. The commander of the mission was Loren J. Shriver. The crew was pilot Charles F. Bolden, and Mission Specialists, Steven A. Hawley, Bruce McCandless II, and Kathryn D. Sullivan. The mission was launched on April 24, 1990. This videotape shows the astronauts at their pre-launch breakfast, their final preparations for launch and boarding the Shuttle Discovery. It shows the launch and the detachment of the rocket boosters. It shows the deployment of

the Hubble Telescope and the unfurling of its Solar Arrays. Other payloads include the Protein Crystal Growth (PCG) experiment, and the Radiation Monitoring Equipment III, to measure gamma ray levels in the crew cabin. The videotape shows many shots of the Kennedy Mission Control room and the shuttle cockpit. The videotape finally shows the landing at Edwards Air Force Base, and the crew disembarking the shuttle.

STS-31: Hubble HST Science
Apr. 08, 1990; In English; Videotape: 42 min. 45 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-200039780; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The primary objective of STS-31 was to deploy the Hubble Space Telescope(HST). This videotape presents a press briefing about the scientific goals of the HST program. The panel members were Dr. Weiler, HST program scientist; Dr. Boggess from NASA Goddard, the Center managing the HST Program; and Dr. Bahcall, President Elect of the American Astronomical Union. Dr. Weiler opened the panel discussion by introducing other HST scientists who were in the audience. Dr. Bahcall explained the four major areas that astronomers hope to better understand using the HST data: (1) The size and age of the universe; (2) quasars as flashlights to understanding other features of the universe; (3) planets around other stars; and (4) weather on the other planets of our Solar System. Other areas in which he hopes to have some understanding are galaxies under quasars, black holes, and missing matter. After his remarks, Dr. Bahcall presented a plaque to Charles Pellerin, who helped initiate the series of astrophysics telescopes. The HST is the first of these 'Great Observatories'. After the presentation, questions from the press were answered.

STS-32: LDEF Move from SAEF II to Hanger 'C' CCAFS
May 14, 1990; In English; Videotape: 9 min. playing time, in color, no sound
Report No(s): NONP-NASA-VT-2000039779; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

One of the primary objectives of STS-32 was to retrieve the Long Duration Exposure Facility (LDEF) from space. The LDEF was designed to provide long-term data on the space

environment and its effects on space systems and operations. This videotape shows the LDEF being moved from the Spacecraft Assembly and Encapsulation Facility to Hanger C in the Cape Canaveral Air Force Station after it had been retrieved from space. There are many views of the environment around the Kennedy Space Facility.

The primary objective of STS-34 was to launch Galileo on its trip to Jupiter. The Galileo spacecraft contains two Radioisotope Thermoelectric Generators (RTG), which contains plutonium. This videotape shows and the accompanying material explains the tests that the RTG containment vessel has been subjected to, and the results of the tests. The videotape shows the trajectory of the Galileo spacecraft, a cutaway view of an RTG, the Plutonium-238 fuel capsule, and seven of the tests on the RTG.

STS-99: Post Flight Presentation
Apr. 03, 2000; In English; Videotape: 15 min. 13 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000043499; JSC-1819; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

Live footage shows the crewmembers of STS-99, Commander Kevin R. Kregel, Pilot Dominic L. Pudwill Gorie, and Mission Specialists Janet L. Kavandi, Janice E. Voss, Mamoru Mohri, and Gerhard P.J. Thiele, arriving at Kennedy Space Center (KSC) in the T-38 aircraft. Crewmembers are seen speaking to the welcoming crowd at KSC, suiting-up, walking out to the Astro-van, being strapped in the shuttle, and performing various activities while in orbit. Scenes include the astronaut training process, main engine ignition, liftoff, solid rocket booster separation, mast deployment and retraction, and the changing of the mapping tapes. Footage also includes the crewmembers sleeping, eating, exercising, dancing and having fun in zero gravity. The High Definition Television Camera (HDTV) picks up images from the Earth. These images includes Bolivia, Paraguay, Brazil, Bahamas, Mauritania, Saudi Arabia, Mount Fuji, Tokyo Bay, Southern Russia, the Black Sea, Equador, Northern Peru, the Mediterranean Sea, Malta, Sicily and Italy. The crewmembers of STS-99 each took a turn to narrate the scenes and events as they occur.

Live footage of a preflight interview with Mission Specialist Yuri Vladimirovich Usachev is seen. The interview addresses many different questions including why Usachev became a cosmonaut, the individuals who influenced him, and the events that led to his interest. Other interesting information that this one-on-one interview discusses is his reaction and integration into the STS-101 crew. Usachev also mentions the scheduled space-walk of James S. Voss and Jeffrey N. Williams, his feeling once he steps into the International Space Station (ISS), the repairs of equipment, his handling of the hand held laser, and the change of the batteries.

Report No(s): NONP-NASA-VT-2000039778; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This video presents a post-launch press conference on the STS-31 Hubble Space Telescope. Dick Young, Kennedy Space Center Public Affairs, introduces the panel. The panel consists of Robert Sieck, Kennedy Space Center Launch Director, and George T. Sassen, Director Shuttle Engineer. The STS-31 launch was accomplished with very few problems. Terminal count was started and then stopped at 31 seconds because the software sensed that a valve was not positioned correctly. The valve was positioned correctly, the count was resumed, and the launch was carried out safely and successfully. George T. Sassen explains, in detail, how the problem was corrected.

The primary objective of the STS-35 mission was the round-the-clock observations of the celestial sphere in ultraviolet and X ray astronomy with ASTRO-1. The mission was commanded by Vance D. Brand. The crew consisted of the pilot Guy S. Gardner, mission Specialists Jeffery Hoffman, John Lounge, and Robert Parker, and payload specialists Samuel Durrance, and Ronald Parise. This videotape opens with a view of the shuttle on the pad at night in preparation for a night launch. The astronauts are introduced as they finish their pre-launch breakfast. The next shots are those of the astronauts getting into their spacesuits, and boarding the bus to be taken to the pad. The astronauts are next shown climbing into the shuttle. The launch of the shuttle is shown from 19 different camera angles.

Mars Surveyor '98 Animation From JPL
Jun. 16, 1997; In English; Videotape: 19 min. 40 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000010563; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This video presents live animation of the Mars Surveyor Program. NASA is looking for faster, better, cheaper missions to Mars since the Mars Observer malfunctioned on August 22, 1993. Daniel Goldin, NASA Administrator says that NASA will perform flyby missions, orbiters, landers, and sample returns to look for evidence of life on Mars. The first mission to Mars, the Mars Global Surveyor, was launched on November 7, 1996, to provide geological, topographical, and atmospheric maps from its polar orbit about Mars. The second, the Mars Pathfinder, launched on December 4, 1996, photographs terrain, monitors weather and deploys a robotic rover that analyzes samples of Mars' rocks and soils. The third, the Mars Surveyor '98, includes two separate, launched spacecraft, the orbiter and the lander. The Orbiter was launched December 98 from Cape Canaveral. Its 9-month journey to Mars will circle the planet every two hours and once stability was achieved, will configure itself for mapping. On January 3, 1999, the lander was on an 11-month journey to Mars, scheduled to arrive on Mars on December 3, 1999 to record the geological composition of the landing site from its SSI (Surface Stereo Imager).

The objective of STS-101 will be the servicing of the International Space Station, to ensure that it will be ready to receive a crew later in 2000. The crew, commanded by James D. Halsell, will include Pilot Scott J. Horowitz, Mission Specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms and Yuri V. Usachev. This videotape provides live coverage of an interview with the mission commander Jim Halsell. He describes the influences on his life that led him to become a NASA astronaut, and the importance of the mission. He discusses the new glass cockpit design. He describes the flight plan and the docking maneuver. An important feature of this mission is the replacement of electric components, voltage and current regulators on the space station. Commander Halsell also describes the role of each crew member during the re-supply and refitting of the Space Station and reviews the priorities.

The primary mission objective for STS-101 was to deliver supplies to the International Space Station, perform a space walk, and reboost the station from 230 statute miles to 250 statute miles. The commander of this mission was, James D. Haslsell. The crew was Scott J. Horowitz, the pilot, and mission specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev. This videotape shows the activities of the second day of the flight. On this day the shuttle crew checked the equipment in preparation for rendezvous with the International Space Station. This video shows the astronauts entering the SpaceHab, where the supplies bound for the space station are

stored. There are also views of the robotic arm, which will be used during the spacewalk to maneuver Williams and Voss between Atlantis and the station.

The primary mission objective for STS-101 was to deliver supplies to the International Space Station, perform a space walk, and reboost the station from 230 statute miles to 250 statute miles. The commander of this mission was, James D. Halsell. The crew was Scott J. Horowitz, the pilot, and mission specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev. This videotape shows the launch of STS-101, beginning with the pre-flight breakfast and the crew's introduction. The videotape next shows a pre-dawn view of the orbiter waiting the crew's arrival. The crew is shown getting into their space suits and then climbing onboard the shuttle. In this videotape we are shown a few of the crew getting into their places onboard the shuttle. We are also shown the newly designed 'glass cockpit', which gives the pilot and the commander better views and are told that this is the first flight of the shuttle with the new design. After the hatch is closed, we see the shuttle launch into the night, followed by the Solid Rocket Boosters (SRB) separation.

The primary mission objective for STS-101 was to deliver supplies to the International Space Station, perform a space walk, and reboost the station from 230 statute miles to 250 statute miles. The commander of this mission was James D. Halsell. The crew was Scott J. Horowitz, the pilot, and mission specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev. This videotape is a press briefing by Scott Bleisath, STS-101 Lead EVA Officer, about the planned Extravehicular Activity planned for the fourth day of the mission. The work that this EVA is to accomplish is the repair of a crane and the installation of a beam on Unity. The astronauts will also replace antennae and install hand rails and cables. The astronauts who are scheduled to perform the EVA activities are Williams and Voss. They will be assisted by Weber, who will operate the Shuttle's robotic arm, and Scott Horowitz. The spacewalk is scheduled to take 6 hours. The videotape includes some views of the astronauts training in an underwater environment. Mr. Bleisath answered questions from the press after he completed the briefing.

Delta/Wind Launch

November 1, 1994; In English; Videotape: 1 hr. 2 min. 34 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078316; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This NASA Kennedy Space Center (KSC) video release presents live footage of the successful Delta II/WIND spacecraft launch from Pad 17B at the Eastern Test Range, Cape Canaveral Air Station, FL. Footage of engineering activity from launch control as well as narrative information concerning spacecraft configuration, equipment, instruments and objectives is also presented. WIND is the first of two NASA spacecraft in the Global Geospace Science initiative and part of the ISTP Project. WIND is positioned in a sunward, multiple double-lunar swingby orbit with a maximum apogee of 250Re during the first two years of operation. This will be followed by a halo orbit at the Earth-Sun L1 point. The main scientific objectives of the WIND mission are to provide complete plasma, energetic particle, and magnetic field input for magnetospheric and ionospheric studies. The WIND spacecraft includes KONUS, the first Russian instrument to fly on an American satellite since civil space cooperation between the U.S. and Russia was resumed in 1987.

Delta/Wind Launch with Isolated Cameras from Continuous Recording

Nov. 01, 1994; In English; Videotape: 38 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078317; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The Wind spacecraft represents one of NASA's contributions to the International Solar Terrestrial Program (ISTP), an international effort to quantify the effects of solar energy on the Earth's magnetic field. Wind will provide continuous measurement of the solar wind, particularly charged particles and magnetic field data. The specific objectives of Wind are to: (1) provide complete plasma, energetic particle, and magnetic field input for magnetospheric and ionospheric studies; (2) determine the magnetospheric output to interplanetary space in the upstream region; (3) investigate basic plasma processes occurring in the near-Earth solar wind; and (4) provide baseline ecliptic plane observations to be used in heliospheric studies. This videotape shows the pre-dawn launch of the Wind spacecraft aboard a Delta 7925 on November 1, 1994. After the countdown and launch, the tape shows the activity in the Telemetry Room at Kennedy Space Center, where people are following the progress of the spacecraft. Following the activity in the telemetry room, there are four different replays of the launch from different locations. After showing the replays of the launch, the video returns to the Telemetry Room when an important stage in the launch and flight is achieved.

STS-101: Atlantis Orbiter Upgrade Briefing

Mar. 27, 2000; In English; Videotape: 54 min. 45 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000076142; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Live footage shows panelists, Manager of the Space Shuttle Program Development, Elric McHenry, and the Associate Program Manager for Space Shuttle Upgrades, Andy Allen, giving an overview of the new upgrades on the STS-101 Orbiter. McHenry and Allen speaks about the changes and modernization of Atlantis. The panelists' mentions all the new capabilities of the new glass cockpit. They emphasize the redesign of the engine, specifically, the ability to shut down automatically. They also discuss future implementation of a smart cockpit.

STS 101: Post Flight Presentation

Jun. 21, 2000; In English; Videotape: 15 min. 7 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000087291; JSC-1827; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The crew (Mission Commander James D. Halsell, Jr., Pilot Scott J. Horowitz, and Mission Specialists Mary Ellen Weber, Jeffrey N. Williams, James S. Voss, Susan J. Helms, and Yuri Vladimirovich Usachev) describe the highlights of the STS 101 Mission. The primary scenes reviewed include the spacewalk, incremental assembly/upgrades, space station rendevous, suit testing, critical replacement and repairs to suspect batteries, and reboosting the station from 230 statute miles to 250 statute miles.

STS-106 Crew Interviews: Scott D. Altman
Jul. 19, 2000; In English; Videotape: 30 min. 10 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000111953; JSC-1822B; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Live footage of a preflight interview with Pilot Scott D. Altman is seen. The interview addresses many different questions including why Altman became a pilot, the events that led to his interest, his career path through the Navy, and then finally, his selection by NASA as an astronaut. Other interesting information discussed in this one-on-one interview was his work on the movie set of 'Top Gun,' the highlights of his Navy career, and possible shorter time frame turnarounds for missions. Altman also mentions the scheduled docking with the new International Space Station (ISS) after the arrival of the Zvezda Service Module.

Orbiter Umbilical Hinge Door Problem
Feb. 19, 1991; In English; Videotape: 4 min. 14 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000113527; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

During processing work on the orbiter Discovery at Pad A, significant cracks were found on all four lug hinges on the two external tank umbilical door drive mechanisms. NASA managers opted to roll back the vehicle to the Vehicle Assembly Building (VAB) on March 7, and then to the Orbiter Processing Facility (OPF) for repair. Hinges were replaced with units taken from orbiter COLUMBIA, and reinforced. Discovery returned to the pad on April 1. Shown are the cracked orbiter umbilical door hinges.

STS-39: Landing at KSC
May 06, 1991; In English; Videotape: 55 min. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000118018; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The Space Shuttle Discovery landed on May 6, 1991, 2:55:35 p.m. EDT at the Shuttle Landing Facility after traveling more than 3,500,000 miles on a successful eight-day mission. Rollout distance and time were 9,235 feet and 56 secs respectively. The landing weight was 211,512 lbs. Landing was diverted to KSC because of unacceptably high winds at the planned landing site, Edwards Air Force Base, California. Aboard were: Commander Michael L. Coats; Pilot L. Blaine Hammond, Jr.; and Mission Specialists Guion S. Bluford Jr., Gregory J. Harbaugh, Richard J. Hieb, Donald R. McMonagle, and Charles L. Veach. This was the 40th flight in the Space Shuttle program and the 12th for the orbiter Discovery. The landing was the 7th Shuttle landing in Florida. After landing at the Shuttle Landing Facility, the STS-39 crew posed for a photo in front of Discovery.

A press briefing is presented by Admiral Richard Truly about the STS-42 Discovery International Microgravity Laboratory-1 (IML). He describes the launch that took place on the morning of January 22, 1992. It was NASA's first launch of 1992 following the Challenger disaster. Life Sciences and materials science microgravity experiments were flown on the STS-42 to study the behavior of materials and living things in microgravity. The briefing ends with a short question and answer period.

STS-106 was launched on Sept 8, 2000 at 8:45 a.m. The crew was commanded by Terrence W. Wilcutt, the pilot was Scott D. Altman. The mission specialists were Daniel C. Burbank, Edward T. Lu, Richard A. Mastracchio, Yuri Ivanovich Malenchenko, and Boris V. Morukov. During the 11-day mission, the crew spent a week inside the International Space Station (ISS) unloading supplies from both a double SPACEHAB cargo module in the rear of the Atlantis cargo bay and from a Russian Progress M-1 resupply craft docked to the aft end of the Zvezda Service Module. The videotape shows the activities of the second day of the flight and the preparations for docking with the ISS. Shown on the video are shots of the flight deck on the shuttle, the shuttle payload arm, and shots of the crew eating lunch.

On this first day of the STS-106 Atlantis mission, the flight crew, Commander Terrence W. Wilcutt, Pilot Scott D. Altman, and Mission Specialists Daniel C. Burbank, Edward T. Lu, Richard A. Mastracchio, Yuri Ivanovich Malenchenko, and Boris V. Morukov are seen performing pre-launch activities. They are shown sitting around the breakfast table with the traditional cake, suiting-up, and riding out to the launch pad. The final inspection team is seen as they conduct their final check of the space shuttle on the launch complex. Also, included are various panoramic views of the shuttle on the pad. The crew is readied in the 'white room' for their mission. After the closing of the hatch and arm retraction, launch activities are shown including countdown, engine ignition, launch, and the separation of the Solid Rocket Boosters.

STS-106 Crew Activity Report/Flight Day 8 Highlights
Sep. 15, 2000; In English; Videotape: 20 min. 8 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000136107; BRF 1423H; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this eighth day of the STS-106 Atlantis mission, the flight crew, Commander Terrence W. Wilcutt, Pilot Scott T. Altman, and Mission Specialists Daniel C. Burbank, Edward T. Lu, Richard A. Mastracchio, Yuri Ivanovich Malenchenko, and Boris V. Morukov move into the second half of preparing the International Space Station (ISS) for its first resident crew. Lu and Malenchenko are seen installing the power converters in the Zvezda module and components of the primary oxygen generation system. Mastracchio and Wilcutt moves supplies and logistics from the payload of Atlantis to the ISS. Wilcutt and Altman participate in several interviews and the crew wishes the Olympiads in Sydney good luck in their endeavors. Scenes also include external views of the ISS and images of Earth, including Sydney, Australia.

A panel of scientists give an overview of the experiments that are to take place on-board the STS-42 Discovery mission. Ronald J. White, International Microgravity Laboratory (IML) Program Scientist, gives a general description of why going into space with IML is so important. Robert Snyder, IML Mission Scientist, describes other aspects of the microgravity environment. Millard Reschke, Principal Investigator (PI) Microgravity Vestibular Investigation (MVI), explains what MVI is and the effects of space on the vestibular system. David Heathcote, PI for the Gravitational Plant Physiology Facility (GPPF), describes the GPPF's on-board experiment involving the effects of light and gravity on plants. Claude Brillouet, Program Scientist of the Biorack Facility, gives an overview of the Biorack equipment and experiment. Alan Mortimer, Chief Life Sciences for the Canadian Space Agency (CSA), describes

the on-board experiments for the long- and short-term effects of microgravity on humans and biotechnology (cell separation techniques). The men then answer questions from the press and NASA centers.

STS-106 Crew Activities Report/Flight Day 10 Highlights
Sep. 17, 2000; In English; Videotape: 18 min. 16 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000136104; BRF-1423J; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On this tenth day of the STS-106 Atlantis mission, the flight crew, Commander Commander Terrence W. Wilcutt, Pilot Scott D. Altman, and Mission Specialists Daniel C. Burbank, Edward T. Lu, Richard A. Mastracchio, Yuri Ivanovich Malenchenko, and Boris V. Morukov are shown preparing for their departure from the International Space Station (ISS). Crewmembers are shown closing the hatches of the Zarya, Unity and Zvezda modules. They are also shown packing up trash and packing materials into the Russian Progress ship.

STS-43 TCDT
Jul. 03, 1990; In English; Videotape: 62 min. 26 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000122920; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

Footage is seen of the simulated ignition of Atlantis' main engines up until about 30 seconds before ignition. The crew's activities of the days before are seen, including emerging from two T-38 aircraft cockpits, suiting up, and leaving for the pad. The Tracking and Data Relay Satellite (TDRS) is seen close-up in the test cell in the Vertical Processing Facility.

STS-97 Crew Interviews: Michael J. Bloomfield

Nov. 01, 2000; In English; Videotape: 38 min. 50 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000165429; BRF-1841B; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Live footage of a preflight interview with Pilot Michael J. Bloomfield is shown. The interview addresses many different questions including why Bloomfield became interested in the space program, the events and people that influence him and ultimately led to his interest, and his vigorous training in the astronaut program. Other interesting information that this one-on-one interview discusses are the main goals of the STS-97 mission, its scheduled docking with the new International Space Station (ISS), and its delivery of the first set of U.S.-provided solar arrays, batteries, and radiators. Bloomfield briefly discusses his responsibilities during the much-anticipated docking as well as during the scheduled space-walks.

STS-92 Preflight Briefings Video Feed and International Space Station Overview

Sep. 26, 2000; In English; Videotape: 71 min. 2 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001007190; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The first half of this video is a collection of video feeds from various preflight conferences and simulations show the payload bay and payload equipment. The International Space Station's (ISS) structure is seen, as are close-up shots of the Z-1 truss. Footage shows extravehicular activity (EVA) underwater training. The second half of the video is a preflight conference on the mission objectives concerning the ISS. Tommy Halloway, Manager, ISS Program, and Robert Cabana, ISS Manager for International Operations, discuss the STS-92 mission in terms of the ISS and the role of ISS in the future. Mr. Cabana gives the status of present and future ISS hardware.

The men then answer questions from the press.

STS-99 Mission Highlights Resource Tape, Part 1 of 2

Oct. 04, 2000; In English; Videotape: 87 min. 35 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000157334; JSC-1820; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

An overview of the STS-99 Endeavour mission is given through footage of each flight day. Scenes from flight days one through ten show activities such as astronaut prelaunch procedures (breakfast, suit-up, and boarding Endeavour), launch, and on-orbit activities such as the deployment of the Shuttle Radar Topography Mission (SRTM) instrument. Crewmembers are seeing during such everyday activities as brushing their teeth, exercising (bicycle), and emerging from their sleeping bunks. One of the crewmembers shows the contents of the onboard medical kit. See 'STS-99 Mission Highlights Resource Tape, Part 2 of 2' for the activities of flight days 11-12 and the landing of Endeavour.

Dick Young, NASA Public Affairs, introduces Brewster Shaw, Deputy Program Manager Space Shuttle, and Bob Sieck, Launch Director, Kennedy Space Center, who give brief statements about the countdown and launch of the STS-52 Columbia Orbiter. The problems encountered during countdown are discussed, including details on the hydrogen leak in the ground umbilical carrier tank, the 100% exceedance of load on the external tank, and the reasons why the flight rule for an upper limit of cross winds was waived. The men then answered questions from the press.

Footage of various stages of the STS-62 Columbia launch is shown, including shots of the crew at breakfast, getting suited up, and departing to board the Orbiter. The launch is seen from many vantage points, as is the landing. On-orbit activities show the crew performing medical experiments, such as using the Lower Body Negative Pressure unit, and during a demonstration of the effects of microgravity using M&Ms and marshmallows. The Gulf of Mexico and a hurricane are seen from the Orbiter.

John Shannon, STS-102 Lead Flight Director, Bernestine Dickey, STS-102 Launch Package Manager, and Rick La Brode, International Space Station (ISS) Lead Flight Director, give an overview of the STS-102 mission during a prelaunch press conference. Mr. Shannon discusses how the mission came into being and its objectives, including information on the launch and a day-by-day account of mission activities. Ms. Dickey gives details on the payload of STS-102, describing the system racks, cargo elements, and crew supplies delivered via the Leonardo Multi-Purpose Logistics Module. Mr. La Brode describes the current configuration of the ISS and upcoming changes. He also discusses the activities of the Expedition 2 crew during the next four months. Computer simulations show the ISS' current and future (after the STS-102 mission) configurations, the installations of Leonardo, and the move of the Pressurized Mating Adapter from one port to another on the

Destiny Laboratory. The panel then answers questions from the press.

Merri Sanchez, Expedition 2 Increment Manager, John Uri, Increment Scientist, and Lybrease Woodard, Lead Payload Operations Director, give an overview of the upcoming activities and objectives of the Expedition 2's (E2's) mission in this prelaunch press conference. Ms. Sanchez describes the crew rotation of Expedition 1 to E2, the timeline E2 will follow during their stay on the International Space Station (ISS), and the various flights going to the ISS and what each will bring to ISS. Mr. Uri gives details on the on-board experiments that will take place on the ISS in the fields of microgravity research, commercial, earth, life, and space sciences (such as radiation characterization, H-reflex, colloids formation and interaction, protein crystal growth, plant growth, fermentation in microgravity, etc.). He also gives details on the scientific facilities to be used (laboratory racks and equipment such as the human torso facsimile or 'phantom torso'). Ms. Woodard gives an overview of Marshall Flight Center's role in the mission. Computerized simulations show the installation of the Space Station Remote Manipulator System (SSRMS) onto the ISS and the installation of the airlock using SSRMS. Live footage shows the interior of the ISS, including crew living quarters, the Progress Module, and the Destiny Laboratory. The three then answer questions from the press.

STS-102 Extravehicular Activities Briefing
Feb. 28, 2001; In English; Videotape: 25 min. 15 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001052181; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Keith Johnson, STS-102 Lead Extravehicular Activities Officer, gives an overview of the mission's spacewalks in this prelaunch press conference. He describes the activities, objectives, and timeline of the spacewalks during the STS-102 mission. Computerized simulations show the move of the Third Pressurized Mating Adapter (PMA3) and the retrieval of the rigid umbilicals from the payload bay of Discovery. Mr. Johnson then answers questions from the press.

STS-102 Mission Highlight Resource Tape, Tape 1 of 4, Part A

Jun. 21, 2001; In English; Videotape: 1 hr. 30 min. 9 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001096942; JSC-1879; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This video gives an overview of the first four flight days of the STS-102 mission through a compilation of footage from each day. The crew of STS-102 (Commander James Wetherbee, Pilot James Kelly, and Mission Specialists Andrew Thomas and Paul Richards) and the Expedition 2 crew (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms) are seen during the ceremonial breakfast, suitup, and as they board Discovery. The orbiter's launch is seen from several different viewpoints, and various in-flight activities are shown, such as the opening of Discovery's payload bay doors, Helms preparing for the 'H-Reflex Experiment: Effects of Microgravity on the Spine', the rendezvous and docking of Discovery with the International Space Station (ISS), and Helms and Voss preparing for and performing their spacewalks. The crew of STS-102 and both Expedition crews (E1 crew William Shepherd, Yuri Gidzenko, and Sergei Krikalev) are seen in the Destiny Laboratory Module. Activities for flight day five can be seen on 'STS-102 Mission Highlight Resource Tape, Part 1 of 2, Tape 2 of 2' (internal ID 2001096941). Flight days 6-14 activities can be seen on 'STS-102 Mission Highlight Resource Tape, Part 2 of 2, Tape 1 of 2' (internal ID 2001096943) and 'STS-102 Mission Highlight Resource Tape, Part 2 of 2, Tape 2 of 2' (internal ID 2001096940).

STS-100 Mission Highlights Resource Tape, Part 2 of 4

Jul. 31, 2001; In English; Videotape: 59 min. 14 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001117678; JSC-1889; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

A continuation of 'STS-100 Mission Resource Tape, Part 1 of 4' (internal ID 2001117677), this video shows highlights from flight days four through six, including footage of the installation of the Canadarm (ISS' robotic arm) on the International Space Station (ISS), the spacewalks involved in this process, and the robotic arm lifting the Rafaello Multipurpose Logistics Module from the payload bay of Endeavour. The activities of flight days 6 (continued) - 11 can be found on 'STS-100 Mission Resource Tape, Part 3 of 4' (internal ID 2001117680) and 'STS-100 Mission Resource Tape, Part 4 of 4' (internal ID 2001117681).

STS-100 Mission Highlights Resource Tape, Part 1 of 4

Jul. 31, 2001; In English; Videotape: 59 min. 20 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001117677; JSC-1889; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

An overview of the STS-100 Endeavour mission is given through footage of each flight day. Scenes from flight days one through three show activities such as astronaut prelaunch procedures (breakfast, suit-up, and boarding Endeavour), the countdown and launch of the orbiter, and on-orbit activities, including the opening of the orbiter's payload bay doors, the checkout of the equipment to be used in the mission's spacewalks, and the rendezvous and docking of Endeavour with the International Space Station. A collection of views of the Earth from space include Lake Michigan and Lake Superior, Lake Erie and Ontario, the St. Lawrence River, the US Eastern Shore, Lake Manicouagan, Ile d'Anticosti, Gaspe Peninsula, Island of Newfoundland, Labrador, and the US West Coast. Additional shots show sunlight on the Indian Ocean, cloud cover over the Pacific Ocean, and a night view of an electrical storm over Africa. Footage from flight days 4-11 can be found on 'STS-100 Mission Resource Tape, Part 2 of 4' (internal ID 2001117678), 'STS-100 Mission Resource Tape, Part 3 of 4' (internal ID 2001117680), and 'STS-100 Mission

Resource Tape, Part 4 of 4' (internal ID 2001117681).

The crewmembers of STS-104, Commander Steven Lindsey, Pilot Charles Hobaugh, and Mission Specialists Mike Gernhardt, Jim Reilly, and Janet Kavandi, are heard narrating this video as footage is shown from various points in the mission. The crew is seen during suit-up, boarding the Shuttle, during launch, and performing many on-orbit activities, including the rendezvous with the International Space Station (ISS) (live and a computer animation), the three spacewalks (installing Quest Airlock and three external gas tanks), and the opening and outfitting of Quest. As the mission ends the crew bids farewell to the Expedition 2 crew (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms) and the Atlantis Orbiter undocks from ISS, performs the fly-around of the space station, and lands.

On this eleventh day of the STS-108 mission, the Expedition 3 crew (Commander Frank Culbertson, Jr. and Flight Engineers Mikhail Turin and Vladimir Dezhurov), Expedition 4 crew (Commander Yuri Onufrienko and Flight Engineers Carl Walz and Daniel Bursch), and STS-108 crew (Commander Dominic Gorie, Pilot Mark Kelly, and Mission Specialists Linda Godwin and Daniel Tani) are seen as the E3 crew bids farewell to the International Space Station (ISS) that has been their home for the previous several months. Endeavour undocks from ISS and performs the customary flyaround. The STS-108 crew and Commander Culbertson answer questions from the press in an on-orbit interview.

STS-109 Crew Interviews - Altman

Feb. 04, 2002; In English; Videotape: 34 min. 3 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002033710; JSC-1901A; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

STS-109 crew Commander Scott D. Altman is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut and his career path. He gives details on the mission's goals and significance, which are all related to maintenance of the Hubble Space Telescope (HST). After the Columbia Orbiter's rendezvous with the HST, extravehicular activities (EVA) will be focused on several important tasks which include: (1) installing the Advanced Camera for Surveys; (2) installing a cooling system on NICMOS (Near Infrared Camera Multi-Object Spectrometer); (3) repairing the reaction wheel assembly; (4) installing additional solar arrays; (5) augmenting the power control unit; (6) working on the HST's gyros. The reaction wheel assembly task, a late addition to the mission, may necessitate the abandonment of one or more of the other tasks, such as the gyro work.

STS-109 Mission Specialist James H. Newman is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut, his career path, and his most memorable experiences. He gives details on the mission's goals and objectives, which focus on the refurbishing of the Hubble Space Telescope, and his role in the mission. He provides a brief background on the Hubble Space Telescope, and explains the plans for the rendezvous of the Columbia Orbiter with the Hubble Space Telescope. He provides details and timelines for each of the planned Extravehicular Activities (EVAs), which include replacing the solar arrays, changing the Power Control Unit, installing the Advanced Camera for Surveys (ACS), and installing a new Cryocooler for the Near Infrared Camera and Multi-Object Spectrometer (NICMOS). He gives further explanation of each of these pieces of equipment. He also describes the break-out plan in place for these spacewalks. The interview ends with Newman explaining the details of a late addition to the mission's tasks, which is to replace a reaction wheel on the Hubble Space Telescope.

STS-109 Crew Interviews - Linnehan
Feb. 05, 2002; In English; Videotape: 44 min. 52 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002033715; JSC-1901E; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

STS-109 Mission Specialist 3 (MS3) Richard M. Linnehan is seen during a prelaunch interview. He answers questions about his lifelong desire to become an astronaut and his career path, which included becoming a zoo veterinarian. He gives details on the Columbia Orbiter mission, which has as its main purpose the maintenance and augmentation of the Hubble Space Telescope (HST). As MS3, his primary role in the mission pertains to EVAs (Extravehicular Activities) 1, 3, and 5. During EVA 1, Linnehan and another crewmember will replace one of two flexible solar arrays on the HST with a smaller, more efficient rigid solar array. The second solar array will be replaced on EVA 2 by other crewmembers. EVA 3 will involve the replacement of the Power Control Unit (PCU), and will require the first complete powering down of HST since its deployment. The possibility of a serious problem occurring is greatest during this portion of the mission because the original PCU was not built to be replaced. In EVA 5, Linnehan and another crewmember will install a replacement cooling system on NICMOS (Near Infrared Camera Multi-Object Spectrometer), which has not been operational. Linnehan discusses his role during the mission as well as that of his crewmates, and provides an abbreviated timeline, including possible contingencies.

STS-109 Mission Specialist 2 Nancy Jane Currie is seen during a prelaunch interview. She answers questions about her inspiration to become an astronaut and her career path. She gives details on the Columbia Orbiter mission which has as its main tasks the maintenance and augmentation of the Hubble Space Telescope (HST). While she will do many things during the mission, the most important will be her role as the primary operator of the robotic arm, which is responsible for grappling the HST, bringing it to the Orbiter bay, and providing support for the astronauts during their EVAs (Extravehicular Activities). Additionally, the robotic arm will be responsible for transferring new and replacement equipment from the Orbiter to the HST. This equipment includes: two solar arrays, a Power Control Unit (PCU), the Advanced Camera for Surveys, and a replacement cooling system for NICMOS (Near Infrared Camera Multi-Object Spectrometer).

STS-109 Crew Interview: Grunsfeld

Feb. 05, 2002; In English; Videotape: 1 hr. 2 min. 1 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002032711; JSC-1901C; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

STS-109 Payload Commander John Grunsfeld is seen during a prelaunch interview answering questions about his inspiration to become an astronaut and his career path. He gives details on the mission's goal (which is to service the Hubble Space Telescope (HST)), his role during the mission, the five scheduled spacewalks, the Columbia Orbiter's recent upgrades, and what he sees as the challenges of the mission. Grunsfeld describes how his experience on the STS-103 mission, a previous HST servicing mission, has helped prepare him for the STS-109 mission. The interview ends with Grunsfeld explaining why the servicing of the Reaction Wheel Assembly, a task added late in his training, is so important.

STS-108 Post Flight Presentation

Feb. 06, 2002; In English; Videotape: 18 min. 30 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002030466; JSC-1907; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The crewmembers of STS-108, Commander Dominic Gorie, Pilot Mark Kelly, and Mission Specialists Linda Godwin and Daniel Tani, narrate this video as footage from the mission is shown. The crew is seen flying into Kennedy Space Center, suiting up, boarding the Endeavour Orbiter, and during launch. Various mission highlights are seen, including the rendezvous with the International Space Station (ISS) and docking of Endeavour, the unloading of the Multipurpose Logistics Module (MPLM), and the spacewalk to install thermal blankets over the Beta Gimbal Assemblies (BGAs) at the bases of the Space Station's solar panels. A glimpse is given into the difficulties of working in a microgravity environment as the crewmembers attempt to eat food before it floats away from them and drink water from a bag. The exchange of the Expedition 4 (Yuri I. Onufrienko, Carl E. Walz, and Daniel W. Bursch) for the Expedition 3 crew (Frank L. Culbertson, Mikhail Turin, and Vladimir N. Dezhurov) is also seen. The Endeavour undocks from the ISS, which is seen over the Caribbean Sea. Endeavour passes over Cuba, and footage of the Swiss Alps is shown. The video ends with the landing of the spacecraft.

STS-109 Flight Day 3 Highlights

Mar. 03, 2002; In English; Videotape: 30 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002043977; BRF-1432C; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This footage from the third day of the STS-109 mission to service the Hubble Space Telescope (HST) begins with the grappling of the HST by the robotic arm of the Columbia Orbiter, operated by Mission Specialist Nancy Currie. During the grappling, numerous angles deliver close-up images of the telescope which appears to be in good shape despite many years in orbit around the Earth. Following the positioning of the HST on its berthing platform in the Shuttle bay, the robotic arm is used to perform an external survey of the telescope. Some cursory details are given about different equipment which will be installed on the HST including a replacement cooling system for the Near Infrared Camera Multi-Object Spectrometer (NICMOS) and the Advanced Camera for Surveys. Following the survey, there is footage of the retraction of both of the telescope's two flexible solar arrays, which was successful. These arrays will be replaced by rigid solar arrays

with decreased surface area and increased performance.

STS-109 Payload Commander John Grunsfeld and Mission Specialist Richard Linnehan are seen suiting up in preparation for their spacewalk with the assistance of Mission Specialists Michael Massimino and James Newman. Linnehan and Grunsfeld move the old solar arrays from the Hubble Space Telescope (HST) into the cargo bay of the Columbia Orbiter for storage. Grunsfeld is seen maneuvering around the HST to remove the connections to the diode box controller. Linnehan is seen controlling the new rigid solar array as he moves it into position onto the HST and Grunsfeld locks it into place. Footage is shown of Linnehan unfolding the solar array and Grunsfeld attaching the cables to the diode box controller to supply power to the solar array. Scenes of the HST with its new starboard rigid solar array are shown. The video concludes with footage of the activities of Nancy Currie, James Newman, and Michael Massimino during the spacewalk.

The Hubble Space Telescope (HST) is seen on its berthing platform on the rear of the cargo bay of the Columbia Orbiter. Additional footage shows the port solar array of the HST as well as the area where the new thermal blanket was installed. Mission Specialists James Newman and Michael J. Massimino are performing their spacewalk. The footage includes Newman unbolting and sliding out the Faint Object Camera, moving it into storage, then lifting the Advanced Camera for Surveys (ACS) out of the cargo bay, and Massimino installing the ACS. The second stage of their spacewalk shows Newman retrieving the Electronic Support Module out of the cargo bay, and assisting Massimino as he installs the module and its connectors in front of the ACS. As they return to Columbia, additional members of the crew are seen preparing spacesuits for the following day's spacewalk and cleaning the seals on the airlock. The video concludes with Pilot Duane G. Carey interviewing Massimino about his spacewalk using internet questions from school children.

On the sixth flight day of the STS-109 mission, the crewmembers of the Columbia Orbiter (Commander Scott Altman, Pilot Duane Carey, Payload Commander John Grunsfeld, and Mission Specialists Nancy Currie, James Newman, Richard Linnehan, and Michael Massimino) are shown in selected footage of their servicing mission to the Hubble Space Telescope (HST). The third of five extravehicular activities (EVA) is performed in which Linnehan and Grunsfeld replaced the HST's Power Control Unit (PCU). The astronauts' egress from the Orbiter was delayed after water was found in Grunsfeld's suit. The removal of the old unit was particularly difficult, given the difficulty of demating the PCU's 36 connectors encumbered by the heavy gloves of the astronaut's suit. During this space walk, the HST was powered down to a completely dormant state for the first time since its launch in 1990. Following the successful installation of the new PCU, the HST's power was restarted by engineers at the Goddard Space Flight Center (GSFC). There had been some concern about the telescope's possible failure to restart, but everything went smoothly.

A continuation of 'STS-105 Mission Highlights Resource Tape: Flight Days 1-3' (internal ID 2002046550), this video shows footage from flight days four through six of the STS-105 mission. Commander Scott Horowitz helps Mission Specialist Pat Forrester maneuver the Space Shuttle's robotic arm as it grapples the Multipurpose Logistics Module (MPLM) from Discovery's payload bay to the International Space Station (ISS). The three crews, STS-105 (Commander Horowitz, Pilot Fred Sturckow, and Mission Specialists Dan Barry and Forrester), Expedition 2 (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms), and Expedition 3 (Commander Frank Culbertson, Jr. and Flight Engineers

Mikhail Turin and Vladimir Dezhurov), are seen during unloading operations as they transfer equipment from the MPLM to the ISS. Forrester and Barry check their equipment and suits for the next day's spacewalks. The E2 crew shows the E3 crew around ISS. The crescent moon and the end of a sunset are seen from space. For activities from flight days 7-13, see 'STS-105 Mission Highlights Resource Tape: Flight Days 7-9' (internal ID 2002046552) and 'STS-105 Mission Highlights Resource Tape: Flight Days 10-13' (internal ID 2002046551).

A continuation of 'STS-105 Mission Highlights Resource Tape: Flight Days 1-3' (internal ID 2002046550), 'STS-105 Mission Highlights Resource Tape: Flight Days 4-6' (internal ID 2002046549), and 'STS-105 Mission Highlights Resource Tape: Flight Days 7-9' (internal ID 2002046552), this video shows footage from flight days 10 through 13 of the STS-105 mission. The Multipurpose Logistics Module (MPLM) is moved from the International Space Station (ISS) to the payload bay of Discovery. The STS-105 crew (Commander Scott Horowitz, Pilot Fred Sturckow, and Mission Specialists Dan Barry and Pat Forrester) and Expedition 2 crew (Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms) bid farewell to the Expedition 3 crew (Commander Frank Culbertson, Jr. and Flight Engineers Mikhail Turin and Vladimir Dezhurov), who are to remain on ISS. ISS is seen against the Earth as Discovery performs its fly-around after the orbiter undocks. There is no flight day footage from flight day 12. Discovery is seen landing.

STS-105 Mission Highlights Resource Tape: Flight Days 1-3, Part 1 of 4
Mar. 04, 2002; In English; Videotape: 1 hr. 15 min. 7 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002046550; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

An overview of the STS-105 mission is given through footage of each flight day. Scenes from flight days one through three show activities such as astronaut prelaunch procedures (breakfast, suit-up, and boarding Discovery), the launch from multiple vantage points, and various on-orbit activities. Expedition 3 (E3) Commander Frank Culbertson, Jr. and Flight Engineer Mikhail Turin perform the H-Reflex Experiment, an experiment to test the effects of microgravity on the human spinal cord. As Discovery approaches the International Space Station (ISS), the Expedition 2 (E2) crew, Commander Yuriy Usachev and Flight Engineers James Voss and Susan Helms, are seen working in the Destiny Laboratory Module aboard ISS. Discovery docks to the space station and the three crews (STS-105, E2, and E3) greet each other after the hatches between the orbiter and ISS are opened. As Discovery passes over the USA, Utah, Wyoming, South Dakota, and Minnesota are seen through patchy clouds. Footage from flight days 4-13 can be found on 'STS-105 Mission Highlights Resource Tape: Flight Days 4-6' (internal ID 2002046549), 'STS-105 Mission Highlights Resource Tape: Flight Days 7-9' (internal ID 2002046552), and 'STS-105 Mission Highlights Resource

Tape: Flight Days 10-13' (internal ID 2002046551).

STS-109 Flight Day 8 Highlights
Mar. 08, 2002; In English; Videotape: 41 min. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002047890; BRF-1432H; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Footage of the eighth day of STS-109 is shown during which Mission Specialists John Grunsfeld and Rick Linnehan service the Hubble Space Telescope (HST). A broad overview of the Columbia Orbiter mission is presented. On the fifth extravehicular activity (EVA) of the mission, Grunsfeld and Linnehan installed a new cryogenic cooling system and radiator on HST for NICMOS (Near Infrared Camera and Multi-Object Spectrometer) which had not been previously operational due to the failure of an earlier cooling system. Linnehan and Grunsfeld are both shown on the end of the Orbiter's robot arm, the Remote Manipulator System, which was controlled by Commander Scott Altman. Following the completion of their spacewalks, the two Mission Specialists make statements which include thanking the numerous support personnel. Linnehan answers questions on the differences between training simulation at facilities such as the Neutral Buoyancy Lab (NBL) and his actual experiences in space.

STS-110 Crew Interviews: Lee Morin
Mar. 12, 2002; In English; Videotape: 42 min. 10 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002049337; JSC-1909E; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

STS-110 Mission Specialist Lee Morin is seen during this preflight interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. Morin outlines his role in the mission in general, and specifically during the docking and extravehicular activities (EVAs). He describes the payload (S0 Truss and Mobile Transporter) and the dry run installation of the S0 truss that will take place the day before the EVA for the actual installation. Morin discusses the planned EVAs in detail and outlines what supplies will be left for the resident crew of the International Space Station (ISS). He ends with his thoughts on the most valuable aspect of the ISS.

STS-108 Mission Highlights Resource Tape
Mar. 06, 2002; In English; Videotape: 59 min. 41 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002049331; JSC-1908; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This is Part 1 of a three part video series which provides highlights of the STS-108 mission during which the Expedition Three crew (Commander Frank Culbertson) of the International Space Station (ISS) was relieved by the Expedition Four crew (Commander Yury Onfrienko). For the other parts of the series, refer to 'STS-108 Mission Highlights Resource Tape, Part 2 of 3' (Internal ID 2002049330) and 'STS-108 Mission Highlights Resource Tape, Part 3 of 3' (Internal ID 2002049329). During this video, the STS-108 crew of the Space Shuttle Endeavour (Commander Dom Gorie), as well as the Expedition Four crew, are shown preparing for liftoff at Kennedy Space Center (KSC). Preparations include preflight suiting up, and the strapping in of the crew by support staff. The launch is shown from the Launch Control Center. Following the orbital entry of Endeavour, there is an inspection of the shuttle's payload bay. There is some flight deck activity as the crew prepares for the rendezvous and docking of Endeavour with the ISS. Following the docking, the Expedition Three crew welcomes the others aboard the station, and both crews are briefed. There is an unobstructed view of the South Atlantic Ocean and the coast line of Argentina which includes Peninsula Valdes and Golfo Nuevo. The Raffaello Multipurpose Logistics Module (MPLM) is unberthed from the shuttle payload bay and attached to the ISS.

STS-108 Mission Highlights Resource Tape, Part 2 of 3
Mar. 06, 2002; In English; Videotape: 57 min. 25 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002049330; JSC-1908; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This video is a continuation of 'STS-108 Mission Highlights Resource Tape: Part 1 of 3' (Internal ID 2002049331). Flight day four footage continues with a video tour of the International Space Station (ISS). During flight day five, an exterior view of the Multipurpose Logistics Module (MPLM) is seen, followed by the crew unloading the supplies and equipment from the MPLM. Commander Dominic Gorie and Mission Specialist Linda Godwin are seen making preparations for the Extravehicular Activity (EVA) scheduled for the following day. Footage of an exterior view of the ISS is also shown. Flight day six footage includes Godwin and Mission Specialist Daniel Tani suiting up for their EVA and the installation of thermal blankets around the solar array wings of the ISS. Expedition 3 Commander Frank Culbertson is seen working in the ISS laboratory during flight day seven. Views are shown of Saudi Arabia and the Red Sea, the western coast of Australia, Cuba and Florida, and Switzerland and Northern Italy. During flight day eight, the crew is seen stowing objects in the MPLM for return to earth. The video concludes with footage of the treadmill used by the astronauts for physical exercise. Flight days nine through twelve are included in 'STS-108 Mission Highlights Resource Tape: Part 3 of 3' (Internal ID 2002049329).

A continuation of 'STS-108 Mission Highlights Resource Tape, Part 1 of 3' (internal ID 2002049331) and 'STS-108 Mission Highlights Resource Tape, Part 2 of 3' (internal ID 2002049330), this video shows footage from flight days 9-12. The control of the International Space Station (ISS) is handed from the Expedition 3 crew (Commander Frank Culbertson, Jr. and Flight Engineers Mikhail Turin and Vladimir Dezhurov) to the Expedition 4 crew (Commander Yuri Onufrienko and Flight Engineers Carl Walz and Daniel Bursch) in an on-orbit ceremony. Both Expedition crews and the STS-108 crew (Commander Dominic Gorie, Pilot Mark Kelly, and Mission Specialists Linda Godwin and Daniel Tani) are seen reloading the Rafaello Multipurpose Logistics Module (MPLM). External shots show the MPLM demating from the ISS and returning to the payload bay of Endeavour. The three crews bid farewell to each other before closing the hatches between ISS and Endeavour. The orbiter undocks from ISS and performs its flyarounds. ISS is seen against a backdrop of stars as Endeav-

our flies away. On the return flight to Earth, the Starshine 2 satellite is deployed. The video ends with the orbiter's landing as seen from several viewpoints.

STS-112 Crew Interviews - Magnus
Aug. 15, 2002; In English; 43 min., 9 sec. playing time, in color, with sound
Report No(s): JSC-1924C; NONP-NASA-VT-2002137519; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

STS-112 Mission Specialist 2 Sandra H. Magnus is seen during a prelaunch interview. She answers questions about her inspiration to become an astronaut and her career path. She gives details on the mission's goals, the most significant of which will be the installation of the S-1 truss structure on the International Space Station (ISS). The installation, one in a series of truss extending missions, will be complicated and will require the use of the robotic arm as well as extravehicular activity (EVA) by astronauts. Magnus also describes her function in the performance of transfer operations. Brief descriptions are given of experiments on board the ISS as well as on board the Shuttle.

STS-112 Crew Interviews: Sellers
Aug. 16, 2002; In English; 41 min., 24 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002137511; JSC-1924D; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Piers Sellers is an Astronaut from Crowborough, UK. His Bachelor of Science degree is in Ecological science from Scotland's University of Edinburgh and his doctorate is in biometeorology from Leeds University in the UK. After two years of intense training, Sellers's first assignment as a Mission Specialist is on Flight 111 STS-112. The goal of this flight is to continue building the International Space Station. Sellers, accompanied by five astronauts, will install the S1 truss of the space station which will take three EVA's, or Extra Vehicular Activities to complete. In EVA 1, the highest priority, the S1 truss will be attached to the space station. EVA 2, the electrical work, will set up the radiator and cooling equipment for the station. EVA 3, the final process of the flight, will prepare the station for the next mission. The primary reason for installing the truss is to change the center of gravity of the station so when the next truss is installed, it will be at a symmetrical point.

STS-112 Mission Commander Jeffrey Ashby is seen during this preflight interview, answering questions about his inspiration in becoming an astronaut and his career path and provides an overview of the mission. Ashby outlines his role in the mission in general, and specifically during the docking and extravehicular activities (EVAs). He describes the payload (S1 truss) and the importance that the S1 truss will have in the development of the International Space Station (ISS). Ashby discusses the delivery and installation of the S1 truss scheduled to be done in the planned EVAs in some detail. He touches on the use and operation of the Canadarm 2 robotic arm in this process and outlines what supplies will be exchanged with the resident crew of the ISS during transfer activities. He ends with his thoughts on the value of the ISS in fostering international cooperation.

Jun. 13, 2002; In English; 27 min., 29 sec., playing time, in color, with sound
Report No(s): BRF-1434I; NONP-NASA-VT-2002137516; No Copyright; Avail: CASI; V02, Videotape-VHS

The STS-111 flight crew consists of Kenneth D. Cockrell, Commander, Paul S. Lockhart, Pilot, Franklin R. Chang-Diaz, Mission Specialist, Philippe Perrin, (CNES), Mission Specialist, Valery G. Korzun, (RSA), ISS Up, Peggy A. Whitson, ISS Up , Sergei Y. Treschev (RSC), ISS Up, Yuri I. Onufriyenko (RSA), ISS Down, Carl E. Walz, and Daniel W. Bursch (ISS) Down. The main goal on this ninth day of flight STS-111, is to replace the wrist roll joint of the Robotic Arm on the International Space Station. Live footage of the wrist roll joint replacement is presented. Paul Lockhart is the spacewalk coordinator for this mission. Franklin Chang-Diaz and Philippe Perrin, are responsible for replacing the wrist roll joint and performing maintenance activities. The spacewalk to repair this joint occurs outside the Space Station's Quest Airlock. The

wrist roll joint was replaced successfully. The spacewalk took approximately 7 hours and 17 minutes to complete.

STS-111 Mission Specialist 1 Phillippe Perrin is seen during this preflight interview, where he gives a quick overview of his mission before answering questions about his inspiration to become an astronaut and his career path. Perrin outlines his role in the mission in general, and specifically during the docking and extravehicular activities (EVAs). He describes what the crew exchange will be like (transferring the Expedition 5 crew in place of the Expedition 4 crew on the International Space Station (ISS)) and the payloads (Mobile Base System (MBS) and the Leonardo Multi-Purpose Logistics Module). Perrin discusses the planned EVAs in detail and outlines what supplies will be left for the resident crew of the ISS. He also provides his thoughts about the significance of the mission to France and the value of the ISS.

Expedition 6 Crew Interviews: Don Pettit, Flight Engineer 2/ International Space Station (ISS) Science Officer (SO)
Oct. 09, 2002; In English; 21 min., 57 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2002137661; JSC-1926C; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Expedition 6 member Don Pettit (Flight Engineer 2/ International Space Station (ISS) Science Officer (SO)) is seen during a prelaunch interview. He answers questions about his inspiration to become an astronaut and his career path. Pettit, who had been training as a backup crewmember, discusses the importance of training backups for ISS missions. He gives details on the goals and significance of the ISS, regarding experiments in various scientific disciplines such as the life sciences and physical sciences. Pettit also comments on the value of conducting experiments under microgravity. He also gives an overview of the ISS program to date, including the ongoing construction, international aspects, and the routines of ISS crewmembers who inhabit the station for four months at a time. He gives a cursory description of crew transfer procedures that will take place when STS-113 docks with ISS to drop off Pettit and the rest of Expedition 6, and retrieve the Expedition 5 crew.

The fifth day of the STS-110 mission begins with live footage of the International Space Station. Commander Yuri Onufrienko, and Flight Engineers Carl Walz and Dan Bursch are shown on the Station. The STS-110 crewmembers consist of: Commander Michael Bloomfield, Pilot Stephen Frick, Mission Specialists Steven Smith, Rex Walheim, Ellen Ochoa, Jerry Ross and Lee Morin. Dan Bursch, Jerry Ross and Steven Smith answer questions from the media about interactions among the crewmembers. A live shot of the Space Shuttle Atlantis and the International Space Station over the Southern Pacific Ocean is also presented.

STS-113 Pilot Paul Lockhart is seen during this preflight interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. Lockhart outlines his role in the mission in general, and specifically during the docking and extravehicular activities (EVAs). He describes the primary mission payload (the P1 truss) and the crew transfer activities (Expedition 6 crew will replace the Expedition 5 Crew). Lockhart discusses the planned EVAs in detail and mentions what supplies will be left for the resident crew of the International Space Station (ISS). He ends with his thoughts about the importance of the ISS as the second anniversary of

continuous human occupation of the space station approaches.

STS-111 Mission Specialist 2 Franklin Chang-Diaz is seen during this interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. Chang-Diaz outlines his role in the mission in general, and specifically during the extravehicular activities (EVAs). He describes in great detail his duties in the three EVAs which involved preparing the Mobile Remote Servicer Base System (MBS) for installation onto the Space Station's Mobile Transporter, attaching the MBS onto the Space Station and replacing a wrist roll joint on the station's robot arm. Chang-Diaz also discusses the science experiments which are being brought on board the Space Station by the STS-111 mission. He also offers thoughts on how the International Space Station (ISS) fits into NASA's vision and how his previous space mission experience will benefit the STS-111 flight.

Expedition 5 Crew Interviews: Valery Korzun, Commander
Apr. 29, 2002; In English; 46 min., 3 sec. playing time, in color, with sound
Report No(s): JSC-1910A; NONP-NASA-VT-2002137579; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Expedition 5 Commander Valery Kozun is seen during a prelaunch interview. He gives details on the mission's goals and significance, his role in the mission and what his responsibilities will be as commander, what the crew exchange will be like (the Expedition 5 crew will replace the Expedition 4 crew on the International Space Station (ISS)), the daily life on an extended stay mission, the loading operations that will take place, the experiments he will be conducting on board, and the planned extravehicular activities (EVAs) scheduled for the mission. Kozun discusses the EVAs in greater detail and explains the significance of the Mobile Base System and the Crew Equipment Translation Aid (CETA) cart for the ISS. He also explains at some length the science experiments which will be conducted on board by the Expedition 5 crew members. Korzun also touches on how his previous space experience on Mir (including dealing with a very serious fire) will benefit the Expedition 5 mission.

STS 110 Mission Highlights Resource Tape, Part 3 of 4
Jun. 14, 2002; In English; 57 min., 35 sec. playing time, in color, with sound
Report No(s): JSC-1923; NONP-NASA-VT-2002137574; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

A continuation of 'STS 110 Mission Highlights Resource Tape'. This video, Part 3 of 4, shows footage from flight days 6 through 9 of STS-110. The spacecrew includes Michael J. Bloomfield, Commander Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. On flight day 6, Ross and Morin conduct an EVA (extravehicular activity) to secure a tripod like strut to the S0 Truss of the International

Space Station (ISS). They also move the drag link and keel pins from one face of the Truss to the other to free the rail on the truss for a railcar to move. Smith installs a camera onto the CANADARM robotic arm on flight day 7, and on flight day 8 the restraints are removed from the railcar connected to the S0 Truss in preparation for checkout. The checkout of the railcar is shown, including its inaugural run. Ross and Morin conduct another EVA on flight day 9 to complete the outfitting of the S0 Truss Structure. Notable footage includes views of Ross and Morin at work from the helmet-mounted camera on Ross' EVA suit, including close-ups of the pistol grip tool, CANADARM 2 onboard the ISS lit at sunrise, a 'diamond ring' effect formed by the Sun between the Earth's limb and the ISS, a brief shot of the Yucatan peninsula, and a end-to-end pan down the length of the ISS. The activities from other flights days can be seen on 'STS 110 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002137575), 'STS 110 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137573), and 'STS 110 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137517).

A continuation of 'STS 110 Mission Highlights Resource Tape'. This video, Part 2 of 4, shows footage from flight days 3 through 5 of STS-110. The flight crew includes Michael J. Bloomfield, Commander; Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. The coverage from flight day 3 includes docking replays of Atlantis and the International Space Station (ISS), and postdocking procedures, as well as intermingling of the flight crew with the Expedition 4 crew (Yury I. Onufrienko, Commander; Daniel W. Bursch, Flight Engineer; Carl E. Walz, Flight Engineer) of the ISS. Flight day 4 includes an EVA (extravehicular activity) in which Walheim and Smith lift the S0 Truss from the payload bay, and temporarily clamp it onto the Destiny laboratory. On flight day 5 a suite of spaceborne experiments (not shown) arrives at Destiny, including protein crystal growth and wheat plant growth experiments. Notable footage includes Hawaii, New Zealand, and sunrise on Atlantis. An unknown object steaks across the field of view during the video, with the Earth in the background. The activities of the other flight days can be seen on 'STS 110 Mission Highlights Resource Tape, Part 1 of 4' (internal ID 2002137575), 'STS 110 Mission Highlights Resource Tape, Part 3 of 4' (internal ID 2002137574), and 'STS 110 Mission Highlights Resource Tape, Part 4 of 4' (internal ID 2002137517).

The crewmembers are shown being suited for the STS-110 flight. The STS-110 crews are shown in training for four EVA's on the International Space Station. The crewmembers consist of: Michael J. Bloomfield, mission commander; Stephen N. Frick, pilot; and mission specialists: Ellen Ochoa, Lee M.E. Morin, Rex J. Walheim, Steven L. Smith, and Jerry Ross. Crew ascent middeck operations and Orbiter Skills Training in a fixed Based Simulator are the training areas shown. The STS-110 crew and Expedition four are seen during training at the Johnson Space Center Space Station Training Facility (SSTF). A photo session of the crew is also presented.

A continuation of 'STS 110 Mission Highlights Resource Tape'. This video, Part 4 of 4, shows footage from flight days 10 through 12 of STS-110. The spacecrew includes Michael J. Bloomfield, Commander; Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. Flight day 10 includes an exchange of farewells with the Expedition 4 crew (Yury I. Onufrienko, Commander; Daniel W. Bursch, Flight Engineer; Carl E. Walz, Flight Engineer) of the International Space Station (ISS), and undocking. The video includes many views of the ISS as Atlantis departs, including cloud cover and the Earth's limb as backgrounds. There is also a view of Atlantis with its payload bay open. On flight day 11, in

preparation for landing, the crew conducts a checkout of flight controls and a test firing. A spaceborne wheat plant experiment onboard the ISS is briefly shown. Flight day 12 includes closing the payload bay, suit-up, and landing. Kennedy Space Center is seen from the air, and the video shows landing replays, as well as a heads-up display view of the landing. Earth views include clear views of Western Sahara, Morocco, Mauritania, and Algeria, with the Atlantic Ocean, a cloud obstructed view of Newfoundland and the Atlantic, Pacific Ocean sun glint, and an excellent view of the Chicago area and Lake Michigan at night. The activities from other flights days can be seen on 'STS 110 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002137575), 'STS 110 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137573), and 'STS 110 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002137574).

STS-110 Flight Day 6 Highlights
Apr. 13, 2002; In English; 41 min., 30 sec. playing time, in color, with sound
Report No(s): BRF-1433F; NONP-NASA-VT-2002137515; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

On the sixth day of the STS-110 mission, Mission Specialists Jerry Ross and Lee Morin are seen in the second extravehicular activity (EVA) of this mission to the International Space Station (ISS). The video opens with the two astronauts preparing for the EVA, which will be Ross' eighth, thereby making him the most experienced space-walker in history. This pair of astronauts has been dubbed the Silver Team, largely because they both have grandchildren. As Ross and Morin prepare for the EVA by breathing pure oxygen and experiencing reduced pressure, Mission Specialist Ellen Ochoa maneuvers the robotic arm towards the hatch of the Space Shuttle Atlantis. There is video footage of the astronauts exiting the hatch and preparing their tools and work areas. During this EVA the astronauts will install two tripod-like struts, which will serve as structural attachments between the S-0 truss segment and the Destiny Laboratory Module. While the construction takes place, helmet mounted cameras on the spacesuits provide live video of the astronauts at work, most often using a pistol grip tool used as an electric ratcheting-type drill to loosen and tighten bolts. Following the installation of the struts, Ross and Morin remove the draglinks and keelpins that had functioned to hold the S0 truss structure securely in Atlantis' payload bay during the launch sequence of the mission. They move these to temporary storage positions, bolted on the outside of the ISS. They then install an umbilical system that will provide power to the Mobile Transporter (MT).

The most significant highlights of flight day 4 of STS-111 are the lifting of the Leonardo Multi Purpose Logistics Module (MPLM) out of Endeavour's payload bay, and its temporary attachment to the Unity module of the International Space Station (ISS). The lifting and attachment are shown. Also shown is the testing of cameras on the CANADARM2 robotic arm on the ISS, an ISS extravehicular activity (EVA) suit, and an interview with the outgoing Expedition 4 crew of the ISS. Earth views include the ISS and Earth limb, and cloud formations.

This video, Part 1 of 4, shows footage from flight days 1 and 2, and part of day 3, of STS-110. The spacecrew includes Michael J. Bloomfield, Commander; Stephen N. Frick, Pilot; Jerry L. Ross, Mission Specialist; Steven L. Smith, Mission Specialist; Ellen Ochoa, Mission Specialist; Lee M.E. Morin, Mission Specialist; Rex J. Walheim, Mission Specialist. They are shown at their pre-launch meal, introducing themselves and talking about their roles on the coming flight. The launch of Atlantis is shown, with replays. On flight day 2, the crew conducts a checkout of the CANADARM robotic arm. Flight day 3 includes Atlantis docking with the International Space Station (ISS), firing its thrusters to reach it. The approach and docking are shown. Other notable footage includes CANADARM with the Earth's limb in the background, Atlantis moving over a cloud cover background, sunlight from behind the Earth's limb, showing the 'diamond ring' effect, sunrise

upon Atlantis, and the docking hatches of the two spacecraft during approach. The activities from other flights days can be seen on 'STS 110 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137573), 'STS 110 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002137574), and 'STS 110 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137517).

STS-110 Flight Day 7 Highlights
Apr. 14, 2002; In English; 32 min. playing time, in color, with sound
Report No(s): BRF-1433G; NONP-NASA-VT-2002137514; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

On the seventh day of STS-110, Mission Specialists Steven Smith and Rex Walheim are shown preparing for their second extravehicular activity (EVA) and the third of the mission, with the assistance of Mission Specialist Jerry Ross. Following this mission, Ross and Smith will be the first and second most experienced spacewalkers, respectively, in history. A camera mounted on the Space Shuttle Atlantis shows footage of the International Space Station. While Smith and Walheim are on EVA, Mission Specialists Ross and Lee Morin will provide choreography from inside the Atlantis crew cabin, Pilot Stephen Frick will operate the robotic arm, and Commander Mike Bloom will control the cameras on the robotic arm. Smith and Walheim are shown exiting the airlock hatch and then installing an PFR (Portable Foot Restraint) on the end of the robotic arm, from which much of the work will be done. Following the switching off of a circuit breaker, the main EVA task of rewiring umbilical cables that provide power, commands, and video is begun. These cables will be connected to the Mobile Transporter's (MT) robotic arm. The MT, an external transportation system which runs on rails, is seen with a helmet mounted camera as the astronauts work to release bolts that had served to secure the MT during launch. After a final check of the umbilical connections mated, the Umbilical Reconfiguration Panel is fitted over the cables, and the astronauts make their way to the airlock hatch.

Apr. 15, 2002; In English; 38 min., 16 sec. playing time, in color, with sound
Report No(s): BRF-1433H; NONP-NASA-VT-2002137518; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

On Flight Day 8 of the STS-110 mission, the combined members of the Atlantis STS-110 crew and the International Space Station (ISS) Expedition 4 crew, Commanders Michael J. Bloomfield and Yury I. Onufrienko, respectively, answer questions posed to them by press members on the ground. Topics covered include: challenges of long term space habitation, adequacy of training for the on-orbit construction of the space station, details on the Mobile Transporter (MT) railcar system. Footage of the MT directly precedes and follows the extended question and answer portion of the video. The MT is seen from a variety of angles, as it slowly moves from Workstation 4 to Workstation 5 in order to test its ability to grapple to a fixed point along the track. The MT will eventually be used as a base for the robot arm in order to perform maintenance and assembly tasks on the ISS.

STS-107 Crew Interviews: Kalpana Chawla MS2
Jun. 10, 2002; In English; 1 hr., 8 min., 30 sec. playing time, in color, with sound
Report No(s): JSC-1920D; NASA-NONP-VT-2002139466; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

STS-107 Mission Specialist 2 Kalpana Chawla is seen during this preflight interview where she gives a quick overview of the mission before answering questions about her inspiration to become an astronaut and her career path. Chawla outlines her role in the mission in general, and specifically in conducting the on-board science experiments. She discusses the following experiments in detail: MEIDEX (Mediterranean Israel Dust Experiment), CM2 (Combustion Module 2), MIST (Water Mist Fire Suppression), SOFBALL (Structures of Flame Balls at Low Lewis-Number), LSP (Laminar Soot Processes), MGM (Mechanics of Granular Materials) and BDS (Biotechnology Demonstration System). She also discusses the potential benefits of space research, the dual-work shift of the mission and the rewards of international cooperation.

Expedition 6 Crew Interviews: Nikolai Budarin FEI (Flight Engineer 1)

Oct. 11, 2002; In English; 20 min., 53 sec. playing time, in color, with sound

Report No(s): JSC-1926B; NONP-NASA-VT-2002137653; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Expedition 6 Flight Engineer Nikolai Budarin is seen during a prelaunch interview. He provides details on the mission's goals and significance, his role in the mission, what his responsibilities will be, what the crew activities will be like (docking of a Progress unpiloted supply vehicle, maintaining the space station, conducting science experiments and performing one spacewalk), the day-to-day life on an extended stay mission, and the experiments he will be conducting on board. Budarin also discusses how his previous experiences on mir space missions will help him and ends his thoughts on how valuable the International Space Station has proven.

Crew Interviews: Treschev

May 08, 2002; In English; 36 min., 11 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2002137531; JSC-1910C; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Sergei Treschev is a Cosmonaut of the Rocket Space Corporation Energia, (RSC), from Volynsky District, Lipetsk Region (Russia). He graduated from Moscow Energy Institute. After years of intense training with RSC Energia, he was selected as International Space Station (ISS) Increment 5 flight engineer. The Expedition-Five crew (two Russian cosmonauts and one American astronaut) will stay on the station for approximately 5 months. The Multipurpose Logistics Module, or MPLM, will carry experiment racks and three stowage and resupply racks to the station. The mission will also install a component of the Canadian Arm called the Mobile Base System (MBS) to the Mobile Transporter (MT) installed during STS-110. This completes the Canadian Mobile Servicing System, or MSS. The mechanical arm will now have the capability to 'inchworm' from the U.S. Lab fixture to the MSS and travel along the Truss to work sites.

STS-107 Mission Specialist 1 David Brown is seen during this preflight interview where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career. Brown outlines his role in the mission in general, and specifically during the conducting of on-board science experiments. Brown discusses the following instruments and experiments in detail: ARMS (Advanced Respiratory Monitoring System), MEIDEX (Mediterranean Israeli Dust Experiment), Combustion Module 2, and FREESTAR (Fast Reaction Enables Science Technology and Research). He also describes the new primary payload carrier, the SPACEHAB research double module which doubles the amount of space available for research. Brown shares his thoughts about the importance of international cooperation in mission planning and the need for scientific research in space.

STS-107 Commander Rick Husband is seen during this preflight interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. Husband outlines what his role in the mission will be, what training the crew received, what crew member responsibilities will be, particularly during launch and reentry, what day to day life will be like on an extended duration mission, and what science experiments are going to be conducted onboard. He discusses the following science experiments and instruments in detail: MEIDEX (Mediterranean Israeli Dust Experiment), SOLSE (Shuttle Ozone Limb Sounding Experiment, FREESTAR (Fast Reaction Enabling Science Technology and Research) and various student projects. Husband also touches on the importance of space research, the value of international cooperation,

the reason for dual crew shifts on the mission and the role of crew members as research subjects.

On this fifth day of the STS-112 mission, the crewmembers Atlantis will begin transferring equipment and supplies to the orbiting laboratory. The crew reviews procedures for Saturday's spacewalk. Mission Specialists, Dave Wolf and Piers Sellers will prepare the tools and other equipment for use during Saturday's spacewalk. The spacewalkers reverse positions for most of the EVA, with Sellers riding the arm and Wolf free-floating while tethered to the station. They will attach umbilicals, install a second camera, install spool positioning devices to quickly disconnect fittings on ammonia lines and release radiator beam launch locks. The crewmembers will move a number of scientific experiments back and forth between the vehicles to return completed experiments to Earth and deploy new experiments at the station. One experiment transferred includes a set of liver cell tissue samples from an experiment studying the function of human liver cells in micro-gravity experiments were moved from the station onto the shuttle for return to Earth. Payload experiments such as Marshall Space Flight Center's protein crystals in micro-gravity experiments were moved to and from the station.

STS-112 Mission Specialist David Wolf is seen during this preflight interview, where he first answers questions on his career path and role models. Other questions cover mission goals, ISS (International Space Station) Expedition 5 spacecrew, crew training, the S1 Truss and its radiators, the MBS (Mobile Base Structure), his experience onboard Mir, and his EVAs (extravehicular activities) on the coming mission. The EVAs are the subject of several questions. Wolf discusses his crew members, and elsewhere discusses Pilot Pamela Melroy's role as an IV crew member during EVAs. In addition, Wolf answers questions on transfer operations, the

SHIMMER experiment, and his thoughts on multinational crews and crew bonding.

On Flight Day 5 of STS-111, the crew of Endeavour (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist) and the Expedition 5 crew (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer) and Expedition 4 crew (Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer) are aboard the docked Endeavour and International Space Station (ISS). The ISS cameras show the station in orbit above the North African coast and the Mediterranean Sea, as Chang-Diaz and Perrin prepare for an EVA (extravehicular activity). The Canadarm 2 robotic arm is shown in motion in a wide-angle shot. The Quest Airlock is shown as it opens to allow the astronauts to exit the station. As orbital sunrise approaches, the astronauts are shown already engaged in their EVA activities. Chang-Diaz is shown removing the PDGF (Power and Data Grapple Fixture) from Endeavour's payload bay as Perrin prepares its installation position in the ISS's P6 truss structure; The MPLM is also visible. Following the successful detachment of the PDGF, Chang-Diaz carries it to the installation site as he is transported there by the robotic arm. The astronauts are then shown installing the PDGF, with video provided by helmet-mounted cameras. Following this task, the astronauts are shown preparing the MBS (Mobile Base System) for grappling by the robotic arm. It will be mounted to the Mobile Transporter (MT), which will traverse a railroad-like system along the truss structures of the ISS, and support astronaut activities as well as provide an eventual mobile base for the robotic arm.

On the fourth day of STS-112, its crew (Jeffrey Ashby, Commander; Pamela Melroy, Pilot; David Wolf, Mission Specialist; Piers Sellers, Mission Specialist; Sandra Magnus, Mission Specialist; Fyodor Yurchikhin, Mission Specialist) onboard Atlantis and the Expedition 5 crew (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer) onboard the International Space Station (ISS) are seen preparing for the installation of the S1 truss structure. Inside the Destiny Laboratory Module, Korzun and other crewmembers are seen as they busily prepare for the work of the day. Sellers dons an oxygen mask and uses an exercise machine in order to purge the nitrogen from his bloodstream, in preparation for an extravehicular activity (EVA). Whitson uses the ISS's Canadarm 2 robotic arm to grapple the S1 truss and remove it from Atlantis' payload bay, with the assistance of Magnus. Using the robotic arm, Whitson slowly maneuvers the 15 ton truss structure into alignment with its attachment point on the starboard side of the S0 truss structure, where the carefully orchestrated mating procedures take place. There is video footage of the entire truss being rotated and positioned by the arm, and ammonia tank assembly on the structure is visible, with Earth in the background. Following the completion of the second stage capture, the robotic arm is ungrappled from truss. Sellers and Wolf are shown exiting the the Quest airlock hatch to begin their EVA. They are shown performing a variety of tasks on the now attached S1 truss structure, including work on the Crew Equipment Translation Cart (CETA), the S-band Antenna Assembly, and umbilical cables that provide power and remote operation capability to cameras. During their EVA, they are shown using a foot platform on the robotic arm. Significant portions of their activities are shown from the vantage of helmet mounted video cameras. The video closes with a final shot of the ISS and its new S1 truss.

On Flight Day 10 of the STS-112 mission, its crew (Jeffrey Ashby, Commander; Pamela Melroy, Pilot; David Wolf, Mission Specialist; Piers Sellers, Mission Specialist; Sandra Magnus, Mission Specialist; Fyodor Yurchikhin, Mission Specialist) on the Atlantis and the Expedition 5 crew on the International Space Station (ISS) (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer) are shown exchanging farewells in the ISS's Destiny Laboratory Module following the completion of a week-long period of docked operations. The Expedition 5 crew is nearing the end of five and a half continuous months aboard the space station. Following the closing of the hatches, the Atlantis Orbiter undocks from the station, and Melroy pilots the shuttle slowly away from the ISS, and engages in a radial fly-around of the station. During the fly-around cameras aboard Atlantis shows ISS from a number of angles. ISS cameras also show Atlantis. There are several shots of each craft with a variety of background settings including the Earth, its limb, and open space. The video concludes with a live interview of Ashby, Melroy and Yurchikhin, still aboard Atlantis, conducted by a reporter on the ground. Questions range from feelings on the conclusion of the mission to the experience of being in space.

The primary goal of the mission was the installation of the Integrated Truss Structure S1 on the ISS.

Footage shows the crew of STS-112 (Jeffrey Ashby, Commander; Pamela Melroy, Pilot; David Wolf, Piers Sellers, Sandra Magnus, and Fyodor Yurchikhin, Mission Specialists) during several parts of their training. The video is arranged into short segments. In 'Topside Activities at the NBL', Wolf and Sellers are fitted with EVA suits for pool training. 'Pre-Launch Bailout Training in CCT II' shows all six crew members exiting from the hatch on a model of a shuttle orbiter cockpit. 'EVA Training in the VR Lab' shows a crew member training with a virtual reality simulator, interspersed with footage of Magnus, and Wolf with Melroy, at monitors. There is a 'Crew Photo Session', and 'Pam Melroy and Sandy Magnus at the SES Dome' also features a virtual reality simulator. The final two segments of the video involve hands-on training. 'Post Landing Egress at the FFT' shows the crew suiting up into their flight suits, and being raised on a harness, to practice rapelling from the cockpit hatch. 'EVA Prep and Post at the ISS Airlock' shows the crew assembling an empty EVA suit onboard a model of a module. The crew tests oxygen masks, and Sellers is shown on an exercise bicycle with an oxygen mask, with his heart rate monitored (not shown).

On Flight Day 3 of STS-111, the crew of Endeavour (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist) and the Expedition 5 crew (Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer), begin their final approach towards the International Space Station (ISS). From cameras aboard the ISS, live video of Endeavour is shown as it approaches the station. The Orbiter is maneuvered slowly to a position for docking, and cameras from multiple angles show this process. As it is maneuvered, there are clear views of its payload bay, which includes the Leonardo MultiPurpose Logistics Module (MPLM) and the Mobile Base System (MBS), both of which will be installed on the ISS during this mission. In the final stages of the docking procedure there is close-up footage of Endeavour meeting the ISS's Pressurized Mating Adapter 2 on the Destiny Laboratory Module. Inside the ISS, the Expedition 4 crew (Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer), which will be replaced by the Expedition 5 crew, prepares for final docking. Crew members are shown transferring equipment from the Endeavour to the ISS, prior to a replay of the mating of the two crafts. In the replay, the hatch is shown being opened and the two newly arrived crews are greeted with excitement by Expedition 4 crewmembers. The video closes with footage of the Quest airlock used for EVA (extravehicular activity) egress, and the Canadarm 2 robotic arm.

STS-111 Expedition Five Crew Training Clip
May 17, 2002; In English; 40 min. playing time, in color, with sound
Report No(s): JSC-1911; NONP-NASA-VT-2002137692; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The STS-111 Expedition Five Crew begins with training on payload operations. Flight Engineer Peggy Whitson and Mission Specialist Sandy Magnus are shown in Shuttle Remote Manipulator System (SRMS) procedures. Flight Engineer Sergei Treschev gets suited for Neutral Neutral Buoyancy Lab (NBL) training. Virtual Reality lab training is shown with Peggy Whitson. Habitation Equipment and procedures are also presented.

STS-111 Flight Day 8 Highlights
Jun. 12, 2002; In English; 28 min. playing time, in color, with sound
Report No(s): BRF-1434H; NONP-NASA-VT-2002137694; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On Flight Day 8 of STS-111 (Space Shuttle Endeavour crew includes: Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist; International Space Station (ISS) Expedition 5 crew includes Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer; ISS Expedition 4 crew includes: Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer), the Leonardo Multi Purpose Logistics Module (MPLM) is shown from the outside of the ISS. The MPLM, used to transport goods to the station for the Expedition 5 crew, and to return goods used by the Expedition 4 crew, is being loaded and unloaded by crewmembers. Live video from within the Destiny Laboratory Module shows Whitson and Chang-Diaz. They have just completed the second of three reboosts planned for this mission, in each of which the station will gain an additional statutory mile in altitude. Following this there is an interview conducted by ground-based reporters with some members from each of the three crews, answering various questions on their respective missions including sleeping in space and conducting experiments. Video of Earth and space tools precedes a second interview much like the first, but with the crews in their entirety. Topics discussed include the feelings of Bursch and Walz on their breaking the US record for continual days spent in space. The video ends with footage of the Southern California coastline.

STS-111 Flight Day 7 Highlights
Jun. 11, 2002; In English; 25 min. playing time, in color, with sound
Report No(s): BRF-1434G; NONP-NASA-VT-2002137693; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

On Flight Day 7 of STS-111 (Space Shuttle Endeavour crew includes: Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist; Philippe Perrin, Mission Specialist; International Space Station (ISS) Expedition 5 crew includes Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight Engineer; ISS Expedition 4 crew includes: Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer), this video opens with answers to questions asked by the public via e-mail about the altitude of the space station, the length of its orbit, how astronauts differentiate between up and down in the microgravity environment, and whether they hear wind noise during the shuttle's reentry. In video footage shot from inside the Quest airlock, Perrin is shown exiting the station to perform an extravehicular activity (EVA) with Chang-Diaz. Chang-Diaz is shown, in helmet mounted camera footage, attaching cable protection booties to a fish-stringer device with multiple hooks, and Perrin is seen loosening bolts that hold the replacement unit accomodation in launch position atop the Mobile Base System (MBS). Perrin then mounts a camera atop the mast of the MBS. During this EVA, the astronauts installed the MBS on the Mobile Transporter (MT) to support the Canadarm 2 robotic arm. A camera in the Endeavour's payload bay provides footage of the Pacific Ocean, the Baja Peninsula, and Midwestern USA. Plumes from wildfires in Nevada, Idaho, Yellowstone National Park, Wyoming, and Montana are visible. The station continues over the Great Lakes and the Eastern Provinces of Canada.

STS-110 Flight Day 2 Highlights
Apr. 09, 2002; In English; 24 min. playing time, in color, with sound

Report No(s): BRF-1433B; NONP-NASA-VT-2002139351; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The second flight day of the STS-110 mission begins with Pilot Stephen Frick, and Mission Specialists Ellen Ochoa and Jerry Ross shown in the flight deck of the Space Shuttle Atlantis. Ellen Ochoa answers questions about the goals of the mission which are to install the S(0) truss segment on the International Space Station. Television cameras are attached to the robotic arm to take pictures of the truss in orbit. Commander Mike Bloomfield and Stephen Frick talks about the physical condition of the robotic arm.

STS-111 Crew Interviews: Paul Lockhart, Pilot

Apr. 30, 2002; In English; 49 min., 35 sec. playing time, in color, with sound

Report No(s): JSC-1912B; NONP-NASA-VT-2002139461; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

STS-111 Pilot Paul Lockhart is seen during this preflight interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. He discusses the following mission goals: the crew transfer activities (the Expedition 5 crew is replacing the Expedition 4 crew on the International Space Station (ISS)), the delivery of the payloads which includes the Mobile Remote Servicer Base System (MBS), and the planned extravehicular activities (EVAs) which include attaching the MBS to the ISS and repairing the station's robot arm. He describes in-flight procedures for launch, reentry and docking with the ISS. He ends with his thoughts on the role of international cooperation in building and maintaining ISS.

On this fourth day of the STS-110 mission, the crewmembers of Atlantis (Michael Bloomfield, Commander; Stephen Frick, Pilot; and Mission Specialists Ellen Ochoa, Jerry Ross, Rex Walheim, Steven Smith and Lee Morin) are seen briefly performing various crew procedures. The extravehicular activity (EVA) performed by Smith and Walheim to install the S0 truss onto the International Space Station (ISS) is shown in great detail. Shots of the robot arm lifting the S0 truss out of the Atlantis payload bay are also seen. A view of Hawaii is briefly shown.

STS-107 Crew Interviews: Ilan Ramon, Mission Specialist

Jun. 10, 2002; In English; 51 min., 10 sec. playing time, in color, with sound

Report No(s): JSC-1920G; NONP-NASA-VT-2002140924; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

STS-107 Mission Specialist Ilan Ramon is seen during this preflight interview, where he gives a quick overview of the mission before answering questions about his inspiration to become an astronaut and his career path. He outlines his role in the mission in general, and specifically in conducting on-board science experiments. He discusses the following instruments and sets of experiments in detail: CM2 (Combustion Module 2), FREESTAR (Fast Reaction Enabling Science Technology and Research), MEIDEX (Mediterranean Israeli Dust Experiment) and MGM (Mechanics of Granular Materials). Ramon also mentions on-board activities during launch and reentry, mission training and microgravity research. In addition, he touches on the dual work-shift nature of the mission, the use of crew members as research subjects including pre and postflight monitoring activities, the emphasis on crew safety during training and the value of international cooperation.

STS-110 Post Flight Presentation

May 21, 2002; In English; 18 min. playing time, in color, with sound

Report No(s): JSC-1922; NONP-NASA-VT-2002140931; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The crewmembers of STS-110 (Michael Bloomfield, Commander; Stephen Frick, Pilot; Mission Specialists Ellen Ochoa, Jerry Ross, Rex Walheim, Steve Smith and Lee Morin) narrate this video as footage from the mission is seen, starting with crew suit up, and launch of Atlantis. Various on-orbit activities are shown, including the opening of the payload bay

doors, the rendezvous and docking of Atlantis with the International Space Station (ISS). Crew activities shown include loading operations, extravehicular activities (EVAs), robot arm operation and crew living conditions. Specific EVAs footage includes the unloading of the S0 truss from the Atlantis payload bay and installation onto the ISS. The crew is also shown preparing the Mobile Transporter for future use. The video ends with Atlantis undocking from the ISS and landing at Kennedy Space Center.

The STS-107 is a Multidiscipline Microgravity and Earth Science Research Mission to conduct international scientific investigations in orbit. The crew consists of Payload Specialist Ilan Ramon, Commander Rick Husband, Pilot William McCool, and Mission Specialists David Brown, Laurel Clark, Michael Anderson, and Kalpana Chawla. The crewmembers are shown getting suited in the Pre-Launch Ingress and Egress training area. The other areas of training include Payload Experiment in Fixed Base/Spacehab, Mist Experiment Combustion Module 2, Phab 4 Experiment in CCT Mid-deck and Payload Experiment Demo-Protein Crystal Growth.

STS-109 Post Flight Presentation
Apr. 02, 2002; In English; 17 min., 10 sec. playing time, in color, with sound
Report No(s): JSC-1915; NONP-NASA-VT-2002140923; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The STS-109 Post Flight presentation begins with Mission Specialists Nancy J. Currie, Michael J. Massimino, James H. Newman, and Richard M. Linnehan shown getting suited on launch day. Actual footage of the liftoff of the Space Shuttle Columbia is shown. Five spacewalks are performed to service the Hubble Space Telescope. Richard Linnehan and John Grunsfield are replacing solar arrays, connectors and power control units on the Hubble Space Telescope. Mission Specialist Nancy Currie will use Space Shuttle Columbia's robotic arm to grab the telescope, move it away from the orbiter and release it. A look at the coast of South America is also presented.

On the sixth flight day of STS-112 (Atlantis crewmembers include Dave Wolf, Mission Specialists; Sandy Magnus, Mission Specialists; Pam Melroy, Pilot; Jeff Ashby, Commander; Piers Sellers, Mission Specialists; Fyodor Yurchikhin, Mission Specialists), Wolf and Sellers are seen preparing for an EVA (extravehicular activity) during which they will service the ISS (International Space Station) to which Atlantis is docked. This will be the 45th EVA in support of ISS assembly and maintenance and the 20th conducted from the ISS. While the astronauts prepare, video footage is shown of the Sahara desert, over which the ISS is passing in a track that will take it over North Africa and the Mediterranean Sea. During the EVA, the External Television Camera Group will be brought out of the station and attached to the station. As the astronauts work, their helmet mounted cameras provide excellent footage of the ISS with the Shuttle docked at the Destiny Laboratory Module. Multiple shots of the station show several modules including Destiny, Quest, Unity and Zarya, as well as Canadarm 2 and Atlantis. The video closes with a wide angle shot of the ISS.

The crews of STS-111 (Endeavour's crew: Ken Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Mission Specialist (MS); Philippe Perrin, MS; International Space Station's (ISS) Expedition 4 crew: Yury Onufrienko, Commander; Daniel Bursch, Flight Engineer; Carl Walz, Flight Engineer; ISS Expedition 5 crew: Valery Korzun, Commander; Peggy Whitson, Flight Engineer; Sergei Treschev, Flight En-

gineer) narrate this video of highlights from the mission. It includes footage from each major portion of the mission: launch preparation, launch, entering orbit, opening payload bay doors, rendezvous of Endeavour with ISS, docking of the crafts and the meeting between Endeavour and Expedition 5 crews and the Expedition 4 crew, which Expedition 5 relieved. Docked operations include: crew transfer procedures, transfer of goods, EVA (extravehicular activity) prep, EVA performed by Chang-Diaz and Perrin which included installing a grapple fixture, mounting the Mobile Base System (MBS) to the Mobile Transporter (MT), and changing a joint on the station's Canadarm 2 robotic arm. The video ends with re-entry and landing of the shuttle.

STS-109 Mission Highlights Resource Tape, Part 4 of 4, Flight Days 8 - 12
May 31, 2002; In English; 1 hr., 30 min. playing time, in color, with sound
Report No(s): JSC-1916; NONP-NASA-VT-2002137577; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This video, Part 4 of 4, shows footage of crew activities from flight days 8 through 12 of STS-109. The crew included: Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, Richard Linnehan, James Newman, Michael Massimino, Mission Speicalists. The activities from other flights days can be seen on 'STS-109 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139471), 'STS-109 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137664), and 'STS-109 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139476). The primary activity on flight day 8 was an EVA (extravehicular activity) by Grunsfeld and Linnehan to install a cryocooler and radiator for the NICMOS (Near Infrared Camera and Multi-Object Spectrometer) on the HST (Hubble Space Telescope). Before returning to Columbia's airlock, the astronauts, with a cloudy background, hold onto the orbiter and offer their thoughts on the significance of their mission, the HST, and spaceflight. Footage from flight day 9 includes the grappling, unbearthing, and deployment of the HST from Columbia, and the crew coordinating and videotaping Columbia's departure. Flight day 10 was a relatively inactive day, and flight day 11 includes a checkout of Columbia's aerodynamic surfaces. Columbia landed on flight day 12, which is covered by footage of the crew members speaking during reentry, and their night landing, primarily shown through the orbiter's head-up display. The video includes numerous views of the HST, as well as views of the the Galapagos Islands, Madagascar, and Southern Africa with parts of the Atlantic, Indian, and Pacific Oceans, and part of the coast of Chile. The pistol grip space tool is shown in use, and the crew answers two messages from the public, including a message to Massimino from the Fire Department of New York.

STS-109 Mission Highlights Resource Tape, Part 2 of 4, Flight Days 4 & 5
May 30, 2002; In English; 1 hr., 24 min., 50 sec. playing time, in color, with sound
Report No(s): JSC-1916; NONP-NASA-VT-2002137664; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This video, Part 2 of 4, shows the activities of the STS-109 crew (Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, James Newman, Richard Linnehan, Michael Massimino, Mission Specialists) during flight days 4 and 5. The activities from other flights days can be seen on 'STS-109 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139471), 'STS-109 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139476), and 'STS-109 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137577). The primary activities during these days were EVAs (extravehicular activities) to replace two solar arrays on the HST (Hubble Space Telescope). Footage from flight day 4 records an EVA by Grunsfeld and Linnehan, including their exit from Columbia's payload bay airlock, their stowing of the old HST starboard rigid array on the rigid array carrier in Columbia's payload bay, their attachment of the new array on HST, the installation of a new starboard diode box, and the unfolding of the new array. The pistol grip space tool used to fasten the old array in its new location is shown in use. The video also includes several shots of the HST with Earth in the background. On flight day 5 Newman and Massimino conduct an EVA to change the port side array and diode box on HST. This EVA is very similar to the one on flight day 4, and is covered similarly in the video. A hand operated ratchet is shown in use. In addition to a repeat of the previous tasks, the astronauts change HST's reaction wheel assembly, and because they are ahead of schedule, install installation and lubricate an instrument door on the telescope. The Earth views include a view of Egypt and Israel, with the Nile River, Red Sea, and Mediterranean Sea.

STS-109 Mission Highlights Resource Tape, Part 1 of 4, Flight Days 1 - 3

May 30, 2002; In English; 1 hr. playing time, in color, with sound

Report No(s): JSC-1916; NONP-NASA-VT-2002139471; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This video, Part 1 of 4, shows the activities of the STS-109 crew (Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, James Newman, Richard Linnehan, Michael Massimino, Mission Specialists) during flight days 1 through 3. The activities from other flight days can be seen on 'STS 109 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137664), 'STS 109 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139471), and 'STS-109 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137577). The main activity recorded during flight day 1 is the liftoff of Columbia. Attention is given to suit-up, boarding, and pre-flight procedures. The pre-launch crew meal has no sound. The crew members often wave to the camera before liftoff. The jettisoning of the solid rocket boosters is shown, and the External Tank is seen as it falls to Earth, moving over African dunes in the background. There are liftoff replays, including one from inside the cockpit. The opening of the payload bay doors is seen from the rear of the shuttle's cockpit. The footage from flight day 2 shows the Flight Support System for bearthing the HST (Hubble Space Telescope). Crew preparations for the bearthing are shown. Flight day 3 shows the tracking of and approach to the HST by Columbia, including orbital maneuvers, the capture of the HST, and its lowering onto the Flight Support System. Many views of the HST are shown, including one which reveals an ocean and cloud background as the HST retracts a solar array.

STS-109 Mission Highlights Resource Tape, Part 3 of 4, Flight Days 6 & 7

May 30, 2002; In English; 58 min., 54 sec. playing time, in color, with sound

Report No(s): JSC-1916; NONP-NASA-VT-2002139476; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This video, Part 3 of 4, shows the activities of the STS-109 crew (Scott Altman, Commander; Duane Carey, Pilot; John Grunsfeld, Payload Commander; Nancy Currie, James Newman, Richard Linnehan, Michael Massimino, Mission Specialists) during flight days 6 and 7. The activities from other flight days can be seen on 'STS-109 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139471), 'STS-109 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002137664), and 'STS-109 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002137577). Flight day 6 features a very complicated EVA (extravehicular activity) to service the HST (Hubble Space Telescope). Astronauts Grunsfeld and Linnehan replace the HST's power control unit, disconnecting and reconnecting 36 tiny connectors. The procedure includes the HST's first ever power down. The cleanup of spilled water from the coollant system in Grunsfeld's suit is shown. The pistol grip tool, and two other space tools are also shown. On flight day 7, Newman and Massimino conduct an EVA. They replace the HST's FOC (Faint Object Camera) with the ACS (Advanced Camera for Surveys). The video ends with crew members playing in the shuttle's cabin with a model of the HST.

On this eighth day of the STS-112 mission, the crew members of Atlantis (Commander Jeff Ashby; Pilot Pam Melroy; Mission Specialists Sandy Magnus, Piers Sellers, Dave Wolf, and Fyodor Yurchikhin) are seen preparing for the mission's third extravehicular activity (EVA). Magnus is shown reviewing instructions for operation of the International Space Station's (ISS) robot arm. Wolf and Sellers are seen successfully attaching cable connections to the S1 truss during the EVA. Scenes shown include: the ISS's robot arm, the Crew Equipment Translation Aid (CETA) cart and the deployment of the central radiator panel of the S1 truss.

On the first day of STS-112 the crew (Commander Jeff Ashby, Pilot Pam Melroy and Mission Specialists Sandy Magnus, Piers Sellers, David Wolf and Fyodor Yurchikhin) are shown preparing for launch at Kennedy Space Center, being transported to the Space Shuttle Atlantis at its launch pad, and being seated in the Orbiter. During the launch, the External Tank (ET) camera, mounted to the top of Atlantis's ET and aimed downward) will provide never before seen footage of the shuttle during lift-off. Following the final countdown and liftoff, the ET camera provides footage as Atlantis quickly

leaves the Earth behind, at speeds over 2,800 miles per hour. Following orbital insertion, the shuttle's payload bay doors are shown opening in footage provided by a payload bay camera. Sellers and Magnus narrate their thoughts during a replay of the initial launch sequence, shortly after entering orbit. Following the tape, they are shown in the crewcabin with the rest of the crew, and they each share brief thoughts.

During the third flight day of STS-112 (Commander Jeff Ashby, Pilot Pam Melroy and Mission Specialists Sandy Magnus, Piers Sellers, David Wolf and Fyodor Yurchikhin), the Space Shuttle Atlantis begins its final approach to the International Space Station (ISS) with which it will dock. The Chinese mainland is seen, at night, at a height of 242 statute miles. In one section of video from a camera onboard the ISS, Atlantis can be seen to be almost directly below the station, at a distance of several hundred feet. The orbiter's docking system is shown, as it is slowly guided by Ashby towards the forward docking port on the ISS's Destiny Laboratory Module and its forward docking port. Above the docking port, the S0 truss structure can be seen, to which the S1 truss structure in Atlantis' payload bay will be attached during this mission. Also seen are the Unity airlock and other modules. Following the completion of docking, in which an excellent shot of the docking system in hard dock is visible, the hatches between the two crafts are opened and the members of Atlantis are greeted by the very excited members of Expedition 5, who have been aboard the ISS for several months.

The STS-110 Flight Day 3 begins with a view from the flight deck of The Space Shuttle Atlantis. Commander Mike Bloomfield performs engine firing from Atlantis to meet with the International Space Station. The hatch between Space Shuttle Atlantis and the International Space Station opens and Expedition Four Commander Yury Onufrienko greets STS-110 Commander Michael Bloomfield and Mission Specialist Ellen Ochoa as they enter the station. Also, much live animation of the Space Shuttle Atlantis is presented, as seen from a camera aboard the I.S.S.

The STS-110 tenth flight day begins with a live view of the flight deck of The Space Shuttle Atlantis. Commander Michael Bloomfield, Pilot Stephen Frick, Mission Specialists Lee Morin, Jerry L. Ross, Steven Smith, Ellen Ochoa, and Rex Walheim are joined by Cosmonaut Yury Onufrienko and Flight Engineers Dan Bursch and Carl Walz. Commander Michael Bloomfield thanks everyone who participated in the STS-110 mission and who made it a success. Commander Bloomfield bids farewell to the Expedition four crew before undocking of the Space Shuttle Atlantis from the International Space Station. A live shot of Atlantis and the newly installed S0 truss is shown.

STS-111 Mission Highlights Resource Tape, Part 1 of 4, Flight Days 1 - 4

Aug. 02, 2002; In English; 1 hr., 20 min. playing time, in color, with sound

Report No(s): JSC-1930; NONP-NASA-VT-2002139357; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This video, Part 1 of 4, shows the activities of the STS-111 crew (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Phillipe Perrin, Mission Specialists) during flight days 1 through 4. Also shown are the incoming Expedition 5 (Valeri Korzun, Commander; Peggy Whitson, NASA ISS Science Officer; Sergei Treschev, Flight Engineer) and outgoing Expedition 4 (Yuri Onufriyenko, Commander; Carl Walz, Daniel Bursch, Flight Engineers) crews of the ISS (International Space Station). The activities from other flight days can be seen on 'STS-111 Mission Highlights Resource Tape' Part 2 of 4 (internal ID 2002139469), 'STS-111 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139468), and 'STS-111 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002139474). The primary activity of flight day 1 is the launch of Space Shuttle Endeavour. The crew is seen before the launch at a meal and suit-up, and some pre-flight procedures are shown. Perrin holds a sign with a personalized message. The astronauts communicate with Mission Control extensively after launch, and an inside view of the shuttle cabin is shown. The replays of the launch include close-ups of the nozzles at liftoff, and the fall of the solid rocket boosters and the external fuel tank. Flight day 2 shows footage of mainland Asia at night, and daytime views of the eastern USA and Lake Michigan. Flight day three shows the Endeavour orbiter approaching and docking with the ISS. After the night docking, the crews exchange greetings, and a view of the Nile river and Egypt at night is shown. On flight day 4, the MPLM (Multi-Purpose Logistics Module) Leonardo was temporarily transferred from Endeavour's payload bay to the ISS.

An overview of the STS-111 Endeavour mission is given through footage of each flight day. Scenes from flight days 8 through 10 show activities such as extravehicular activity (EVA) preparation, EVA activity to replace the wrist roll joint on the International Space Station's (ISS) robotic arm, logistics transfer operation, space suit check-out and loading of the Leonardo Multi-Purpose Logistics Module onto the Endeavour's cargo bay. Individual shots of Africa, Italy, Hispaniola, Mexico and the Strait of Gilbraltar are shown. For mission footage from flight days 1 to 7 and 11-14, see also, 'STS-111 Mission Highlights Resource Tape, Part 1', 'STS-111 Mission Highlights Resource Tape, Part 2' and 'STS-111 Mission Highlights Resource Tape, Part 4'.

This video, Part 2 of 4, shows the activities of the STS-111 crew (Kenneth Cockrell, Commander; Paul Lockhart, Pilot; Franklin Chang-Diaz, Phillipe Perrin, Mission Specialists) during flight days 5 through 7. Also shown are the incoming

Expedition 5 (Valeri Korzun, Commander; Peggy Whitson, NASA ISS Science Officer; Sergei Treschev, Flight Engineer) and outgoing Expedition 4 (Yuri Onufriyenko, Commander; Carl Walz, Daniel Bursch, Flight Engineers) crews of the ISS (International Space Station). The activities from other flight days can be seen on 'STS-111 Mission Highlights Resource Tape' Part 1 of 4 (internal ID 2002139357), 'STS-111 Mission Highlights Resource Tape' Part 3 of 4 (internal ID 2002139468), and 'STS-111 Mission Highlights Resource Tape' Part 4 of 4 (internal ID 2002139474). On flight day 5, the transfer and installation of a Power and Data Grapple Fixture onto the P6 Truss during an EVA (extravehicular activity) is shown. The relocation of micrometeorite debris shields is also shown. Canadarm 2 is used to move the Mobile Base System near the Mobile Transporter on the ISS Destiny Module. The capture of the Mobile Base System takes place on flight day 6, along with a crew transfer ceremony on board the ISS. The video includes a view of the South Pacific just before dawn, and the Endeavour crew answers questions from the public.

This video shows the activities of the STS-113 crew (Jim Wetherbee, Commander; Paul Lockhart, Pilot; Michael Lopez-Alegria, John Herrington, Mission Specialists) during flight day 3. The major tasks of flight day 3 were rendezvous and docking with the ISS (International Space Station), the transfer of the Expedition 6 crew (Kenneth Bowersox, Commander; Donald Pettit, Nikolai Budarin, Flight Engineers) to the ISS, and preparations for an EVA (extravehicular activity) sched-uled for the following day. The approach of Space Shuttle Endeavour to the ISS is shown in detail, including the firing of the Left Orbital Maneuvering System, and the aiming maneu-vers the orbiter makes to dock with the ISS. There are centerline views of the ISS before and during the final docking maneuver. The new ISS crew is received by the Expedition 5 crew (Valeri Korzun, Commander; Peggy Whitsun, Sergei Treschev; Flight Engineers), and the transfer of EVA suits is shown. Earth views include a pan along a reddish Earth limb, and the Pacific Ocean with Endeavour's Canadarm robotic arm in the foreground.

This video shows the activities of the STS-113 crew (Jim Wetherbee, Commander; Paul Lockhart, Pilot; Michael Lopez-Alegria, John Herrington, Mission Specialists) during flight day 5. The crew is seen together with the Expedition 5 (Valeri Korzun, Commander; Peggy Whitsun, ISS Science Officer/Flight Engineer; Sergei Treschev, Flight Engineer) and Expedition 6 (Kenneth Bowersox, Commander; Donald Pettit, Nikolai Budarin, Flight Engineers) crews of the ISS (International Space Station) preparing for an EVA (extravehicular activity) the following day, and performing tasks on board the ISS. The changing of valves on the ISS carbon dioxide removal assembly is shown. The STS-113 crew is seen together answering numerous questions from the general public, with Lopez-Alegria answering all but one. There is also a clip of Jay Leno congratulating Wetherbee on his fiftieth birthday. Inside views of the Endeavour orbiter and the ISS modules are shown, as well as a view of the coast of Chile.

This video shows the activities of the STS-113 crew (Jim Wetherbee, Commander; Paul Lockhart, Pilot; Michael Lopez-Alegria, John Herrington, Mission Specialists) during flight day 6. Also shown are the Expedition 5 (Valeri Korzun, Commander; Peggy Whitsun, ISS Science Officer/Flight Engineer; Sergei Treschev, Flight Engineer) and Expedition 6 (Kenneth Bowersox, Commander; Donald Pettit, Nikolai Budarin, Flight Engineers) crews of the ISS (International Space Station). The primary activity of flight day 6 is the outfitting of the P1 (Port 1) Truss Structure. The suiting up and departure of Lopez-Alegria and Herrington through the ISS Quest airlock is shown. The departure is shown through sequential still video. The ISS CETA handrail cart is shown in use, as is a pistol-grip space tool. At the end of the EVA, the astronauts are shown cleaning up outside the ISS. The video also contains a Thanksgiving message about the importance of technological advances in spaceflight, and footage of the Moon disappearing behind the Earth's limb.

This video shows the activities of the STS-107 crew (Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark, Mission Specialists, Ilan Ramon, Payload Specialist) during flight day 8 of the Columbia orbiter's final flight. The primary activities of flight day 8 are spaceborne experiments. Some background information is given on the SOFBALL (Structure of Flame Balls at Low Lewis-Number) microgravity experiment as footage of the flame balls is shown. The video also shows the MEIDEX (Mediterranean Israeli Dust Experiment) calibrating on the Moon. The six STARS (Space Technology and Research Students) international student experiments are profiled, including experiments on carpenter bees (Liechtenstein), spiders (Australia), silkworms (China), ants (USA), crystal growth (Israel), and fish embryos (Japan). A commercial experiment on roses is also profiled. Astronaut Clark gives a tour of the SpaceHab RDM (Research Double Module), in the space shuttle's payload bay. Astronauts McCool and Ramon take turns on an exercise machine. The video includes a partly cloudy view of the Pacific Ocean.

This video shows the activities of the STS-107 crew (Rick

Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark, Mission Specialists; Ilan Ramon, Payload Specialist) during flight day 7 of the Columbia orbiter's final flight. The primary activities of flight day 7 are setting up and conducting spaceborne experiments in the SpaceHab RDM (Research Double Module) in the orbiter's payload bay. Silkworms and ants from the STARS (Space Technology and Research Students) international student experiments are shown. Footage of the Mediterranean Sea taken by the MEIDEX (Mediterranean Israeli Dust Experiment) is also shown. Canisters containing experiments attached to the SpaceHab RDM are shown in the space shuttle's payload bay. Other views include the Earth's surface, and the Earth's atmosphere, visible along its limb.

This video shows the activities of the STS-107 crew (Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark, Mission Specialists; Ilan Ramon, Payload Specialist) during flight day 9 of the Columbia orbiter's final flight. The primary activities of flight day 9 are spaceborne experiments. The video shows a commercial experiment on roses, a partial view of Africa from Libya to the Horn of Africa through the MEIDEX (Mediterranean Israeli Dust Experiment), and the FAST (Facility for Absorption and Surface Tension) experiment. The STARS (Space Technology and Research Students) international student experiments are shown. The preliminary results of these experiments on the effects of microgravity on silkworms, spiders, crystal growth, fish embryos, carpenter bees, and ants are discussed. The video includes a view of southern Spain and the Mediterranean Sea.

This video shows the activities of the STS-107 crew (Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark, Mission Specialists; Ilan Ramon, Payload Specialist) during flight day 10 of the Columbia orbiter's final mission. Flight day 10 includes an interview by Mission Control of astronauts Brown, McCool, and Anderson, who answer questions on the mission's spaceborne experiments, as well as biographical and other questions. Much of the video is shot and narrated by Payload Specialist Ramon, who shows the crew members at work on experiments in the SpaceHab RDM (Research Double Module), and performing other tasks. Experiments featured in the video include SOFBALL (Structure of Flame Balls at Low Lewis-Number), the STARS (Space Technology and Research Students) experiments, and experiments on cancer and osteoporosis. Crew activities shown include making a video of Earth, and preparing for sleep. Earth views shown in the video include the Gulf of Aden, Ghana, Lake Chad, and the coast of North Carolina.

Stephen Robinson, Mission Specialist 2 (MS2), of the STS-114 space mission is seen during a prelaunch interview. He discusses his duties as flight engineer, Extravehicular Activity 2 (EVA 2) spacewalker, and medical officer. Robinson answers questions about his interests in spaceflight and the specific goals of the mission. He identifies this mission as the International Space Station Resupply Mission because supplies and experiments are brought to the International Space Station and Expedition 6 crew of Commander Kenneth Bowersox, and Flight Engineers Donald Pettit and Nikolai Budarin are returning to Earth. Lastly, he talks about the docking of the Space Shuttle Atlantis with the International Space Station. He looks forward to this experience in space.

Soichi Noguchi, Mission Specialist 1 (MS1) representing Japan's National Space Development Agency (NASDA) is seen during a prelaunch interview. He discusses the main goals of this flight which are to take expedition 7 to the International Space Station and bring back expedition 6 to the Earth. He is

also responsible for all Extravehicular (EVA) work on this mission. Expedition seven includes: Mission Specialist and Commander Yuri Malenchenko; NASA ISS Science Officer Edward Lu; and Flight Engineer Alexander Kaleri. Expedition Six includes: Commander Kenneth Bowersox; NASA ISS Science Officer Donald Petit; and Flight Engineer Nikolai Budarin. Noguchi explains the Utilization and Logistics Flight 1 (ULF1) Mission which entails the exchange of crewmembers, various supplies and experiments and the replacement of a control component on the International Space Station. This is also will be Soichi Noguchi's first spacewalk.

Pilot James M. Kelly, Lieutenant Colonel USAF, is shown during a prelaunch interview. He expresses the major goals of the mission which are to replace the Expedition Six crew of the International Space Station (ISS), install the Raffello Multi-Purpose Logistics Module, deliver the External Stowage Platform to the ISS, and replace the Control Moment Gyroscope (CMG). The major task that he has is to be the backup pilot for Commander Eileen Collins. He talks about the three new research racks brought up to the International Space Station inside the U.S. Destiny Laboratory along with the Window Observational Research Facility (WORF), Human Research Facility 2 (HRF-2), and a Minus Eighty Degree Laboratory Freezer (MELF-1). Kelly also explains how he uses the ISS' Robotic arm to lift the MPLM out of Atlantis' payload bay and attach it to the Unity node to unload hardware, supplies and maintenance items. This will be his second trip to the International Space Station.

This video shows the activities of the STS-107 crew on flight day 6 of the Columbia orbiter's final mission. The crew members include: Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark; Mission Specialists; Ilan Ramon, Payload Specialist. The primary activities of flight day 6 are spaceborne experiments, and a conversation between Israeli Prime Minister Ariel Sharon, accompanied by the Israeli Minister of Education, and Israeli astronaut Ilan Ramon. Both the Israelis and their interpreter are audible on the tape. The video also features a bioreactor used to grow cancer cells in microgravity, and footage taken by the Mediterranean Israeli Dust Experiment (MEIDEX) of sprites, lightning in the lower ionosphere. Mission Specialist Anderson is shown working on the Laminar Soot Processes (LSP-2) experiment. Pilot McCool answers two questions from the public, and a view of Panama is shown.

This video shows the activities of the STS-107 crew on flight day 13 of the Columbia orbiter's final mission. The crew members include: Rick Husband, Commander; William McCool, Pilot; Kalpana Chawla, David Brown, Michael Anderson, Laurel Clark, Mission Specialists; Ilan Ramon, Payload Specialist. The primary activities of flight day 13 are spaceborne experiments, including troubleshooting undertaken by Mission Specialist Chawla on the Water Mist Fire Suppression (MIST) experiment. Chawla performs troubleshooting tasks relayed to her by Mission Control. She shows Mission Control the location of air and water in a transparent hose that is part of the atomizer on the exterior of the combustion module. She also changes the atomizer head. All six Space Technology and Research Students (STARS) experiments are profiled in the video. These experiments are on ants, crystal growth in a chemical garden, fish embryos, carpenter bees, spiders, and silkworms. The video also includes a view of the southeast Texas coast near Houston, and a view of Portugal, Spain, Gibraltar, Morocco, and the Sahara Desert. The video ends with an explanation of roses at Mission Control which commemorate astronauts who have died on missions.

This video shows the activities of the STS-107 crew on flight day 14 of the Columbia orbiter's final mission. The crew includes Commander Rick Husband, Pilot William McCool, Mission Specialists Kalpana Chawla, David Brown, Michael Anderson, and Laurel Clark, and Payload Specialist Ilan Ramon. Most of the video shows a press conference on board Columbia featuring all seven astronauts. Reporters ask the crew members questions, who reply via a handset. Most of the questions cover life in space and the mission's spaceborne experiments. Each astronaut answers multiple questions, and in response to one of the questions, each of the seven describes an 'O Wow!' moment. The remainder of the video consists of a tour of the orbiter, including the flight deck, mid-deck, and the SpaceHab Research Double Module (RDM) in the payload bay. Mission Specialist Chawla demonstrates eating at the shuttle's galley, and Commander Husband shows his toiletries. In the RDM, Mission Specialist Clark exercises on a machine for an experiment on respiration.

This video shows the activities of the STS-107 crew on flight day 15 of the Columbia orbiter's final mission. The crew includes Commander Rick Husband, Pilot William McCool, Mission Specialists Michael Anderson, David Brown, Laurel Clark, and Kalpana Chawla, and Payload Specialist Ilan Ramon. The primary activities of flight day 15 are crew interviews, and operating the Water Mist Fire Suppression (MIST) experiment. Early in the video, astronauts McCool and Ramon respond together to a question. Much of the video is taken up by an interview of astronauts Brown, Anderson, and McCool. Two parts of the video show the MIST experiment in operation, operated the first time by astronaut Brown. Another part of the video is narrated by Mission Specialist Clark, who identifies views of Mount Vesuvius, and an atoll in the south Pacific. In this part, Payload Specialist Ramon is seen on an exercise machine, Commander Husband shows body fluid samples from the crew taken during the mission, and Clark demonstrates how the crew eats meals. The video ends with footage from earlier in the mission which shows a deployed radiator in the shuttle's payload bay that reflects an image of the Earth.

This video shows the activities of the STS-107 crew on flight day 1 of the Columbia orbiter's final mission. The crew includes Commander Rick Husband, Pilot William McCool, Mission Specialists Michael Anderson, David Brown, Laurel Clark, and Kalpana Chawla, and Payload Specialist Ilan Ramon. The video begins with a view of the space shuttle on its launch pad, while an announcer gives an overview of the mission, including its spaceborne experiments. The announcer then introduces the crew members, listing their previous experience. They are seen seated at a banquet table, and during suit up. The seating of the crew in the orbiter is shown, as are other prelaunch procedures. Dialog from during the launch is audible on the tape, and the video includes views of the ascent from different angles, as well as booster separation. The video ends with a view of Columbia in orbit, showing the Research Double Module (RDM) on the inside of its payload bay.

Commander Eileen Collins of the STS-114 space mission is seen during a pre-launch interview. She answers questions about the primary goals of the mission which are to exchange the expedition six and expedition seven crews. Also, she says that a large amount of logistics will be taken up to the International Space Station. The primary payload on this mission include: 1) The Utilization and Logistics Flight-1 (ULF-1); 2) Raffaello Multi-Purpose Logistics Module (MPLM); and 3) External Stowage Platform (ESP-2) which are all explained in detail by the Commander. The Window Observational Research Facility (WORF) rack, Human Research Facility (HRF) rack, Minus Eighty Degree Laboratory Freezer (MELF) and EXPRESS rack are the Space Station equipment to be installed on the International Space Station (I.S.S.). Collins is the Intravehicular Activity (IVA) specialist for this mission who oversees the three Extravehicular Activity (EVA)'s performed by Mission Specialists Soichi Noguchi and Stephen Robinson. The three EVA's include an external camera installation, positioning devices for an ammonia system and the installation of Floating Potential Measuring Unit (FPMU). Commander Collins expresses that she wants to have a successful mission, and also wants to see the Earth from space.

This video, Part 1 of 3, shows the activities of the STS-112 crew on flight days 1 - 3. The crew included Commander Jeff Ashby, Pilot Pam Melroy, and Mission Specialists Sandy Magnus, David Wolf, Piers Sellers, and Fyodor Yurchikhin. Flight day 1 begins with an introduction of the astronauts, seen during their pre-flight banquet, and suit-up. The ingress of some of the crew into the Space Shuttle Atlantis is shown. The launch footage includes the view from a camera mounted on the shuttle's external fuel tank, as well as replays. The separation of the shuttle's booster rockets is also shown. On flight day 2 a view of the payload bay and orbiter docking mechanism on Atlantis is shown from a camera on the shuttle's robotic arm. The footage of flight day 3 includes the docking of Atlantis and the International Space Station (ISS), and the exchange of greetings between the two spacecrews. Views of Earth include a pass over the western USA on flight day 2, and a night view of China on flight day 3.

STS-113 Post Flight Presentation
Jan. 23, 2002; In English; 22 min., 24 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2003018356; JSC-1945; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The STS-113 post-flight presentation begins with a view of Mission Specialists Michael E. Lopez-Alegria and John B. Herrington getting suited for the space mission. The STS-113 crew consists of: Commander James D. Wetherbee, Pilot Paul Lockhart, Mission Specialists Michael Lopez-Alegria and John Herrington. Cosmonauts Valery Korzun, and Sergei Treschev, and astronaut Peggy Whitson who are all members of the expedition five crew, and Commander Kenneth Bowersox, Flight Engineers Nikolai Budarin and Donald Pettit, members of Expedition Six. The main goal of this mission is to take Expedition Six up to the International Space Station and Return Expedition Five to the Earth. The second objective is to install the P(1) Truss segment. Three hours prior to launch, the crew of Expedition Six along with James Wetherbee, Paul Lockhart, Michael Lopez-Alegria and John Herrington are shown walking to an astrovan, which takes them to the launch pad. The actual liftoff is presented. Three Extravehicular Activities (EVA)'s are performed on this mission. Michael Lopez-Alegria and John Herrington are shown performing EVA 1 and EVA 2 which include making connections between the P1 and S(0) Truss segments, and installing fluid jumpers. A panoramic view of the ISS with the Earth in the background is shown. The grand ceremony of the crew exchange is presented. The astronauts performing everyday duties such as brushing teeth, washing hair, sleeping, and eating pistachio nuts are shown.

The actual landing of the Space Shuttle is presented.

An overview of the STS-112 Mission is presented. The fourth flight day begins with a view inside of the Destiny Laboratory of the International Space Station where Expedition Five Commander Valery Korzun is shown. The robotics workstation where Mission Specialist Sandra Mangus and Flight Engineer Peggy Whitson operate Canadarm 2 to lift the S(1) Truss segment out of the payload bay of the Space Shuttle Atlantis and maneuver it for installation onto the S(1) Truss is presented. Mission Specialist Piers Sellers is shown preparing for his six and one half hour spacewalk by performing breathing exercises. Animation of the installation of the S(1) Truss, and also the unbirthing of the S(1) truss is also presented. Mission Specialists David Wolf and Piers Sellers are shown getting suited for their spacewalks. During the spacewalk, David Wolf is removing the antenna assembly from its launched position and Piers Sellers is releasing launch restraints from the Radiator Beam Assembly. A beautiful view of the coast of Texas is captured during this spacewalk. Flight day five shows pilot Pam Melroy and Mission Specialist Dave Wolf working inside of the International Space Station's Quest Airlock. Flight day six is shown with Dave Wolf and Piers Sellers exiting their spacesuits inside of the Quest Airlock Module after a successful spacewalk. This presentation ends with views of the International Space Station's installed S(1) Truss, rotation of the radiator assembly and the radiator's coolant tubing.

STS-112 Mission Highlights Resource, Part 3 of 3
Jan. 22, 2003; In English; 38 min., 40 sec. playing time, in color, with sound
Report No(s): JSC-1942; NONP-NASA-VT-2003009346; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The STS-112 Mission begins with a view of the center radiator on the S(1) Truss. A good view of the International Space Station's (ISS) Destiny Laboratory, Soyuz Crew Return Vehicle and Quest Airlock are shown from a video camera located at the end of the S(1) Truss Segment. The ISS Canadarm 2 is shown getting in position for spacewalk three. Highlights of flight day eight begin with Pilot Pam Melroy and Mission Specialist Fyodur Yurchikhin shown inside of the Quest Airlock closing the hatch as spacewalkers David Wolf and Piers Sellers move in the outer compartment of the Airlock to begin Extravehicular Activity 3 (EVA 3). During EVA 3, Dave Wolf and Piers Sellers are installing spool positioning devices on ammonia lines located on the ISS. Robot Arm Operators Peggy Whitson and Sandy Magnus are shown reviewing procedures for operating the robot arm. A view of Piers Seller climbing back into the Quest Airlock is presented. During flight day nine, robot arm operators Pam Melroy, Jeff Ashby and Peggy Whitson are in the process of removing spacesuits worn by David Wolf and Piers Sellers. A final farewell of the nine crewmembers shown inside of the Destiny Laboratory is presented during flight day ten. The undocking of Space Shuttle Atlantis from the International Space Station is shown on flight day eleven. This presentation ends on flight day 12 with a view of head up displays and the actual landing of the Space Shuttle Atlantis.

STS-100 Photo-op/Shut-up/Depart O&C/Launch Endeavour On Orbit/Landing/Crew Egress
May 1, 2001; In English; 1 hr, 8 min, with color and sound; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

This video shows an overview of crew activities from STS-100. The crew of Space Shuttle Shuttle Endeavour includes: Commander Kent Rominger; Pilot Jeffrey Ashby; and Mission Specialists Chris Hadfield, John Phillips, Scott Parazynski, Umberto Guidoni, and Yuri Lonchakov. Sections of the video include: Photo-op; Suit-up; Depart O&C; Ingress; Launch with Playbacks; On-orbit; Landing with Playbacks; Crew Egress & Departure. Voiceover narration introduces the astronauts at their pre-flight meal, and continues during the video, except for the launch and landing sequences. Launch playback views include: NEXT; Beach Tracker; VAB; PAD-A; Tower-1; UCS-15; Grandstand; OTV-60; OTV-70; OTV-71; DOAMS; UCS-10 Tracker; UCS-23 Tracker; On-board Ascent Camera. The On-orbit section of the video shows preparations for an extravehicular activity (EVA) to install Canadarm 2 on the International Space Station (ISS). Preparation for docking with the ISS, and the docking of the orbiter and ISS are shown. The attachment of Canadarm 2 and the Raffaello Logistics Module, a resupply vehicle, are shown. The crew also under-

takes some maintenance of the ISS. Landing playback views include: TV-1; TV-2; LRO-1; LRO-2; PPOV.

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress
December 05, 1997; In English; 1 hr, 2 min., with color and audio; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

The STS-87 Space Shuttle Columbia mission begins with the introduction of the seven crew members. The seven crew members include: Commander Kevin R. Kregel, pilot Steven W. Lindsey, mission specialists: Winston E. Scott, Kalpana Chawla and Takao Doi and payload specialist Leonid K. Kadenyuk. The USA Microgravity Payload (USMP-4), Orbital Acceleration Research Experiment (OARE), the EVA Demonstration Flight Test 5 (EDFT-05), Shuttle Ozone Limb Sending Experiment (SOLSE), Loop Heat Pump (LHP), and Sodium Sulfur Battery Experiment (NaSBE) were all shown during this video presentation. The launch of the STS-87 from different Kennedy Space Flight Center (KSFC) areas and Pre-flight training at the Johnson Space Center is presented. The retrieve and recovery spot satellite are also shown. Also, the landing of the Space Shuttle Columbia is presented from different areas at Kennedy Space Flight Center.

STS-102 Photo-op/Suit-up/Depart O&C/Launch Discovery On Orbit/Landing/Crew Egress
March 22, 2001; In English; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

The spacecrews of STS-102 and the Expedition 1 and 2 crews of the International Space Station (ISS) are seen in this video, which presents an overview of their activities. The crew consists of Commander Jim Wetherbee, Pilot James Kelly, and Mission Specialists Andrew Thomas, and Paul Richards. The sections of the video include: Photo-op, Suit-up, Depart O&C, Ingress, Launch with Playbacks, On-orbit, Landing with Playbacks, and Crew Egress & Departs. The prelaunch activities are explained by two narrators, and the crew members are assisted in the White Room just before boarding the Space Shuttle Discovery. Isolated views of the shuttle's launch include: VAB, PAD-B, DLTR-3, UCS-23 Tracker, PATRICK IGOR, UCS-10 Tracker, Grandstand, Tower-1, OTV-160, OTV-170, OTV-171, and On-board Camera. The video shows two extravehicular activities (EVAs) to perform work on the ISS, one by astronauts Helms and Voss from Expedition 2, and another by Richards and Thomas. The attachment of the Leonardo Multipurpose Logistics Module, a temporary resupply module, is shown in a series of still images. The on-orbit footage also includes a view of the Nile River, and a crew exhange ceremony between Expedition 1 (Commander Yuri Gidzenko, Flight Engineer Sergei Krikalev) and Expedition 2 (Commander Yury Usachev, Flight Engineers James Voss, Susan Helms). Isolated views of the landing at Kennedy Space Center include: North Runway Camera, VAB, Tower-1, Midfield, Midfield IR, Tower-2, and UCS-12 IR. The Crew Transfer Vehicle (CTV) for unloading the astronauts is shown, administrators greet the crew upon landing, and Commander Wetherbee gives a briefing.

STS-112/Atlantis/ISS 9A Pre-Launch - Launch On-Orbit - Landing - Crew Egress
October 18, 2002; In English; 1 hr, 3 min. playing time, in color with audio; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

The video starts with an introduction of the crew of Space

Shuttle Atlantis on STS-112 at their customary pre-flight meal. The crew consists of Commander Jeffrey Ashby, Pilot Pam Melroy, and Mission Specialists David Wolf, Sandra Magnus, Piers Sellers, and Fyodor Yurchikhin. The crew is then shown during suit-up, while exiting the Operations and Checkout Building to board the Astrovan, and during ingress and seating. Launch views include: Beach Tracker, VAB, PAD-B, Tower-1, DLTR-3, Grandstand, Cocoa Beach DOAMS, Playalinda DOAMS, UCS-23, OTV-170, OTV-171, and External Tank Camera. On-orbit footage includes the Atlantis orbiter docking with the ISS (International Space Station). The video shows clips of extravehicluar activities (EVAs), and some of the tasks performed during the mission. Footage included shows the installation of the S1 Truss onto the ISS with the Space Station Remote Manipulator System (Canadarm 2), Canadarm 2 carrying the Ammonia Tank Assembly prior to connection, the checkout of the Thermal Radiator Rotary Joint, the soft docking of an S-Band antenna, and the deployment of the S1 Radiator. An onboard repair of the ISS humidity separator is also shown. Landing views include: VAB, Tower 1, Mid-Field, Runway South End, Runway North End, Tower-2, Cocoa Beach DOAMS, and PPOV. Kennedy Space Center managers greet the crew upon arrival, and Commander Ashby gives a brief speech while standing with his crew members.

STS-92 Meal - Suit up - Depart O&C - Launch Discovery On Orbit - Landing - Crew Egress
October 24, 2000; In English; 60 min, with color and sound; No Copyright; Avail: CASI; V03, Videotape-VHS; B03, Videotape-Beta

The video begins with the introduction of the crew of Space Shuttle Discovery on STS-92, at their customary pre-flight meal. The crew consists of Commander Brian Duffy, Pilot Pamela Melroy, and Mission Specialists Leroy Chiao, William McArthur, Peter 'Jeff' Wisoff, Michael Lopez-Alegria, and Koichi Wakata. The introduction and suit-up of the astronauts, and their departure in the Astrovan are shown at a quick pace. The video shows in detail the seating of the crew and each astronaut's final preparations in the White Room prior to boarding. Views of Discovery's night launch include: SLF Convoy, Beach Tracker, VAB, Pad Perimeter, Tower-1, UCS-15, Press Site, UCS-23, OTV-61, OTV-70, OTV-71, and the In-Cabin Ascent Camera. While in orbit, the Discovery orbiter docks with the International Space Station (ISS). The docking is shown in a series of still images. The video includes clips from four extravehicular activities (EVAs). The crew members who performed the EVAs comment on them while speaking to Mission Control. During the EVAs, the Z1 Truss and an antenna are attached to the ISS. The crew members on the fourth EVA test jet packs. Views of landing include: TV-1, TV-2, TV-3, LRO-1, and HUD.

STS-113/Endeavour/ISS 11A Pre-Launch - Launch On Orbit - Landing - Crew Egress
December 07, 2002; In English; 1 hr., 27 min.; with color and audio; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

The crew of STS-113 and the Expedition 6 crew of the International Space Station (ISS) are introduced leaving the suitup room and while being assisted in their seats onboard Space Shuttle Endeavour. The shuttle's crew consisted of Commander Jim Wetherbee, Pilot Paul Lockhart and Mission Specialists Michael Lopez-Alegria and John Herrington. The Expedition 6 crew consisted of Commander Ken Bowersox, Flight Engineer Nikolai Budarin and NASA ISS Science Officer Don Pettit. Clips of the Endeavour's night launch are shown from these cameras: Beach Tracker, VAB, Pad A, OTV-60, OTV-70, Tower 1, UCS-15, Press Site Grandstand, Cocoa Beach DOAMS, Playalinda Beach DOAMS, UCS-23, and the In-Cabin Camera. While on-orbit, highlights include the docking of Endeavour with the ISS, the Change of Command Ceremony by the Expedition 5 and 6 crews of the ISS, the mating of the P1 and S0 Trusses, and three extravehicular activities (EVAs) by astronauts Lopez-Allegria and Herrington. The shuttle crew also repairs a leak in the onboard Carbon Dioxide Removal Assembly. Clips of the shuttle's landing are shown from these cameras: VAB, Tower 1, Midfield, Runway South End, Runway North End, Tower 2, Playalinda DOAMS, UCS-3 Infrared, UCS-23, Midfield Infrared, and Pilot Point of View (PPOV).

STS-110/Atlantic/ISS 8A Pre-Launch On Orbit-Landing-Crew Egress
April 19, 2002; In English; 1 hr. 27 min, with color and sound; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

The crew of STS-110, which consists of Commander Michael Bloomfield, Pilot Stephen Frick, and Mission Specialists Rex Walheim, Ellen Ochoa, Lee Morin, Jerry Ross, and

Steven Smith is introduced at the customary pre-flight meal. The narrator provides background information on the astronauts during suit-up. Each crew member is shown in the White Room before boarding Space Shuttle Atlantis, and some display signs to loved ones. Launch footage includes the following replays: Beach Tracker, VAB, Pad B, Tower 1, DLTR-3, Grandstand, Cocoa Beach DOAMS, Playalinda DOAMS, UCS-23, SLF Convoy, OTV-154, OTV-163, OTV-170 (mislabeled), and OTV-171 (mislabeled). After the launch, NASA administrator Sean O'Keefe gives a speech to the Launch Control Center, with political dignitaries present. While on-orbit, Atlantis docks with the International Space Station (ISS), and Canadarm 2 on the ISS lifts the S0 Truss out of the orbiter's payload bay. The video includes highlights of three extravehicular activities (EVAs). In the first, the S0 Truss is fastened to the Destiny Laboratory Module on the ISS. During the third EVA, Walheim and Smith assist in the checkout of the handcart on the S0 Truss. The Atlantis crew is shown gathered together with the Expedition 4 crew of the ISS, and again by itself after undocking. Replays of the landing include: VAB, Tower 1, Mid-field, Runway South End, Runway North End, Tower 2, Playalinda DOAMS, Cocoa Beach DOAMS, and Pilot Point of View (PPOV). After landing, Commander Bloomfield lets each of his crew members give a short speech.

Report No(s): JSC1946; No Copyright; Avail: CASI; V04, Videotape-VHS; B04, Videotape-Beta

This video, Part 2 of 4, shows the activities of the crew of the Space Shuttle Endeavor on flight days 4-6 of STS-113. The crew consists of Commander Jim Wetherbee, Pilot Paul Lockhart, and Mission Specialists Michael Lopez-Alegria and John Herrington. On flight day 4, The P1 truss was transfered from Canadarm on Endeavour to Canadarm 2 on the ISS, and aligned with the S0 Truss for attachment. The mission specialists connected utility cables between the trusses on an extravehicular activity (EVA). Flight day 5 was Commander Wetherbee's 50th birthday, and the video includes a clip from The Tonight Show in which Jay Leno wishes him a happy birthday. Intravehicular activity on flight day 5 includes Peggy Whitsun of the outgoing Expedition 5 crew of the International Space Station (ISS) showing incoming Expedition 6 crew members Ken Bowersox and Don Pettit how to replace valves on the ISS CO2 removal system. The video also includes an interior tour of Endeavour and the ISS, and an brief exterior tour of the ISS. On flight day 6 Lopez-Alegria and Herrington attach a television antenna to the P1 truss, and are shown using a handcart on the truss several times. The video includes several Earth views, including one of the west coast of South America.

STS-105/Discovery/ISS 7A.1: Pre-Launch Activities, Launch, Orbit Activities and Landing
August 10, 2001; In English; 60 Mins. playing time, in color, with sound; No Copyright; Avail: CASI; V03, Videotape-VHS; B03, Videotape-Beta

The crew of Space Shuttle Discovery on STS-105 is introduced at their pre-launch meal and at suit-up. The crew members include Commander Scott Horowitz, Pilot Rick Sturckow, and Mission Specialists Patrick Forrester and Daniel Barry, together with the Expedition 3 crew of the International Space Station (ISS). The Expedition 3 crew includes Commander Frank Culbertson, Soyuz Commander Vladimir Dezhurov, and Flight Engineer Mikhail Tyurin. When the astronauts depart for the launch pad in the Astrovan, their convoy is shown from above. Upon reaching the launch pad, they conduct a walk around of the shuttle, display signs for family members while being inspected in the White Room, and are strapped into their seats onboard Disciovery. The video includes footage of Discovery in the Orbiter Processing Facility, and some of the pre-launch procedures at the Launch Control Center are shown. The angles of launch replays include: TV-1, Beach Tracker, VAB, Pad A, Tower 1, UCS-15, Grandstand, OTV-70, Onboard, IGOR, and UCS-23. The moment of docking between Discovery and the ISS is shown from inside Discovery's cabin. While in orbit, the crew conducted extravehicular activities (EVAs) to attach an experiments container, and install handrails on the Destiny module of the ISS. The video shows the docking and unloading of the Leonardo Multipurpose Logistics Module (MPLM) onto the ISS. The deployment of a satellite from Discovery with the coast of the Gulf of Mexico in the background is shown. Cape Canaveral is also shown from space. Landing replays include VAB, Tower 1, mid-field, South End SLF, North End SLF, Tower 2, Playalinda DOAMS, UCS-23, and Pilot Point of View (PPOV). NASA Administrator Dan Goldin meets the crew upon landing and participates in their walk around of Discovery. The video concludes with a short speech by commander Horowitz.

This video, part 1 of 4, shows the activities of the crew of Space Shuttle Endeavour during flight days 1-3 of STS-113. The crew consists of Commander Jim Wetherbee, Pilot Paul Lockhart, Mission Specialists Michael Lopez-Alegria and John Herrington. With them were the Expedition 6 crewmembers of the International Space Station (ISS), Ken Bowersox, Nikolai Budarin, and Don Pettit. Pre-launch procedures are shown, and the rain-delayed night launch is shown from several camera angles. On flight day 2 there was a check out of the Canadarm on Endeavour, and some intravehicular activity. Flight day 3 highlights the docking of Endeavour and the ISS, and preparation for an extravehicular activity (EVA) the following day. Earth views include the English Channel at night with a close-up of London, the coast of Ecuador, and some views of Endeavour with the Earth in the background.

This video, part 3 of 4, shows the activities of the crew of Space Shuttle Envdeavour and the Expedition 5 and 6 crews of the International Space Station (ISS) during flight days 7 through 11 of STS-113. Endeavour's crew consists of Commander Jim Wetherbee, Pilot Paul Lockhart, and Mission Specialists Michael Lopez-Alegria and John Herrington. Footage of flight day 7 includes a change of command ceremony on board the ISS, and Endeavour dumping supply water through a nozzle. On flight day 8 the Space Station Mobile Transporter jams while traveling on the P1 truss of the ISS, and Herrington attempts to free it as part of a lengthy extravehicular activity (EVA) with Lopez-Alegria. Flight day 9 is the last full day the three crews spend together. Expedition 5 NASA ISS Science Officer Peggy Whitsun troubleshoots the Microgravity Glovebox on board the ISS with her successor Don Pettit. The undocking of Endeavour and the ISS is the main activity of flight day 10. Endeavour also deploys a pair of experimental tethered microsatellites for the Department of Defense. The footage from flight day 11 shows the Expedition 5 crew exercising, laying in recumbant seats to help them adjust to the gravity on Earth, and sleeping. The video includes numerous views of the earth, some with the ISS and Endeavour in the foreground. There are close-ups of Italy, Spain and Portugal, Tierra del Fuego, and Baja California, and a night view of Chicago and the Great Lakes.

This video, Part 1 of 4, shows the activities of the STS-107 crew during flight days 1 through 3 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. Before launch on flight day 1 the astronauts are seen at their pre-flight banquet, during suit-up, and while being seated on the orbiter. David Brown takes footage of the space shuttle's external tank after it is jettisoned. The video includes replays of the launch from several angles. The onboard views of launch are narrated by William McCool and Kalpana Chawla. On flight days 2 and 3 student microgravity experiments in the SpaceHab module in the shuttle's payload bay are profiled. These experiments address microgravity effects on crystal growth, ants, bees, fish embryos, silkworms, and spiders. Other experiments profiled include the Mediterranean Israeli Dust Experiment (MEIDEX), FAST (surface tension of bubbles), SOLS (Ozone), an experiment to culture prostate cancer cells in a bioreactor, and a commercial plant growth experiment. Earth views include lightning at night, and a view of the Strait of Gibraltar, including Spain and Morocco.

This video, Part 2 of 4, shows the activities of the STS-107 crew during flight days 4 through 7 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. During the video the crew members are at work on a variety of spaceborne experiments, such as the Laminar Soot Processes (LSP) experiment, the Mediterranean Israeli Dust Experiment (MEI-

DEX), international student experiments, and the Structures of Flame Balls at Low Lewis-number (SOFBALL) experiment. Other crew activities recorded on the video include exercising on a bicycle, drawing blood, and answering questions from the public. A couple of scenes on the video are narrated by Clark, including one in which she gives a tour of the SPACEHAB module in the shuttle's payload bay. The video also includes a scene in which Israeli Prime Minister Ariel Sharon addresses Ramon and the other Red Team crew members (Husband, Chawla, Clark). The Earth views shown include Saudi Arabia and the Persian Gulf; the Appalachian Mountains; Egypt, the Red Sea, and the Sinai Peninsula, and the east coast of Africa. CASI

STS-107 Mission Highlights Resource, Part 3 of 4

[2003]; In English; 55 min., 39 sec. playing time, in color, with sound

Report No(s): JSC-1952; No Copyright; Avail: CASI; V03, Videotape-VHS; B03, Videotape-Beta

This video, Part 3 of 4, shows the activities of the STS-107 crew during flight days 9 through 12 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. On flight day 9 David Brown and other crew members are at work on experiments in the Spacehab research module, and imagery is shown from the Mediterranean Israeli Dust Experiment (MEIDEX) on a pass over North Africa and the Horn of Africa. Ilan Ramon narrates part of the footage from flight day 10, and intravehicular activities of the astronauts onboard Columbia are shown, as well as views of the Gulf of Aden, and Lake Chad, which is seen with the back of the orbiter in the foreground. Rick Husband narrates the footage from day 11, which includes cleaning duties and maintenance, as well as an excellent view of the Sinai Peninsula, Israel, and Jordan, as well as the Mediterranean Sea, Red Sea, and Gulf of Aqaba. The highlight of flight day 12 is a conversation between Columbia's crew and the crew of the International Space Station (ISS). A special section of Earth views at the end of the video shows: 1) Atlantic Ocean, Strait of Gibraltar, Mediterranean Sea, Iberian Peninsula, Morocco, and Algeria; 2) Baja Peninsula; 3) Cyprus and Mediterranean Sea; 4) Florida; 5) Earth limb and Pacific Ocean; 6) North Carolina Outer Banks, Cape Hatteras, and Atlantic Ocean; 7) Houston with zoom out to Texas and Louisiana; 8) Mt. Vesuvius (Italy); 9) Earth limb and Atlantic Ocean; 10) Earth limb and terminator, and Pacific Ocean; 11) Saudia Arabia, Yemen, Oman, and Arabian Sea. CASI

STS-107 Mission Highlights Resource, Part 4 of 4

[2003]; In English; 28 min., 10 sec. playing time, in color, with sound

Report No(s): JSC-1952; No Copyright; Avail: CASI; V02, Videotape-VHS; B02, Videotape-Beta

This video, Part 4 of 4, shows the activities of the STS-107 crew during flight days 13 through 15 of the Columbia orbiter's final flight. The crew consists of Commander Rick Husband, Pilot William McCool, Payload Commander Michael Anderson, Mission Specialists David Brown, Kalpana Chawla, and Laurel Clark, and Payload Specialist Ilan Ramon. The highlight of flight day 13 is Kalpana Chawla conversing with Mission Control Center in Houston during troubleshooting of the Combustion Module in a recovery procedure to get the MIST fire suppression experiment back online. Chawla is shown replacing an atomizer head. At Mission Control Center a vase of flowers commemorating the astronauts who died on board Space Shuttle Challenger's final flight is shown and explained. The footage of flight day 14 consists of a tour of Columbia's flight deck, middeck, and Spacehab research module. Rick Husband narrates the tour, which features Kalpana Chawla, Laurel Clark, and himself. The astronauts demonstrate hygene, a dining tray, the orbiter's toilet, and a space iron, which is a rack for strapping down shirts. The Earth limb is shown with the Spacehab module in the foreground. Clark exercises on a bicycle for a respiration experiment, and demonstrates how a compact disk player gyrates in microgravity. On flight day 15, the combustion module is running again, and footage is shown of the Water Mist Fire-Suppression Experiment (Mist) in operation. Laurel Clark narrates a segment of the video in which Ilan Ramon exercises on a bicycle, Rick Husband, Kalpana Chawla, and Ramon demonstrate spinning and push-ups in the Spacehab module, and Clark demonstrates eating from a couple of food packets. The video ends with a shot of the Earth limb reflected on the radiator on

the inside of Columbia's open payload bay door with the Earth in the background.

TDRS-1 Going Strong at 20
April 03, 2003; In English; 10 mins., 19 sec. playing time, in color, with sound
Report No(s): G03-029; No Copyright; Avail: CASI; V01, Videotape-VHS; B01, Videotape-Beta

This video presents an overview of the first Tracking and Data Relay Satellite (TDRS-1) in the form of text, computer animations, footage, and an interview with its program manager. Launched by the Space Shuttle Challenger in 1983, TDRS-1 was the first of a network of satellites used for relaying data to and from scientific spacecraft. Most of this short video is silent, and consists of footage and animation of the deployment of TDRS-1, written and animated explanations of what TDRS satellites do, and samples of the astronomical and Earth science data they transmit. The program manager explains in the final segment of the video the improvement TDRS satellites brought to communication with manned space missions, including alleviation of blackout during reentry, and also the role TDRS-1 played in providing telemedicine for a breast cancer patient in Antarctica.

Hey! What's Space Station Freedom?

Vonehrenfried, Dutch; JAN 1, 1992; In English

Report No(s): NASA-TM-110531; NONP-NASA-VT-95-42907; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This video, 'Hey! What's Space Station Freedom?', has been produced as a classroom tool geared toward middle school children. There are three segments to this video. Segment One is a message to teachers presented by Dr. Jeannine Duane, New Jersey, 'Teacher in Space'. Segment Two is a brief Social Studies section and features a series of Presidential Announcements by President John F. Kennedy (May 1961), President Ronald Reagan (July 1982), and President George Bush (July 1989). These historical announcements are speeches concerning the present and future objectives of the USA' space programs. In the last segment, Charlie Walker, former Space Shuttle astronaut, teaches a group of middle school children, through models, computer animation, and actual footage, what Space Station Freedom is, who is involved in its construction, how it is to be built, what each of the modules on the station is for, and how long and in what sequence this construction will occur. There is a brief animation segment where, through the use of cartoons, the children fly up to Space Station Freedom as astronauts, perform several experiments and are given a tour of the station, and fly back to Earth. Space Station Freedom will take four years to build and will have three lab modules, one from ESA and another from Japan, and one habitation module for the astronauts to live in.

Delta II Mars Pathfinder

Dec. 04, 1998; In English; Videotape: 1 hour 15 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999036756; No Copyright; Avail: CASI; V04, Videotape-VHS

Final preparations for lift off of the DELTA II Mars Pathfinder Rocket are shown. Activities include loading the liquid oxygen, completing the construction of the Rover, and placing the Rover into the Lander. After the countdown, important visual events include the launch of the Delta Rocket, burnout and separation of the three Solid Rocket Boosters, and the main engine cutoff. The cutoff of the main engine marks the beginning of the second stage engine. After the completion of the second stage, the third stage engine ignites and then cuts

off. Once the third stage engine cuts off spacecraft separation occurs.

Report No(s): NONP-NASA-VT-1999036757; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The purpose of this mission is to study the climate history and the water distribution of Mars. Beautiful panoramic views of the shuttle on the launch pad, engine ignition, Rocket launch, and the separation and burnout of the Solid Rocket Boosters are shown. The footage also includes an animation of the mission. Detailed views of the path that the Orbiter traversed were shown. Once the Orbiter lands on the surface of Mars, it will dig a six to eight inch hole and collect samples from the planets' surface. The animation also included the prospective return of the Orbiter to Earth over the desert of Utah. The remote sensor on the Orbiter helps in finding the exact location of the Orbiter so that scientists may collect the sample and analyze it.

Galileo Press Conference from JPL
Jul. 27, 1995; In English; Videotape: 44 min. 20 sec. playing time, in color with sound
Report No(s): NONP-NASA-VT-1999206977; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The press conference concerns the Orbiter Deflection maneuver that had taken place earlier that day. The participants in the press conference, spoke of the success of the maneuver, which was performed perfectly. The Galileo project was a cooperative effort with the German Space Agency. Two members of the German Space Agency were introduced. There was a review of the trip to Jupiter, and the probe release. The deflection maneuver was important to getting the Probe on the correct path for the descent into the atmosphere of Jupiter. A brief video showed simulations of the probe release and the descent of the probe into the atmosphere. There was discussion about the failure of the high gain antenna to deploy, and the requirement to use the low gain antenna instead. A full scale model of the probe was shown.

Atlas Centaur/GOES-J News Conference, Part 2 of 2
May 18, 1995; In English; Videotape: 28 min. 30 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-1999206992; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Live footage includes a continuation of the discussions on Geostationary Satellites, the Automatic Surface Observation System (ASOS), and the Doppler Radar Network lead by Frederick Ostby, Director of the National Severe Storms Forecast Center. Live Coverage also shows the question and answer session between the panelists and the audience. This abstract describes the content of tape 2 of 2, 1 having a Report Number of NONP-NASA-VT-2000000038.

TRW Video News: Chandra X-ray Observatory
July 1999; In English; Videotape: 7 min. 47 sec. playing time, in color, without sound
Report No(s): NONP-NASA-VT-2000010635; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This NASA Kennedy Space Center sponsored video release presents live footage of the Chandra X-ray Observatory prior to STS-93 as well as several short animations recreating some of its activities in space. These animations include a Space Shuttle fly-by with Chandra, two perspectives of Chandra's deployment from the Shuttle, the Chandra deployment orbit sequence, the Initial Upper Stage (IUS) first stage burn,

and finally a 'beauty shot', which represents another animated view of Chandra in space.

Apollo 11 Launch
Jan. 28, 1999; In English; Videotape: 59 min., 40 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000008131; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

This NASA Kennedy Space Center video release presents the countdown and liftoff of Apollo 11, the first manned journey to the Moon which began at Pad A, Launch Complex 39, Kennedy Space Center, Florida at 9:32 a.m. EDT on July 16, 1969. The crew of Apollo 11 included Commander Neil A. Armstrong, Command Module pilot Michael Collins, and Lunar Module pilot Edwin E. Aldrin, Jr. Several different camera viewpoints of the spacecraft as well as over-head shots of the Kennedy launch control center are presented prior to liftoff. Other footage includes shots of President Lyndon B. Johnson and his wife among the Florida audience viewing liftoff. During the countdown several audio updates from Kennedy launch control are presented as to the status of pre-launch testing and system readiness. Captivating footage from liftoff to the spacecraft nearing the outer Earth atmosphere is shown as the video ends with Neil Armstrong's confirmation of engine skirt separation and launch escape tower separation from the spacecraft.

International Space Station: Expedition 2000
Jan. 01, 2000; In English; Videotape: 55 min. 17 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000043347; No Copyright; Avail: CASI; V03, Videotape-VHS

Live footage of the International Space Station (ISS) presents an inside look at the groundwork and assembly of the ISS. Footage includes both animation and live shots of a Space Shuttle liftoff. Phil West, Engineer; Dr. Catherine Clark, Chief Scientist ISS; and Joe Edwards, Astronaut, narrate the video. The first topic of discussion is People and Communications. Good communication is a key component in our ISS endeavor. Dr. Catherine Clark uses two soup cans attached by a string to demonstrate communication. Bill Nye the Science Guy talks briefly about science aboard the ISS. Charlie Spencer, Manager of Space Station Simulators, talks about communication aboard the ISS. The second topic of discussion is Engineering. Bonnie Dunbar, Astronaut at Johnson Space Flight Center, gives a tour of the Japanese Experiment Module (JEM). She takes us inside Node 2 and the U.S. Lab Destiny. She also shows where protein crystal growth experiments are performed. Audio terminal units are used for communication in the JEM. A demonstration of solar arrays and how they are tested is shown. Alan Bell, Project Manager MRMDF (Mobile Remote Manipulator Development Facility), describes the robot arm that is used on the ISS and how it maneuvers the Space Station. The third topic of discussion is Science and Technology. Dr. Catherine Clark, using a balloon attached to a weight, drops the apparatus to the ground to demonstrate Microgravity. The bursting of the balloon is observed. Sherri Dunnette, Imaging Technologist, describes the various cameras that are used in space. The types of still cameras used are: 1) 35 mm, 2) medium format cameras, 3) large format cameras, 4) video cameras, and 5) the DV camera. Kumar Krishen, Chief Technologist ISS, explains inframetrics, infrared vision cameras and how they perform. The Short Arm Centrifuge is shown by Dr. Millard Reske, Senior Life Scientist, to subject astronauts to forces greater than 1-g. Reske is interested in the physiological effects of the eyes and the muscular system after their exposure to forces greater than 1-g.

Delta 181 News Release

Feb. 04, 1988; In English; Videotape: 5 min. 30 sec. playing time, in color, no sound

Report No(s): NONP-NASA-VT-2000078600; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The Delta-181 mission was a military tracking exercise with released sub-satellites. It was also engaged in research and exploration of the upper atmosphere and the Earth Limb. This videotape consists of an animated film, which reviews the rocket stages, the launch and orbital insertion. It also shows the planned release of the sub-satellites in two groups. The plans for Earth limb observations are also shown.

Delta II/Geotail Pre-Launch Press Conference

Jul. 23, 1992; In English; Videotape: 62 min. 29 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078601; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This video presents a live coverage of a pre-launch press conference on the Delta II/Geotail Mission. George Diller, NASA Public Affairs, presents the panel. The panel consists of James Womack, NASA Launch Manager, Kennedy Space Center; Mario Acuna, Project Scientist, Goddard Space Flight Center; Atsuiro Nishida, Project Manager, ISAS (Institute of Space and Astronautical Science) Tokyo; Michael Calabrese, Program Manager, NASA Headquarters; Kenneth Sizemore, Project Manager, GSFC; Tono Uesugi, Project Manager, ISAS; John Beckham, Delta Launch Manager, GSFC; and Joel Tumbiolo, Launch Weather Officer, CCAFS (Cape Canaveral Air Force Station). Atsuiro Nishida presents the objectives of the Geotail Mission which are: 1) To determine the characteristics of the Geomagnetic Tail; 2) To understand the internal instability that leads to sudden energy releases; 3) To clarify the source of plasma in the tail; and 4) To study the structure of important interfaces such as the Magnetopause. Mario Acuna gives illustrations of the Magnetosphere. James Womack discusses the countdown and status of the mission. Tono Uesugi discusses spacecraft readiness for the July 24, 1992 launch, and Joel Tumbiolo gives the weather forecast for the launch. The press conference concludes with a question and answer period. See NONP-NASA-VT-200078605 for additional questions and footage.

Delta XTE Spacecraft Removed from Transfer Cannister at Hangar AO, CCAS

Jun. 01, 1995; In English; Videotape: 7 min. playing time, in color, no sound

Report No(s): NONP-NASA-VT-2000078617; KSC95-50625; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The X-ray Timing Explorer (XTE) is a satellite that observes the fast-moving, high-energy worlds of black holes, neutron stars, X-ray pulsars and bursts of X-rays that light up the sky and then disappear forever. It was launched on Dec. 30, 1995. This videotape shows the spacecraft being removed from the transfer cannister. After the spacecraft is set down, the foil covering is removed by workers in clean room clothing.

Atlas SOHO Booster and Centaur Erection

Sep. 29, 1995; In English; Videotape: 8 min. playing time, in color, no sound

Report No(s): KSC95-50997; NONP-NASA-VT-2000078650; WO X9095-258; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The launch vehicle for the Solar Heliospheric Observatory (SOHO) mission is a two stage Atlas-IIAS (Atlas/Centaur). The Atlas, consists of a solid rocket booster stage powered by four Thiokol Castor IVA solid rocket boosters (SRB) and a core vehicle stage (booster and sustainer) powered by Rocketdyne MA-5A liquid propellant engines (RP-1 fuel and liquid oxygen). The multiple firing Centaur is powered by two Pratt and Whitney (RL10A-4) liquid hydrogen and liquid oxygen engines with extendible nozzles. This video shows the erection of the Atlas booster and transportation (to 36-B launching pad) and erection of the Centaur.

The Geotail mission, part of the International Solar Terrestrial Physics (ISTP) program, measures global energy flow and transformation in the magnetotail to increase understanding of fundamental magnetospheric processes. The satellite was launched on July 24, 1992 onboard a Delta II rocket. This video shows with animation the solar wind, and its effect on the Earth. The narrator explains that the Geotail spacecraft was designed and built by the Institute of Space and Astronautical Science (ISAS), the Japanese Space Agency. The mission objectives are reviewed by one of the scientist in a live view. The video also shows an animation of the orbit, while the narrator explains the orbit and the reason for the small launch window.

ATLAS-SOHO: Satellite Arrival and Uncrating, Uncrating of the Propulsion Unit and Electric Module
Aug. 01, 1995; In English; Videotape: 3 min. 46 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000078597; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The SOHO satellite, part of the International Solar-Terrestrial Physics Program (ISTP), is a solar observatory designed to study the structure, chemical composition, and dynamics of the solar interior. It will also observe the structure (density, temperature and velocity fields), dynamics and composition of the outer solar atmosphere, and the solar wind and its relation to the solar atmosphere. The spacecraft was launched on December 2, 1995. This video shows the unloading of the satellite from the transport plane at the Kennedy Space Station and the lowering to an awaiting flatbed truck. The video also shows the uncrating of the satellite, the propulsion unit and the electric module in a clean room.

GEOS-I Satellite Applications Briefing

Apr. 12, 1994; In English; Videotape: 53 min. 41 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000081542; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Footage shows a panel discussion on the GEOS-I Satellite. The moderator George Diller, NASA Public Affairs, introduces the panel members. Panel members include Dr. Joe Friday, Director of the National Weather Service and Dr. Bob Sheets, from the National Hurricane Center. Discussions include infrared and microwave imagery, the GEOS-I satellite, and the gathering of weather and hurricane data.

Starfire I/ Consort III Launch

May 16, 1990; In English; Videotape: 28 min. 11 sec. playing time, in color. with sound

Report No(s): NONP-NASA-VT-2000081529; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The Consort 3 is a commercial suborbital rocket that carried 12 microgravity experiments. It was launched on a Starfire rocket on May 16, 1990, from the Naval Ordnance Missile Test Station facilities at the U.S. Army's White Sands Missile Range (WSMR), NM. The videotape opens with approximately 2 minutes of a man speaking into a microphone but there is no sound. This is followed by a brief summary of the payload, and the expected trajectory, a view of the launch vehicle, the countdown and the launch. The videotape then shows a film clip from the University of Alabama, with Dr. Francis Wessling, project manager for the Consort 3 project, speaking about the mission goals in the materials sciences experimentation. The video shows footage of the payload being assembled. The next section is a discussion by Dr. Roy Hammustedt, of Pennsylvania State University, who reviews the Penn State Bio Module,and the goal of learning about the effects of gravity on physiology. This is followed by George Maybee, from McDonald Douglas, who spoke about the payload integration process while the video shows some of the construction. The last section of the videotape shows a press conference at the launch site. Ana Villamil answers questions from the press about the flight.

AC-67/FLTSATCOM Launch with Isolated Cam Views/ Freeze of Lightning/ Press Conference

Mar. 26, 1987; In English; Videotape: 34 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000078604; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The FLTSATCOM system provides worldwide, high-priority UHF communications between naval aircraft, ships, submarines, and ground stations and between the Strategic Air Command and the national command authority network. This videotape shows the attempted launch of the 6th member of the satellite system on an Atlas Centaur rocket. Within a minute of launch a problem developed. The initial sign of the problem was the loss of telemetry data. The videotape shows three isolated views of the launch, and then a freeze shot of a lightning strike shortly after the launch. The tape then shows a press conference, with Mr. Wolmaster, Mr. Gibbs, and Air Force Colonel Alsbrooke. Mr. Gibbs summarizes the steps that would be taken to review the launch failure. The questions from the press mostly concern the weather conditions, and the possibility that the weather might have caused the mission failure.

On March 26, 1987, after the launch of an Atlas/Centaur rocket with a payload of a Navy Communications Satellite, a problem developed and the rocket was lost. This videotape is a press conference held to review the incident. Mr. John Gibb, the Atlas-Centaur Program Manager at Lewis Research Center, opens the press conference with a statement that reviews the situation, and what is known about the accident. He reviews the constraints to launch and explains that to the best of his knowledge there was no violation of these constraints. He further states that a review panel will investigate the circumstances and make recommendations. The press conference is then opened up to questions. Most of the questions concern the weather conditions and the existence of lightning in the area. The Air Force representative, Colonel John Albrook, is asked if the loss of the satellite would pose any problems. He answers that there were several satellites performing the role for which this satellite was slated, and that these were still healthy, and capable of continuing for a considerable length of time.

STS-109/Columbia/HST Pre-Launch Activities/Launch On Orbit-Landing-Crew Egress
March 12, 2002; In English; 1 hr, with color and sound; No Copyright; Avail: CASI; V03, Videotape-VHS; B03, Videotape-Beta

The STS-109 Space Shuttle Mission begins with introduction of the seven crew members: Commander Scott D. Altman, pilot Duane G. Carey, payload commander John M. Grunsfeld, mission specialists: Nancy J. Currie, James H. Newman, Richard M. Linnehan, and Michael J. Massimino. Spacewalking NASA astronauts revive the Hubble Space Telescope's (HST) sightless infrared eyes, outfitting the observatory with an experimental refrigerator designed to resuscitate a comatose camera. During this video presentation John Grunsfeld and Rick Linnehan bolt the new cryogenic cooler inside HST and hung a huge radiator outside the observatory and replaces the telescope power switching station. In the video we can see how the shuttle robot arm operator, Nancy Currie, releases the 13-ton HST. Also, the landing of the Space Shuttle Columbia is presented.

Solid surface

Dec 1, 1992; In English

Report No(s): LERC-92-168A; NASA-TM-109746; NONP-NASA-VT-94-9946; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video tape describes the development of the Solid Surface Combustion Experiment (SSCE) by researchers at NASA LeRC. The experiment studies fire spreading over a small solid fuel sample subjected to microgravity conditions in Earth orbit. Buoyant convection, which determines the heat transfer in fires on Earth, disappears in microgravity; hence, this experiment will help researchers understand how fires act on Earth.

The Isothermal Dendritic Growth Experiment (IDGE) flew on STS-62 to study the microscopic, tree-like structures (dendrites) that form within metals as they solidify from molten materials. The size, shape, and orientation of these dendrites affect the strength and usefulness of metals. Data from this experiment will be used to test and improve the mathematical models that support the industrial production of metals.

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4

Feb. 20, 1996; In English; Videotape: 40 min. playing time, in color, with sound

Report No(s): NASA-TP-3564/Videotape 2 of 4; NAS 1.60:3564/Videotape 2 of 4; W/O-472411-Tape-2 of 4; NONP-NASA-VT-97-1997005938; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The report presents the results of the flight experiment Tank Pressure Control Experiment/Thermal Phenomena (TPCE/TP) performed in the microgravity environment of the space shuttle. TPCE/TP, flown on the Space Transportation System STS-52, was a second flight of the Tank Pressure Control Experiment (TPCE). The experiment used Freon 113 at near saturation conditions. The test tank was filled with liquid to about 83 percent by volume. The experiment consisted of 21 tests. Each test generally started with a heating phase to increase the tank pressure and to develop temperature stratification in the fluid, followed by a fluid mixing phase for the tank pressure reduction and fluid temperature equilibration. The heating phase provided pool boiling data from large (relative to bubble sizes) heating surfaces (0.1046 m by 0.0742 m) at low heat fluxes (0.23 to 1.16 kW/m(exp 2)). The system pressure and the bulk liquid subcooling varied from 39 to 78 kPa and 1 to 3 deg C, respectively. The boiling process during the entire heating period, as well a jet-induced mixing process for the first 2 min. of the mixing period, was also recorded on video. Analyses of data from the two flight experiments (TPCE and TPCE/TP) and their comparison with the results obtained in drop tower experiments suggest that as Bond number approaches zero the flow pattern produced by an axial jet and the mixing time can be predicted by the Weber number. This is video tape 2 of 4.

Thermocapillary convection in evaporating sessile drops
JAN 1, 1986; In English
Report No(s): NASA-TM-109758; NONP-NASA-VT-94-9958; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The purpose of this video is to understand the effects of surface tension on fluid convection. The fluid system chosen is the liquid sessile droplet to show the importance in single crystal growth, the spray drying and cooling of metal, and the advance droplet radiators of the space stations radiators. A cross sectional representation of a hemispherical liquid droplet under ideal conditions is used to show internal fluid motion. A direct simulation of buoyancy-dominant convection and surface tension-dominant convection is graphically displayed. The clear differences between two mechanisms of fluid transport, thermocapillary convection, and bouncy dominant convection is illustrated.

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test
Holland, Scott D.; Nov 1, 1994; In English
Contract(s)/Grant(s): RTOP 763-23-35-08
Report No(s): NASA-TM-109984; NONP-NASA-SUPPL-VT-94-32020; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This supplement to NASA TM 109152 shows the Schlieren video (10 min. 52 sec., color, Beta and VHS) of the external flow field and a portion of the internal flow field of a two-dimensional scramjet inlet model in the NASA Langley 20-Inch Mach 6 Tunnel. The intent of the overall test program is to study (both experimentally and computationally) the dynamics of the inlet unstart; this (phase I) effort examines potential wind-tunnel blockage issues related to model sizing and the adequacy of the actuation systems in accomplishing the start and unstart. The model is equipped with both a moveable cowl and aft plug. Windows in the inlet sidewalls allow limited optical access to the internal shock structure. In the video, flow is from right to left, and the inlet is oriented inverted with respect to flight, i.e., with the cowl on top. The plug motion is obvious because the plug is visible in the aft window. The cowl motion, however, is not as obvious because the cowl is hidden from view by the inlet sidewall. The end of the cowl actuator arm, however, becomes visible above the inlet sidewalls between the windows when the cowl is up (see figure 1b of the primary document). The model is injected into the tunnel and observed though several actuation sequences with two plug configurations over a range of unit freestream Reynolds number at a nominal freestream Mach number of 6. The framing rate and shutter speed of the camera were too slow to fully capture the dynamics of the unstart but did prove sufficient to identify inlet start and unstart. This series of tests indicated that the model was appropriately sized for this facility and identified operability limits required first to allow the inlet to start and second to force the unstart.

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow
Buggele, Alvin E.; Seasholtz, Richard G.; Sep. 1997; 22 pp.; In English; 42nd International Society for Optical Engineering Conference, 27 Jul. - 1 Aug. 1997, San Diego, CA, USA; Original contains color illustrations
Contract(s)/Grant(s): RTOP 953-74-40
Report No(s): NASA-TM-107533; NAS 1.15:107533; E-10853; NONP-NASA-VT-1997067113; No Copyright; Avail: CASI; A03, Hardcopy; V01, Videotape-VHS

Filtered Rayleigh Scattering and shadowgraph flow visualization were used to characterize the penetration of helium or moist air injected transversely at several pressures into a Mach 3 flow in the NASA Lewis 3.81 inch by 10 inch continuous flow supersonic wind tunnel. This work is in support of the LOX (liquid oxygen) Augmented Nuclear Thermal Rocket program. The present study used an injection-seeded, fre-

quency doubled ND:YAG pulsed laser to illuminate a transverse section of the injectant plume. Rayleigh scattered light was passed through an iodine absorption cell to suppress stray laser light and was imaged onto a cooled CCD camera. The scattering was based on condensation of water vapor in the injectant flow. Results are presented for various configurations of sonic and supersonic injector designs mounted primarily in the floor of the tunnel. Injectors studied include a single 0.25 inch diameter hole, five 0. 1 12 inch diameter holes on 0. 177 inch spacing, and a 7 deg. half angle wedge. High speed shadowgraph flow visualization images were obtained with several video camera systems. Roof and floor static pressure data are presented several ways for the three configurations of injection designs with and without helium and/or air injection into Mach 3 flow. A 12 min. video supplement is also included.

PMMW Camera TRP, Phase 1
1997; 32 pp.; In English
Contract(s)/Grant(s): NCC1-196
Report No(s): NASA-CR-205700; NAS 1.26:205700; NONP-NASA-VT-1997057310; No Copyright; Avail: CASI; A03, Hardcopy; V01, Videotape-VHS

Passive millimeter wave (PMMW) sensors have the ability to see through fog, clouds, dust and sandstorms and thus have the potential to support all-weather operations, both military and commercial. Many of the applications, such as military transport or commercial aircraft landing, are technologically stressing in that they require imaging of a scene with a large field of view in real time and with high spatial resolution. The development of a low cost PMMW focal plane array camera is essential to obtain real-time video images to fulfill the above needs. The overall objective of this multi-year project (Phase 1) was to develop and demonstrate the capabilities of a W-band PMMW camera with a microwave/millimeter wave monolithic integrated circuit (MMIC) focal plane array (FPA) that can be manufactured at low cost for both military and commercial applications. This overall objective was met in July 1997 when the first video images from the camera were generated of an outdoor scene. In addition, our consortium partner McDonnell Douglas was to develop a real-time passive millimeter wave flight simulator to permit pilot evaluation of a PMMW-equipped aircraft in a landing scenario. A working version of this simulator was completed. This work was carried out under the DARPA-funded PMMW Camera Technology Reinvestment Project (TRP), also known as the PMMW Camera DARPA Joint Dual-Use Project. In this final report for the Phase 1 activities, a year by year description of what the specific objectives were, the approaches taken, and the progress made is presented, followed by a description of the validation and imaging test results obtained in 1997.

High temperature NASP engine seal development
JAN 1, 1992; In English
Report No(s): LERC-92-174; NASA-TM-109750; NONP-NASA-VT-94-9950; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video details research being conducted at the Lewis Research Center on high temperature engine seal design for the National Aerospace Plane. To maximize the speed, the jets on the NASP extract oxygen from the air rather than carry large liquid fuel tanks; this creates temperatures within the jet of over 5000 F. To prevent these potentially explosive gases from escaping, researchers are developing new technologies for use in the engine seals. Two examples explained are the ceramic wafer seal and the braided ceramic rope seal. Computer simulations and laboratory footage are used to illustrate the workings of these seals. Benefits for other aerospace and industrial applications, as well as for the space shuttle, are explored.

The story of research and technology at NASA Lewis Research Center's Structures Division is presented. The job

and designs of the Structures Division needed for flight propulsion is described including structural mechanics, structural dynamics, fatigue, and fracture. The video briefly explains why properties of metals used in structural mechanics need to be tested. Examples of tests and simulations used in structural dynamics (bodies in motion) are briefly described. Destructive and non-destructive fatigue/fracture analysis is also described. The arc sprayed monotape (a composite material) is explained, as are the programs in which monotape plays a roll. Finally, the National Aero-Space Plane (NASP or x-30) is introduced, including the material development and metal matrix as well as how NASP will reduce costs for NASA.

A collection of The Movies

Mar 28, 1991; In English

Report No(s): JPL-AVC-013-89; NASA-TM-109806; NONP-NASA-VT-94-12934; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This video contains computer-generated animation made from still data sets processed by computer to give the illusion of flying around the objects. 'Earth the Movie' uses cloud data from satellites and geographical data from maps. 'LA the Movie' was taken from Landsat data of the Los Angeles area. This was the first experimental demonstration of the technology. 'Mars the Movie' was taken from Viking orbiter data. 'Miranda' the Movie was made from a mosaic of 9 frames taken by Voyager of the Uranium moon, Miranda. The last movie is 'Monterey the Bay'.

Shuttle Earth Views, 1994, Part 4

Apr. 26, 1995; In English; Videotape: 59 min. 30 sec. playing time, in color, no sound

Report No(s): NASA-TM-111372; CL-1383-Pt-4; NONP-NASA-VT-96-1996031301; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

In this fourth part of a four part video compilation of Space Shuttles' Earth views various geographical areas are shown, including both land and water masses. The views covered the Middle East (Saudi Arabia, Sinai, Jordan , Egypt, Iran, Iraq, Kuwait, Bahrain, Qutar, and the United Arab Emirates), northeastern Africa (Yemen, Oman, Ethiopia, Somalia, and Djibouti), Russia, Siberia, India, Sri Lanka, Tibet, Bhutan, western China, and Mongolia. Various lakes, seas, rivers, and islands are shown, along with several pieces of film footage of sunsets, moon sets, clouds, and tropical storms. Each film clip has a heading that names the shuttle and the geographical location of the footage.

Dante's volcano
Sep 1, 1994; In English
Report No(s): ASR-269; NASA-TM-109955; NONP-NASA-VT-94-25775; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video contains two segments: one a 0:01:50 spot and the other a 0:08:21 feature. Dante 2, an eight-legged walking machine, is shown during field trials as it explores the inner depths of an active volcano at Mount Spurr, Alaska. A NASA sponsored team at Carnegie Mellon University built Dante to withstand earth's harshest conditions, to deliver a science payload to the interior of a volcano, and to report on its journey to the floor of a volcano. Remotely controlled from 80-miles away, the robot explored the inner depths of the volcano and information from onboard video cameras and sensors was relayed via satellite to scientists in Anchorage. There, using a computer generated image, controllers tracked the robot's movement. Ultimately the robot team hopes to apply the technology to future planetary missions.

The atmosphere below
JAN 1, 1992; In English
Report No(s): NASA-TM-110538; NONP-NASA-VT-95-43941; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

In this educational 'Liftoff to Learning' video series,

astronauts from the STS-45 Space Shuttle Mission (Kathy Sullivan, Byron Lichtenberg, Brian Duffy, Mike Foale, David Leestma, Charlie Bolden, and Dirk Frimont) explain and discuss the Earths atmosphere, its needs, the changes occurring within it, the importance of ozone, and some of the reasons behind the ozone depletion in the Earths atmosphere. The questions of: (1) what is ozone; (2) what has happened to the ozone layer in the atmosphere; and (3) what exactly does ozone do in the atmosphere, are answered. Different chemicals and their reactions with ozone are discussed. Computer animation and graphics show how these chemical reactions affect the atmosphere and how the ozone hole looks and develops at the south pole during its winter season appearance.

Live from Antarctica: The coldest, windiest place on Earth
JAN 1, 1994; In English
Report No(s): NASA-CR-197737; NONP-NASA-VT-95-42904; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

In this first part of a four part 'Passport to Knowledge Special', hosted by Camille Jennings from Maryland Public Television, children from Maryland and Texas schools had the opportunity to directly interact with and ask questions of scientists and researchers in Antarctica live. The physical characteristics of Antarctica are featured, along with their effects on the human and microbiological organisms living in the region. The reasons behind the clothing worn in the Antarctic and the importance of the meteorological station are featured. Interviews with Professor Ian Dolziel (U of Texas) and Lt. commander John Joseph, NSFA (the head of the Navy Meteorology Center) occur with the school children, along with actual video footage of the surrounding geological features and geography. The 'Weatherops' is located at McMurdo Station, Antarctica.

Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230
Costen, Robert C.; Stock, Larry V.; Sep 15, 1992; In English
Contract(s)/Grant(s): RTOP 506-41-41-01
Report No(s): NASA-TP-3230-VIDEO-SUPPL; NONP-

NASA-VT-92-125097; L0592-9-7; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

In this video (8 min., color, sound, VHS), animation depicts the inertial oscillation of a new mathematical model ('vertical rotating draft') for spinning up a single supercell storm. The oscillation consists of a long quiescent phase when the draft is large in diameter and rotates anticyclonically and a short intense phase when the draft is small and cyclonic. During the intense phase, the rotating draft resembles a supercell. The physical basis for the oscillation is depicted by tracking air parcels in the draft as they move along inertial circles (projected on a horizontal plane), where the horizontal pressure gradient is zero and the Coriolis force balances the centrifugal force. A side view of the oscillation shows that contraction and expansion are linked, respectively, to buoyantly driven compressible downdraft and updraft. An aerial view tracks the draft as it moves above the surface of the Earth and turns to the right during the intense phase. Radar echoes from a supercell storm are superimposed for comparison. The data appear to support only the intense phase. A critical experiment would measure the predominantly downward flow that theoretically occurs before the right turn in a supercell track and causes contraction and spin-up.

This document and videotape represent the proceedings of the first Dinofest conference, which was unprecedented in bringing together exhibits of dinosaurs and other fossils and attracting many of the world's leading paleontologists and science educators, students and the public. This first Dinofest consisted of scores of exhibits that included live and fossil plants, invertebrates and vertebrates. Lasting three weeks, the event concluded with a three-day symposium, providing dinosaur experts from around the country a forum to discuss their research and ideas with the public and other scientists. The document presents the talks of many of the scientists. The videotape is from an interactive television broadcast relayed by a NASA satellite that enabled children at remote locations to ask questions of a panel of dinosaur experts, literally reaching an audience around the world.

Robotic Assisted Microsurgery - RAMS FY'97
Oct. 15, 1997; In English; Videotape: 5 min., 13 sec. playing time, in color, with sound
Report No(s): AVC-1998-020; NONP-NASA-VT-1999202515; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

JPL and Microdexterity Systems collaborated to develop new surgical capabilities. They developed a Robot Assisted Microsurgery (RAM) tool for surgeons to use for operating on the eye, ear, brain, and blood vessels with unprecedented dexterity. A surgeon can hold the surgical instrument with motions of 6 degrees of freedom with an accuracy of 25 microns in a 70 cu cm workspace. In 1996 a demonstration was performed to remove a microscopic particle from a simulated eyeball. In 1997, tests were performed at UCLA to compare telerobotics with mechanical operations. In 5 out of 7 tests, the RAM tool performed with a significant improvement of preciseness over mechanical operation. New design features include: (1) amplified forced feedback; (2) simultaneous slave robot instrumentation; (3) index control switch on master handle; and (4) tool control switches. Upgrades include: (1) increase in computational power; and (2) installation of hard disk memory storage device for independent operation and independent operation of forceps. In 1997 a final demonstration was performed using 2 telerobotics simultaneously in a microsurgery suture procedure to close a slit in a thin sheet of latex rubber which extended the capabilities of microsurgery procedures. After completing trials and demonstrations for the FDA the potential benefits for thousands of operations will be exposed.

In this educational video from the 'Liftoff to Learning' series, astronauts from the STS-56 Mission (Ken Cockell, Mike Foale, Ellen Ochoa, Steve Oswald, and Ken Cameron) explain and show through demonstrations how microgravity affects the way astronauts live onboard the Space Shuttle, and how these same daily habits or processes differ on Earth. A tour of the Space Shuttle is given, including the sleeping compartments, the kitchen area, the storage compartments, and the Waste Collection System (or WCS, as they call it). Daily habits (brushing teeth, shampooing hair and bathing, eating,...) are explained and actively illustrated, along with reasons of how these applications differ from their employment on Earth

Moonwalking Series, Episode 2: Adapting to a Space Environment
[2001]; In English; Videotape: 29 min. 13 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001095020; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This episode (second in a four-part series) shows the procedures Apollo operators used in order to make sure the astronauts would be able to survive in outer space, namely testing man's limitations and preferences (atmospheric pressure, temperature range, breathing gas, acceleration protection) and adapting the Columbia Module to account for these limitations. This show explains the function of the different stages of the moon rocket, i.e., how the stages separate and what becomes of them. We pick up the moonwalk story by looking back at some of the old classic space films that were a Hollywood perspective on future space travel.

Dr. Michael McGreevey (NASA's Ames Research Center) explains what virtual reality is and how NASA uses this concept. Computer animation of different planets using virtual reality is shown. One Ames research tool, the Virtual Wind Tunnel allows air flow to be studied inside the tunnel from any conceivable location. Dr. Carol Stoker (NASA's Ames Research Center) comments on Telepresence, one form of virtual reality.

Images of Earth and Space: The Role of Visualization in NASA Science
Mar. 06, 1996; In English; Videotape: 17 min. 14 sec. playing time, in color, with sound
Report No(s): NASA-TM-111618; BRF-1395J; NONP-NASA-VT-96-1996060600; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Fly through the ocean at breakneck speed. Tour the moon. Even swim safely in the boiling sun. You can do these things and more in a 17 minute virtual journey through Earth and space. The trek is by way of colorful scientific visualizations developed by the NASA/Goddard Space Flight Center's Scientific Visualization Studio and the NASA HPCC Earth and Space Science Project investigators. Various styles of electronic music and lay-level narration provide the accompaniment.

The story of pi
Apostol, Tom M., editor; JAN 1, 1989; In English
Report No(s): NASA-CR-199499; NONP-NASA-VT-95-68010; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

The early history and the uses of the mathematical notation - pi - are presented through both film footage and computer animation in this 'Project Mathematics' series video. Pi comes from the first letter in the Greek word for perimeter. Archimedes, and early Greek mathematician, formulated the equations for the computation of a circle's area using pi and was the first person to seriously approximate pi numerically, although only to a few decimal places. By 1985, pi had been approximated to over one billion decimal places and was found to have no repeating pattern. One use of pi is the application of its approximation calculation as an analytical tool for determining the accuracy of supercomputers and software designs.

Report No(s): NASA-CR-199455; NONP-NASA-VT-95-67470; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

In this 'Project Mathematics' series video, the addition formulas of sines and cosines are explained and their real life applications are demonstrated. Both film footage and computer animation is used. Several mathematical concepts are discussed and include: Ptolemy's theorem concerned with quadrilaterals; the difference between a central angle and an inscribed angle; sines and chord lengths; special angles; subtraction formulas; and a application to simple harmonic motion. A brief history of the city Alexandria, its mathematicians, and their contribution to the field of mathematics is shown.

This 'Project Mathematics' series video from CalTech presents the tunnel of Samos, a famous underground aquaduct tunnel located near the capital of Pithagorion (named after the famed Greek mathematician, Pythagorus, who lived there), on one of the Greek islands. This tunnel was constructed around 600 BC by King Samos and was built under a nearby mountain. Through film footage and computer animation, the mathematical principles and concepts of why and how this

aquaduct tunnel was built are explained.

Field Integrated Design and Operations (FIDO) rover is a prototype of the Mars Sample Return rovers that will carry the integrated Athena Science Payload to Mars in 2003 and 2005. The purpose of FIDO is to simulate, using Mars analog settings, the complex surface operations that will be necessary to find, characterize, obtain, cache, and return samples to the ascent vehicles on the landers. This videotape shows tests of the FIDO in the Mojave Desert. These tests include drilling through rock and movement of the rover. Also included in this tape are interviews with Dr Raymond Arvidson, the test director for FIDO, and Dr. Eric Baumgartner, Robotics Engineer at the Jet Propulsion Laboratory.

This is an edition of 'NASA Report to Education' covering NASA's Educational Workshop, Lewis Research Center's T-34 and the Space Exploration Initiative. The first segment shows NASA Education Workshop program (NEWEST - NASA Educational Workshops for Elementary School Teachers). Highlights of the 14 days of intense training, lectures, fieldtrips and simple projects that the educators went through to teach the program are included. Participants are shown working on various projects such as the electromagnetic spectrum, living in Space Station Freedom, experience in T-34, tour of tower at the Federal Aviation Administrative Facilities, conducting an egg survival system and an interactive video conference with astronaut Stori Musgrave. Participants share impressions of the workshop. The second segment tells how Lewis Research Center's T-34 aircraft is used to promote aerospace education in several Cleveland schools and excite students.

The development, history, and opportunities for employment available at the Johnson Space Center (JSC) in Houston, Texas are presented in this video, with special emphasis placed on minorities in the aeronautical engineering fields and at JSC. There are several interviews with black, Hispanic and female engineering and aeronautics professionals and the various projects they work on.

Richard T. Barrett, Senior Aerospace Engineer of NASA Lewis Research Center presents a comprehensive course on fastener design. A recognized expert in the field of fastener technology Mr. Barrett combines lecture, charts, illustrations with real-world experiences. Topics covered include: materials, plantings and coatings, locking methods threads, joint stiffness, rivets, inserts, nut plates, thread lubricants, design criteria, etc. A workbook accompanies the videotape.

STEP (STandard for the Exchange of Product Model Data) is an innovative software tool that allows the exchange of data between different programming systems to occur and helps speed up the designing in various process industries. This exchange occurs easily between those companies that have STEP, and many industries and government agencies are requiring that their vendors utilize STEP in their computer aided design projects, such as in the areas of mechanical, aeronautical, and electrical engineering. STEP allows the process of concurrent engineering to occur and increases the quality of the design product. One example of the STEP program is the Boeing 777, the first paperless airplane.

On March 26, 1987, after the launch of an Atlas/Centaur rocket with a payload of a Navy Communications Satellite, a problem developed and the rocket was lost. John Busse chaired the Accident Investigation Board that was convened to investigate the incident. This videotape is a press conference with Mr Busse, who reviews the findings of the investigation concerning the loss of the Atlas/Centaur-67 launch vehicle. The loss is primarily attributed to a hardover engine yaw command that was caused by an erroneous signal from the digital computer unit. The generation of the erroneous signal is blamed on unfavorable weather conditions which created a lightning hazard. Mr. Busse, also, reviews the investigation's recommendations for avoiding similar occurrences. The press then asks questions about the findings and recommendations.

The future of bibliographic standards in a networked information environment
Apr. 16, 1997; In English; FROM CENDI Workshop, 16 Apr. 1997, Bethesda, MD, USA; Videotape: 5 hrs. 51 min. playing time, in color, with sound
Report No(s): NASA/TM-97-113452; NONP-NASA-VT-1998000466; No Copyright; Avail: CASI; V06, Videotape-VHS; B06, Videotape-Beta; V06, Videotape-VHS

The main mission of the CENDI Cataloging Working Group is to provide guidelines for cataloging practices that support the sharing of database records among the CENDI agencies, and that incorporate principles based on cost effectiveness and efficiency. Recent efforts include the extension of COSATI Guidelines for the Cataloging of Technical Reports to include non-print materials, and the mapping of each agency's export file structure to USMARC. Of primary importance is the impact of electronic documents and the distributed nature of the networked information environment. Topics discussed during the workshop include the following: Trade-offs in Cataloging and Indexing Internet Information; The Impact on Current and Future Standards; A Look at WWW Metadata Initiatives; Standards for Electronic Journals; The Present and Future Search Engines; The Roles for Text Analysis Software; Advanced Search Engine Meets Metathesaurus; Locator Schemes for Internet Resources; Identifying and Cataloging Web Document Types; In Search of a New Bibliographic Record. The videos in this set include viewgraphs of charts and related materials of the workshop.

As speaker of this lecture series Michael Sander, Director of Technology and Application at the Jet Propulsion Laboratory (JPL), addresses three questions that scientists and engineers at JPL and NASA face daily. These questions are: How did the universe evolve, how did life start, and are we alone? The video focuses on the technological developments, improvements, and applications in society. Slides include several still pictures (infrared, x-ray, radio, and visible) of the universe, pictures of Venus through the use of radar instruments, and the visible and infrared pictures of the Orion nebula. Also included are the first images of Mars taken by the Mariner 4 spacecraft, color images from the Viking Lander spacecraft, and high resolution maps taken by the Mars Global Surveyor. Radar images of Los Angeles (Pasadena), San Francisco and San Juan are also shown. Some of the technological developments include the active pixel sensor camera, infrared cameras, CCD cameras, QWIP (Quantum Well Infrared Photodetector) cameras, a 3 inch diameter chip to analyze the amino acid and chemical compounds of the Martian soil, and sensors with the ability to crawl. The lecture also includes the planning of future missions.

In this education video series, 'Liftoff to Learning', astronauts (Bruce Melnick, Thomas Akers, William Shepherd, Robert Cabana, and Richard Richards) describe the historical beginnings of space exploration from the time of Robert H. Goddard (considered the Father of Rocketry), who, in 1929, invented the first propellant rocket, the prototype of modern liquid propellant rockets, up to the modern Space Shuttles. The questions - where is space, what is space, and how do astronauts get to, stay in, and come back from space are answered through historical footage, computer graphics, and animation. The space environment effects, temperature effects, and gravitational effects on the launching, orbiting, and descent of the Shuttles are discussed. Included is historical still photos and film footage of past space programs and space vehicles.

Best of Hubble Space Telescope
Feb. 18, 1997; In English; Videotape: 90 min. playing time, in color, with sound
Report No(s): NASA/TM-97-205921; NONP-NASA-VT-1997077165; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This video presents a chronological account of the Hubble Space Telescope. Using animation, movies, and stills it documents the design, development, launch, and repair mission to correct its optics. The second part of this video concentrates on the successes of Hubble. Included are the study of Galaxy Clusters, Black Holes, Jupiter animation, and Nebulas.

Ulysses News Conference
Oct. 26, 1995; In English; Videotape: 48 min. 10 sec playing time, in color, with sound
Report No(s): NONP-NASA-VT-1999206989; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The focus of this lecture is to discuss the purpose of the Ulysses mission. The mission objective is to study magnetic fields, cosmic rays and the solar winds from both the equator and the (North and South) poles of the Sun. The moderator of this lecture is Dr. Steve Maran, NASA/Goddard Space Flight Center, and panel members include Dr. Richard Marsden, ESA (European Space Agency) Project Scientist, Dr. Edward J. Smith, JPL/NASA Project Scientist, Dr. Antoinette Galvin, University of Maryland College Park, Dr. Randy Jokipii, University of Arizona, and Dr. John Phillips, Los Alamos National Laboratory. Each panel member contributes to the informative nature of this live video coverage. Topics discussed are the direction of the magnetic fields, solar winds, and cosmic rays. Visual aids of this lecture consist of various slides and computerized simulations.

HST Briefing: HST Science Overview

Jan. 13, 1994; In English; Videotape: 15 min. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999206993; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

Hubble Space Telescope upgrades are discussed during this overview. Among those discussed are the Space Telescope Imaging Spectograph, the New Infrared Camera, upgrading of instruments with 90's technology, new CCD detectors, corrective optics, reconfiguration of mirrors, reduction in overall exposure time. A question and answer period with Johnson Spaceflight Center, Goddard Spaceflight Center and the press focuses primarily on these upgrades to the Hubble Space Telescope.

This Kennedy Space Center video release presents the third part of a press conference held at Goddard Space Flight Center on Jan. 13, 1994. The session is moderated by Randee Exler (News Chief, GSFC) and includes presentations by Ken Ledbetter (HST Program Manager, NASA Headquarters), Frank Cepollina (HST Project Manager for Flight Systems and Servicing, GSFC) and Joe Rothenberg (Director, HST Flight Projects, GSFC) that discuss pre-flight testing and training, on-orbit servicing, highlights, and the status of the Hubble Space Telescope (HST). A question and answer period follows the presentations, after which three short highlight videos are presented that include actual footage of on-orbit servicing, galactic images taken by the HST, and pre-flight preparation and construction.

Hubble Space Telescope Briefing: HST Science Overview

Jan. 13, 1994; In English; Videotape: 1 hr. 2 min. 41 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-1999206991; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This NASA Kennedy Space Center video release presents a broad overview of the science that is now possible as a result of the servicing of the Hubble Space Telescope (HST). Dr. Ed Weiler (HST Program Scientist, NASA Headquarters), Dr. Dave Leckrone (HST, Senior Project Scientist, Goddard Space Flight Center (GSFC)), Dr. John Trauger (Wide Field Planetary Camera 2 (WFPC2) Principal Investigator, Jet Propulsion Lab. (JPL)), Dr. Chris Burrows (WFPC2 Co-Investigator, Space Telescope Science Inst.(STSci)-European Space Agency (ESA), Jim Crocker ((Corrective Optics Space Telescope Axial Replacement) COSTAR Team Leader, STSci), Dr. Holland Ford (COSTAR Project Scientist, Johns Hopkins Univ., STSci), and Dr. Duccio Machetto (European Space Agency (ESA)) give brief presentations, which feature images of stars and galaxies taken from the ground, from WFPC1 (prior to the servicing mission), and from WFPC2 (after the servicing mission). The main theme of the discussions center around the spherical aberration that was found in the images prior to servicing and the corrected images seen without the aberration following servicing. A question and answer period rounds out the press conference, with questions posed from scientific journalists at GSFC and other NASA centers.

Searching for Planets Around other Stars

Jan. 28, 1998; In English; Videotape: 1 hr. 19 min. playing time, in color, with sound

Report No(s): AVC-1998-067; NONP-NASA-VT-1999206897; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

In this colloquim presentation, Professor of Astronomy, Geoffrey Marcy discusses the discovery of planets orbiting other stars. Using the Doppler shift caused by stellar wobble that is caused by nearby planetary mass, astronomers have been able to infer the existence of Jupiter-sized planets around other stars. Using a special spectrometer at Lick Observatory, the wobble of several stars have been traced over the years required to generate an accurate pattern required to infer the stellar wobble. Professor Marcy, discusses the findings of planets around 47 Ursae Majoris, 16 Cygni B, 51 Pegasus, and 56 Rho 1 Cne. In the case of 56 Rho 1 Cne the planet appears to be close to the star, within 1.5 astronomical units. The observations from the smaller Lick Observatory will be augmented by new observations from the larger telescope at the Kek observatory. This move will allow observations of smaller planets, as opposed to the massive planets thus far discovered. The astronomers also hope to observe smaller stars with the Kek data. Future spaceborne observations will allow the discovery of even smaller planets. A spaceborne interferometer is in the planning stages, and an even larger observatory, called the Terrestrial Planet Finder, is hoped for. Professor Marcy shows artists' renderings of two of the planets thus far discovered. He also briefly discusses planetary formation and

shows slides of both observations from the Orion Nebula and models of stellar system formation.

This release marks the beginning of a new outlet for the Space Telescope Science Institute, the 'Hubble Minute'. Hubble Minute is an edited vignette suitable for use in newscasts, magazine shows, and as an interstitial program. The Minute explains how scientists are determining when M82 and M81 collided, and how dating the crash may result in a better understanding of how our own galaxy formed.

Farthest Supernova Bolsters Proof for a Mysterious Form of Energy Pervading the Universe
[2001]; In English; Videotape: 16 min. 42 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001047824; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Computerized animations show the following: (1) the acceleration and deceleration of the universe; (2) an image subtraction of the 1995 and 1997 images of the Hubble Deep Field to reveal a supernova in the 1997 image; (3) a pie-chart of the mass composition of the universe; (4) the universe's expansion after the Big Bang; (5) a supernova detonating; and (6) the lightbulb test (to determine distance by comparing light intensity). Zoom shots show the Hubble Deep Field (from ground-based observations to the Hubble Space Telescope (HST) image) and the Hubble Deep Field with a supernova (from an artist's conception animation to a ground-based view). Dr. Ron Gilliland explains that he looked for a supernova in the Hubble Deep Field and how supernova are useful as standard candles. Dr. Adam Riess describes how astronomers used supernovae to discover that the universe is expanding and why it might be expanding.

Microlensing: Globular Cluster M22 Video File
[2001]; In English; Videotape: 6 min. 55 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001092796; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

A computerized animation begins outside a globular cluster similar to M22, with the center of the Milky Way in the distance. The camera flies through the center of the cluster and rests with a dark object in the distance. This object, a suspected brown star, passes in front of a star in the galactic bulge, bending its light gravitationally. This bending, or lensing, causes a momentary brightening of the background star. Another sequence begins with a ground-based view of the center of our galaxy in the upper right. We zoom in to reveal a ground-based view of the region surrounding the cluster and continue zooming to reveal the Hubble Space Telescope view of M22. In an interview with Kailash Sahu, Astronomer, he describes the Hubble results, explains why the objects in M22 can't be planets, and explains Hubble's role in the observations of M22. The last image was taken with Hubble's Wide Field and Planetary Camera 2 and pierces the heart of a globular cluster with its needle-sharp vision and uncovers tantalizing clues to what could potentially be a strange and unexpected population of wandering, planet-sized objects.

Crab Pulsar
Oct. 02, 2002; In English; 1 hr., 48 min. playing time, in color, no sound
Report No(s): NONP-NASA-VT-2002135371; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

Two of NASA's greatest observatories, the Chandra X-Ray Observatory and the Hubble Space Telescope have produced this new action movie of the Crab Pulsar. The Crab

Pulsar was first observed by Chinese astronomers in 1050 A.D. and has since become one of the most studied objects in the sky. By combining the power of both Chandra and Hubble, the movie, made from multiple observations from several months, reveals features never seen in still images. By understanding the Crab Pulsar, astronomers hope to unlock the secrets of how similar objects across the universe are powered.

NASA's Hubble Space Telescope looks deep within the violent center where the two Antennae Galaxies were merging.

The Hubble's high resolution and sensitivity reveals the birth of young star clusters formed in the collision. New Hubble images of young star clusters help investigators put the evolutionary sequence into the right order. The Hubble Space Telescope images are: (1) zoom into the antennae galaxies; (2) galaxy merger evolution sequence; (3) the formation of the antennae pair; and (4) artist's conception of the collision of Milky-Way Galaxy with the Andromeda.

Comet Shoemaker-Levy Impact: Briefing, Pt. 2
May 18, 1994; In English; Videotape: 36 min., 51 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000001072; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

A panel discussion held on May 18, 1994, about the impact of the P/Shoemaker-Levy 9 (SL9) comet with Jupiter and its observable effects on Jupiter's atmosphere, rings, satellites, and magnetosphere, is presented. Before the panel discussion animations show the first nuclei impact, collision with Jupiter's night side (5 of the 22 known fragments of P/Shoemaker-Levy 9; N, P2, P1, Q2, and Q1), and simulated views of the Shoemaker-Levy 9 comet impact with Jupiter (from Earth and Galileo spacecraft) were presented. The panelists are: Dr. Eugene Shoemaker (from Lowell Observatory and US Geological Survey), the moderator and Shoemaker-Levy co-discoverer; Dr. Hal Weaver (from Space Telescope Science Institute); Dr. Lucy McFadden (from University of California-San Diego and the University of Maryland); Dr Melissa McGrath (from Space Telescope Science Institute); and Dr. Heidi Hammel (from Massachusetts Institute of Technology). Topics discussed include: interactions of cometary material with Jupiter's atmosphere, dynamical parameters of Jupiter's troposphere and stratosphere, and Hubble Space Telescope (HST) Observations of the SL9 Impacts on Jupiter's Atmosphere.The panel answered some of the audience's questions at the end of the discussion. This video, Part 2 (of 2), is a continuation of Part 1. It presents the second part of the question and answer session and a replay of the animations.

Black Holes Shed Light on Galaxy Formation
[2000]; In English; Videotape: 13 min. 10 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001026551; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This videotape is comprised of several segments of animations on black holes and galaxy formation, and several segments of an interview with Dr. John Kormendy. The animation segments are: (1) a super massive black hole, (2) Centarus A active black hole found in a collision, (3) galaxy NGC-4261 (active black hole and jet model), (4) galaxy M-32 (orbits of stars are effected by the gravity of the black hole), (5) galaxy M-37 (motion of stars increases as mass of black hole increases), (6) Birth of active galactic nuclei, (7) the collision of two galaxy leads to merger of the black holes, (8) Centarus A and simulation of the collision of 2 galaxies. There are also several segments of an interview with John Kormendy. In these segments he discusses the two most important aspects of his recent black hole work: (1) the correlations between galaxies speed and the mass of the black holes, and (2) the existence of black holes and galactic formation. He also discusses the importance of the Hubble Space Telescope and the Space Telescope Imaging Spectrograph to the study of black holes. He also shows the methodology of processing images from the spectrograph in his office.

Quasar Host Galaxies/Neptune Rotation/Galaxy Building Blocks/Hubble Deep Field/Saturn Storm
[2001]; In English; Videotape: 13 min. 57 sec. playing time, in color, no sound
Report No(s): NONP-NASA-VT-2001026556; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

Computerized animations simulate a quasar erupting in the core of a normal spiral galaxy, the collision of two interacting galaxies, and the evolution of the universe. Hubble Space Telescope (HST) images show six quasars' host galaxies (including spirals, ellipticals, and colliding galaxies) and six clumps of galaxies approximately 11 billion light years away. A false color time lapse movie of Neptune displays the planet's 16-hour rotation, and the evolution of a storm on Saturn is seen though a video of the planet's rotation. A zoom sequence starts with a ground-based image of the constellation Ursa major and ends with the Hubble Deep Field through progressively narrower and deeper views.

Spinning Stardust into Planets
[2001]; In English; Videotape: 6 min. 19 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001026554; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

A computerized animation simulates the formation of a stellar disk and planets. Ten images from the Hubble Space Telescope (HST) show young stellar disks (taken with the Near-Infrared Camera Multi-Object Spectrometer (NICMOS)) and stellar disks around young stars (taken with the Wide-Field Planetary Camera 2 (WFPC2)). Dr. Deborah Padgett describes what astronomers see in the images of young stellar disks and Dr. Karl Stapelfeldt explains HST's role in helping astronomers to examine young stars in order to understand how solar systems like our own may form.

Galaxy Group Stephan's Quintet Video File HubbleMinute: Battle Royale in Stephan's Quintet
Jul. 19, 2001; In English; Videotape: 12 min. 40 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2001107899; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

The Hubble Space Telescope's closeup view of Stephan's Quintet, a group of five galaxies, reveals a string of brighter star clusters that separate like a diamond necklace. Astronomers studying the compact galaxy group Stephan's Quintet have seen creative destruction in the many collisions taking place among its galaxies. This HubbleMinute discusses what astronomers are learning and hope to learn from exploring the quintet.

The following are presented: computer animation of trajectories for both Voyagers 1 and 2; view of Jupiter during one orbit of Ganymede; computer animation of Voyager 2's encounter with Jupiter and its satellites; time lapse of the planet's rotation and its satellites; stroboscopic sequence of selected frames; cloud motion; Jupiter's Great Red Spot (4/25 - 5/24, 1979) through a violet filter; and the Great Red Spot through a blue filter by Voyager 1. The dynamics of Jupiter's clouds are shown - the whole planet is shown first, then two closer looks are repeated several times. Also included are pans of stills of Jupiter's satellites and a computer simulation tour of Saturn system from POV just behind Voyager, made of 116 images of Saturn through a green filter and of 516 images taken by Voyager 1 (9/12 - 9/14, 1980). Frames are enhanced to show the motion of features in Saturn's rings. Pans of stills of Saturn's satellites are shown. There is computer animation of the planet's system, rings, and Sigma Sagittari. Images on January 14, 1986 are through an orange filter. Uranus's satellites are shown as is computer animation of an August 1989 encounter.

Neptune encounter highlights
Nov 28, 1989; In English
Report No(s): JPL-AVC-151-89; NASA-TM-109421; NONP-NASA-VT-93-190218; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Voyager encounter data are presented in computer animation (CA) and real (R) animation. The highlights include a view of 2 full rotations of Neptune. It shows spacecraft trajectory 'diving' over Neptune and intercepting Triton's orbit, depicting radiation and occulation zones. Also shown are a renegade orbit of Triton and Voyager's encounter with Neptune's Magnetopause. A model of the spacecraft's complex maneuvers during close encounters of Neptune and Triton is presented. A view from Earth of Neptune's occulation experiment is is shown as well as a recreation of Voyager's final pass. There is detail of Voyager's Image Compensation technique which produces Voyager images. Eighteen images were produced on June 22 - 23, 1989, from 57 million miles away. A 68 day sequence which provides a stroboscopic view - colorization approximates what is seen by the human eye. Real time images recorded live from Voyager on 8/24/89 are presented. Photoclinometry produced the topography of Triton. Three images are used to create a sequence of Neptune's rings. The globe of Neptune and 2 views of the south pole are shown as well as Neptune rotating. The rotation of a scooter is frozen in images showing differential motion. There is a view of rotation of the Great Dark Spot about its own axis. Photoclinometry provides a 3-dimensional perspective using a color mosaic of Triton images. The globe is used to indicate the orientation of Neptune's crescent. The east and west plumes on Triton are shown.

A combination of sophisticated computer animation and shuttle footage describe the missions of Ulysses, Galileo, and Magellan satellites to the solar system. Ulysses, launched in October 1990 by the European Space Agency, will study the sun. Galileo, launched in October 1989, will probe the Jovian system by releasing a probe that will descend into Jupiter's atmosphere and by using 12 instruments which will study Jupiter's 16 moons, its atmosphere, and its radiation and magnetic fields. Magellan, released from Space Shuttle Atlantis in May 1989, uses a synthetic aperture radar to probe through Venus' dense atmosphere to map its planetary surface. A computer animation simulates flying over the surface of Venus.

This video gives a historical survey of philosophy and scientific study of the nature of the surface of Mars and

discussion of whether life existed or exists on Mars. Several Lewis researchers recount early telescope observations of Mars including the identification of 'channels' or possible ancient waterways on the surface. An overview of the accomplishments of the Mariner spacecraft in mapping the surface of Mars as well as a detailed description of the Viking missions to Mars are presented. The results of the Viking Biology Experiment, conducted by the Viking Lander, are highlighted. There is also a discussion of the possible presence of monuments and a huge 'face' on the Martian surface. The video includes several computer simulations of flight over the Martian surface.

This film shows the landing and the three lunar traverses in the highland region of the moon, near the crater descartes. It includes an astronaut's eye view from the rover, lunar grand prix, discovery of the house-sized rock, lunar lift-off and eva 173,000 miles above the earth. Microphones and cameras in mission control record the emergency problem solving during the prelanding crisis and the reactions of scientists on earth as the astronauts explore the moon.

The decade of 1969-1979 is seen as the time when lunar science emerged from the dark ages as a result of the geophysical and sample investigations made possible by the Apollo flights to the moon. After a brief summary of the Apollo missions and laboratory investigative techniques, the film treats the major epochs in lunar history uncovered by the investigations. Finally, the moon is depicted as having a practical role in the future of science and technology, as well as

serving as the pattern for the future exploration of space.

The 1971 Apollo 14 Mission to Fra Mauro, a lunar highland area, is highlighted in this video. The mission's primary goal was the collection of lunar rocks and soil samples and lunar exploration. The soil and rock sampling was for the geochronological determination of the Moon's evolution and its comparison with that of Earth. A remote data collection station was assembled on the Moon and left for continuous data collection and surface monitoring experiments. The Apollo 14 astronauts were Alan B. Shepard, Edgar D. Mitchell, and Stuart A. Rossa. Astronauts Shepard and Mitchell landed on the Moon (February 5, 1971) and performed the sampling, the EVA, and deployment of the lunar experiments. There is film-footage of the lunar surface, of the command module's approach to both the Moon and the Earth, Moon and Earth spacecraft launching and landing, in-orbit command- and lunar-module docking, and of Mission Control.

This NASA JPL (Jet Propulsion Laboratory) video presents a collection of the best videos that have been published of the Voyager mission. Computer animation/simulations comprise the largest portion of the video and include outer planetary magnetic fields, outer planetary lunar surfaces, and the Voyager spacecraft trajectory. Voyager visited the four outer planets: Jupiter, Saturn, Uranus, and Neptune. The video contains some live shots of Jupiter (actual), the Earth's moon (from orbit), Saturn (actual), Neptune (actual) and Uranus (actual), but is mainly comprised of computer animations of these planets and their moons. Some of the individual short videos that are compiled are entitled: The Solar System; Voyage to the Outer Planets; A Tour of the Solar System; and the Neptune Encounter. Computerized simulations of Viewing Neptune from Triton, Diving over Neptune to Meet Triton, and Catching Triton in its Retrograde Orbit are included. Several animations of Neptune's atmosphere, rotation and weather features as well as significant discussion of the planet's natural satellites are also presented.

This NASA JPL (Jet Propulsion Laboratory) video production is a compilation of the best short movies and computer simulation/animations of the Galileo spacecraft's journey to

Jupiter. A limited number of actual shots are presented of Jupiter and its natural satellites. Most of the video is comprised of computer animations of the spacecraft's trajectory, encounters with the Galilean satellites Io, Europa and Ganymede, as well as their atmospheric and surface structures. Computer animations of plasma wave observations of Ganymede's magnetosphere, a surface gravity map of Io, the Galileo/Io flyby, the Galileo space probe orbit insertion around Jupiter, and actual shots of Jupiter's Great Red Spot are presented. Panoramic views of our Earth (from orbit) and moon (from orbit) as seen from Galileo as well as actual footage of the Space Shuttle/Galileo liftoff and Galileo's space probe separation are also included.

This videotape is a compilation of the best NASA JPL (Jet Propulsion Laboratory) videos of the Mars Pathfinder and Mars Global Surveyor missions. The mission is described using animation and narration as well as some actual footage of the entire sequence of mission events. Included within these animations are the spacecraft orbit insertion; descent to the Mars surface; deployment of the airbags and instruments; and exploration by Sojourner, the Mars rover. JPL activities at spacecraft control during significant mission events are also included at the end. The spacecraft cameras pan the surrounding Mars terrain and film Sojourner traversing the surface and inspecting rocks. A single, brief, processed image of the Cydonia region (Mars face) at an oblique angle from the Mars Global Surveyor is presented. A description of the Mars Pathfinder mission, instruments, landing and deployment process, Mars approach, spacecraft orbit insertion, rover operation are all described using computer animation. Actual color footage of Sojourner as well as a 360 deg pan of the Mars terrain surrounding the spacecraft is provided. Lower quality black and white photography depicting Sojourner traversing the Mars surface and inspecting Martian rocks also is included.

This video is a compilation of visualizations, animation and some actual shots from the Galileo mission. It shows the trajectories of the mission around Jupiter that took the mission to Jupiter, and the various orbits of the spacecraft around the planet, that allowed for the views of several of Jupiter's moons from which the visualizations of this video are taken. It mainly shows the visualizations of the Galileo's view of Jupiter's atmosphere, Io, Ganymede, and Europa. There is no spoken presentation, the views are announced with slides prior to the presentation. Orchestrated selections from Vivaldi's Four Season's serves as background.

This video is a compilation of three short videos related to the Galileo mission. The first section shows animation of the descent of the Galileo probe into the atmosphere of Jupiter. It includes cutaway views of the atmosphere showing the differ-

ent layers. This descent will represent the first entry into the atmosphere of an outer planet in our solar system. A second section shows some live shots of the development and drop chute tests of the Galileo spacecraft. A third section is an animation that shows the Probe mission. It shows visualizations from the launch, including the Venus flyby, the separation of the probe and the orbiter, and the trajectory of the planetary arrival. It also shows the descent of the probe into the atmosphere.

A Press conference held on July 20, 1994 is presented. Leading off the press conference was an announcement about a major discovery that was made possible from the study of the impact. The participants in the panel were: (1) Roger Yelle from the University of Arizona, (2) Renee Prange of the Institute Astrophysique Spatiale, (3) Lucy McFadden of the University of California, and the University of Maryland, (4) David Levy, the co-discoverer of the Shoemaker-Levy comet. The moderator for this conference was Steven Maran of the Goddard Space Flight Center. Roger Yelle, who had been working on analyzing spectrographic evidence, made the announcement that sulfur in the form of S2 had been discovered. There was also discussion about the interactions of the atmosphere with the fragments. This interaction had caused a shift in the aurora of Jupiter. The observations of the impact sites made by amatuers were discussed. A summary of the observations from different observatories was also given. Included in these observations were reports from the airborne Kuiper Observatory Telescope and the McDonald observatory.

This video has five sections. The first is a live discussion of the information that scientists hope to gain by the Galileo flyby of the Moon. This section has no introduction. There is a great deal of the discussion about the lunar craters and lunar volcanism. There is also some discussion of the composition of the far side of the moon. The second section is a short animation that shows the final step to Jupiter with particular emphasis on the gravitational assisted velocity boost, which was planned to give the spacecraft the requisite velocity to make the trip to Jupiter. The next section is an update of the status of the flyby of the Moon, and the Earth, with an explanation of the trajectory around the earth, and the moon. A photograph of the tracking station in Canberra, Australia is included. The next section is a tour of a full-scale model of the spacecraft. The last section is a discussion with the person charged with the procurement of the instrumentation aboard the spacecraft; the importance of the lunar flyby to assist in the calibration of the instruments is discussed.

The main focus of this lecture is to discuss the relative size of the planets, the formation of the solar system, details of atmospheric motion (atmospheric dynamics), the aspects of the magnetic fields, different ring systems, and the Triton satellite. The study evolves around the planets of Jupiter, Saturn, Uranus, and Neptune. Their temperature and absorption properties of the ice are discussed. Two of the chemicals being absorbed by the ice are ammonia and methane. Also discussed

are the belt and zonal circulation models, jet streams, plumes and clouds, magnetic fields, planetary rings, the pressure on Triton, the atmosphere of Titan, Callisto, Aria, Ganymede, Ariel, Miranda, Io, Europa, Amalthea, Rhea, Dione, Tethys, Enceladus, Mimas, Hyperion, Oberon, Titania, and Umbriel. The lecture also contained some computerized simulation and various images from Voyager.

A press conference held on July 21, 1994, about the impact of some of the fragments from Comet Shoemaker Levy is presented. The press conference opened with a still of Jupiter, showing the impact site of several fragments. The following people were on the panel: (1) Hal Weaver, from the Space Telescope Science Institute, (2) Rita Beebe from New Mexico State University, (3) Lucy McFadden from the University of California and the University of Maryland, (4) David Levy, the co-discoverer of the Shoemaker-Levy comet. The moderator was Eugene Shoemaker. The discussion was about the impact of the fragments on Jupiter. There were 21 pieces that were counted from earlier observations. There was some discussion about the further fragmentation of Q into two pieces. There was also some discussion about the impact on the planet of several fragments. These were due to hit ten hours apart on about the same spot. There were reports from the observatories around the world, including a tape from the Lowell Observatory, a summary of the views from the Galileo orbiter, a video of the impacts from the G fragment, and views of the results from the impact of the C and G fragments as viewed from Australia.

This NASA Kennedy video production presents Part 3 of a press conference held at JPL on August 8, 1989. The briefing in its entirety covers the Galileo Project's mission design from launch to completion in 1997 and is moderated by JPL Public Information Mgr. Robert Macmillan. Part 3 of the 3 part video series centers on the Galileo science goals, which are to explore not only Jupiter but the entire Jovian system, and the individual instruments that will make these objectives possible. Dr. Torrence V. Johnson (Project Scientist) introduces Dr. Richard Young (Probe Scientist (AMES)) and Dr. Clayne M. Yeates (Acting Science Mission Design Manager) who discuss the six main instruments included on the Probe and the Orbiter experiments and instrumentation, respectively. The video is rounded out by a period in which the Science Writer's are given an opportunity to ask questions of the seven member panel.

A panel discussion held on July 17, 1994, about the impact of the P/Shoemaker-Levy 9 (SL9) comet with Jupiter and its observable effects on Jupiter's atmosphere, rings, satellites, and magnetosphere, is presented. The panelists were Dr. Eugene and Carolyn Shoemaker (from Lowell Observatory and US Geological Survey), the Shoemaker-Levy comet co-discoverers; David Levy, also the co-discoverer of the Shoemaker-Levy comet; and Dr. Heidi Hammel (from Massachusetts Institute of Technology). On this second day of impact, the discussion was focused on the impact of the fragments A, B, C, and D. Dr. Hammel, who is also a Principal Investigator for the Hubble Imaging Team at MIT, presents preliminary results of the study of images taken by the Hubble Space Telescope (HST). A summary of the observations from different observatories was also given. Included in these observations were reports from the W.M. Keck Observatory, and Infrared Telescope Facility (IRTF) at Mauna Kea Observatory.

This NASA Kennedy Space Center (KSC) video release (Part 2 of 2) is a continuation of a press conference held at the Jet Propulsion Laboratory on Dec. 1, 1992, 7 days prior to the Galileo Earth-2 flyby. The video begins following presentations given by William J. O'Neil (Galileo Project Manager), Torrence Johnson (Galileo Project Scientist), Dr. Joseph Veverka (Galileo Imaging Team, Cornell University) and during a question and answer period given for the benefit of scientific journalists. Subjects include overall Galileo spacecraft health, verification of the Gaspra images timeframe, and the condition of certain scientific spacecraft instruments. Part 1 of this video can be retrieved by using Report No. NONP-NASA-VT-2000001077.

This NASA Kennedy Space Center (KSC) video release (Part 1 of 2) begins with a presentation given by William J. O'Neil (Galileo Project Manager) describing the status and position of the Galileo spacecraft 7 days prior to the Galileo Earth-2 flyby. Slides are presented including diagrams of the Galileo spacecraft trajectory, trajectory correction maneuvers, and the Venus and asteroid flybys. Torrence Johnson (Galileo Project Scientist) follows Mr. O'Neil with an explanation of the Earth/Moon science activities that will be undertaken

during the second Galileo/Earth encounter. These activities include remote sensing, magnetospheric and plasma measurements, and images taken directly from Galileo of the Earth and Moon. Dr. Joseph Veverka (Galileo Imaging Team, Cornell University) then gives a brief presentation of the data collected by the first Galileo/Gaspra asteroid flyby. Images sampled from the 57 photographs taken of Gaspra are presented along with discussions of Gaspra's morphology, shape and size, and surface features. These presentations are followed by a question and answer period given for the benefit of scientific journalists whose subjects include overall Galileo spacecraft health, verification of the Gaspra images timeframe, and the condition of certain scientific spacecraft instruments. Part 2 of this video can be retrieved by using Report No. NONP-NASA-VT-2000001078.

Galileo Mission Science Briefing
Jul. 21, 1989; In English; Videotape: 1 hr. 1 min. 32 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-1999206978; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

The first of two tapes of the Galileo Mission Science press briefing is presented. The panel is moderated by George Diller from the Kennedy Space Center (KSC) Public Affairs Office. The participants are John Conway, the director of Payload and operations at Kennedy; Donald E. Williams, Commander of STS-43, the shuttle mission which will launch the Galileo mission; John Casani, the Deputy Assistant Director of Flight Projects at the Jet Propulsion Lab (JPL); Dick Spehalski, Galileo Project Manager at JPL; and Terrence Johnson, Galileo Project Scientist at JPL. The briefing begins with an announcement of the arrival of the Galileo Orbiter at KSC. The required steps prior to the launch are discussed. The mission trajectory and gravity assists from planetary and solar flybys are reviewed. Detailed designs of the orbiter are shown. The distance that Galileo will travel from the sun precludes the use of solar energy for heat. Therefore Radioisotope heater units are used to keep the equipment at operational temperature. A video of the arrival of the spacecraft at KSC and final tests and preparations is shown. Some of the many science goals of the mission are reviewed. Another video showing an overview of the Galileo mission is presented. During the question and answer period, the issue of the use of plutonium on the mission is broached, which engenders a review of the testing methods used to ensure the safety of the capsules containing the hazardous substance. This video has actual shots of the orbiter, as it is undergoing the final preparations and tests for the mission.

Report No(s): NONP-NASA-VT-2000008134; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

This NASA Kennedy Space Center (KSC) video release presents a news briefing from the Jet Propulsion Laboratory (JPL) featuring video presentations by Dr. Alfred McEwen (Univ. of Arizona, Lunar and Planetary Lab.), Dr. Ronald Greeley (Arizona St. Univ.), Dr. Andrew Ingersoll (California Inst. of Tech.,), and Dr. Diana Blaney (Jet Propulsion Lab.). Discussions center on the atmospheric and surface features of Jupiter and two of its moons, Europa and Io. Possible energy mechanisms that create atmospheric features of Jupiter, such as the Great Red Spot, as well as possible thunderstorm and lightning activity associated with these features are included. Discussions of the craters and fractures on the icy surface of Europa, surface features of Io, two of which are named Loki and Pele, believed to be of volcanic origin, as well infrared observations of volcanism on Io are presented. The individual presentations are followed by a question and answer period with questions posed by scientific journalists from JPL and other NASA centers. The video ends with computer animations, as well as actual footage, of features on Jupiter and its satellites taken from the Galileo spacecraft. Some of these images were seen previously in the individual presentations.

This NASA Kennedy Space Center (KSC) video release presents Part 1 of a press conference regarding the successful entry of the Galileo Space Probe into Jupiter's atmosphere. The press conference panel is comprised of twelve principal investigators and project scientists that oversee the Galileo mission. Among these panelists, William J. O'Neil (Jet Propulsion Lab.) begins the video praising all of the scientists that worked on the orbiter mission. He then presents a visual overview of Galileo's overall mission trajectory and schedule. Marcie Smith (NASA Ames Research Center) then describes the Galileo Probe mission and the overall engineering and data acquisition aspects of the Probe's Jupiter atmospheric entry. Dr. Richard Young (NASA Ames Research Center) follows with a brief scientific overview, describing the measurements of the atmospheric composition as well as the instruments that were used to gather the data. Atmospheric pressure, temperature, density, and radiation levels of Jupiter were among the most important parameters measured. It is explained that these measurements would be helpful in determining among other things, the overall dynamic meteorology of Jupiter. A question and answer period follows the individual presentations. Atmospheric thermal structure, water abundances, wind profiles, radiation, cloud structure, chemical composition, and electricity are among the topics discussed. Parts 2 and 3 of the press conference can be found in document numbers NONP-NASA-VT-2000001074, and NONP-NASA-VT-2000001075.

This videotape presents a panel discussion press conference about the attempts to discover if there is moisture in the atmosphere of Jupiter. David Seidel, of the Jet Propulsion Laboratory (JPL) moderates the discussion. The panel consists of Andrew Ingersoll, California Institute of Technology, Tobias Owen, of the University of Hawaii, Glenn Orton, Robert Carlson of JPL, and Ashwin Vasavada, a graduate student at Cal Tech. Each of the panelists discusses evidence for moisture in Jupiter's atmosphere. They show video tapes of either animation or shots from the Galileo mission or diagrams of the atmosphere of Jupiter. The videos clips that are shown, include a brief summary of the Galileo mission. A diagram showing the layers of Jupiter's atmosphere is discussed. One panelist discusses and shows shots from the nightside of Jupiter. Another video clip shows evidence for convergence downdrafts around dry spots. Evidence for thunderstorms and updrafts is also reviewed. Shots of the giant red spot on Jupiter are shown, and explanations are given as to what it may be.

This video presents a Magellan Science update on the most recent findings from the Magellan Mission to Venus. Brian Dunbar, NASA Public Affairs, introduces Dr. Wes Huntress, Division Director Solar System and Exploration Division. Dr. Huntress explains the Magellan Mission to Venus, which tested the temperature and emissivity of Venus, and collected high resolution radar imagery of 92% of the surface of the planet. Dr. Steve Saunders, Magellan Project Scientist, Jet Propulsion Lab, presents a visual global view of the North Pole of Venus. He also presents planet wide patterns of fracture on Venus. Dr. Saunders showed a video presentation of radio mapping results from Artemis. Dr. Wood, Radar Investigator, Smithsonian Astrophysical Observatory explains Mat Mons, which is the second highest mountain on Venus. Dr. John Wood also presents a video presentation of his findings. Dr. Gordon Pettengill, Principle Investigator, Massachusetts Institute of Technology, presents a video on the Topography of the Magellan Mission, which is able to give resolution ten times finer and further into the South and into the North than was possible earlier. The video of the Magellan Science update ends with a question and answer period.

Report No(s): NONP-NASA-VT-2000081541; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This NASA Kennedy Space Center video presents live footage of the delivery of the Titan III Mars Explorer Transfer Orbital Stage (TOS) to the Payload Hazardous Servicing Facility (PHSF). The TOS is a single-stage, solid propellant upper stage vehicle used to propel a spacecraft from low Earth orbit toward it's ultimate destination. The TOS is delivered to the PHSF where it is designed to accommodate a variety of NASA and NASA customer payloads and can be used as a

payload processing facility (PPF) or a hazardous processing facility (HPF).

Aug. 24, 1993; In English; Videotape: 55 min. 1 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-200081550; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The Mars Observer mission spacecraft was primarily designed for exploring Mars and the Martian environment. The Mars Observer was launched on September 25, 1992. The spacecraft was lost in the vicinity of Mars on August 21, 1993 when the spacecraft began its maneuvering sequence for Martian orbital insertion. This videotape shows a press briefing, held after the spacecraft had not responded to attempts to communicate with it, to explain to the press the problems and the steps that were being taken to re-establish communication with the spacecraft. The communications had been shutdown prior to the orbital insertion burn to protect the instruments. At the time of the press conference, the communications system was still not operational, and attempts were being made to re-establish communication. Bob McMillan of the Public Affairs Office at JPL gives the initial announcement of the continuing communication problem with the spacecraft. Mr. McMillan introduces William Piotrowski, acting director of solar system exploration, who reiterates that there is indeed no communication with the Observer spacecraft. He is followed by Glenn Cunningham, the Project Manager of the Mars Observer who speaks about the attempts to re-establish contact. Mr. Cunningham is followed by Satenios Dallas, the Mission Manager for the Mars Observer Project, who speaks about the sequence of events leading up to the communication failure, and shows an animated video presenting the orbital insertion maneuvers. The briefing was then opened up for questions from the assembled press, both at JPL and at the other NASA Centers. The questions are about the possible reasons for the communication failure, and the attempts to restore communications with the spacecraft. Dr. Arden L. Albee, chief scientist for the Mars Observer Mission, joins the other panel members to answer questions. At the end of the press briefing the animation of the Mars orbital insertion is shown again.

Mars Observer Lecture: Mars Orbit Insertion
Dodd, Suzanne R., Personal Name; Aug. 17, 1993; In English; Videotape: 45 min. 45 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000081538; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

The Mars Observer mission spacecraft was primarily designed for exploring Mars and the Martian environment. The Mars Observer was launched on September 25, 1992. The spacecraft was lost in the vicinity of Mars on August 21, 1993 when the spacecraft began its maneuvering sequence for Martian orbital insertion. This videotape shows a lecture by Suzanne R. Dodd, the Mission Planning Team Chief for the Mars Observer Project. Ms Dodd begins with a brief overview of the mission and the timeline from the launch to orbital insertion. Ms Dodd then reviews slides showing the trajectory of the spacecraft on its trip to Mars. Slides of the spacecraft being constructed are also shown. She then discusses the Mars orbit insertion and the events that will occur to move the spacecraft from the capture orbit into a mapping orbit. During the trip to Mars, scientists at JPL had devised a new strategy,

called Power In that would allow for an earlier insertion into the mapping orbit. The talk summarizes this strategy, showing on a slide the planned transition orbits. There are shots of the Martian moon, Phobos, taken from the Viking spacecraft, as Ms Dodd explains that the trajectory will allow the orbiter to make new observations of that moon. She also explains the required steps to prepare for mapping after the spacecraft has achieved the mapping orbit around Mars. The lecture ends with a picture of Mars from the Observer on its approach to the planet.

Mars Observer Press Conference
Aug. 25, 1993; In English; Videotape: 18 min. 5 sec. playing time, in color, with sound
Report No(s): NONP-NASA-VT-2000081551; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

Footage shows Bob MacMillin, NASA's Public Information Office, as he introduces the Mars Observer Project Manager, Glen Cunningham. Glen is shown addressing the current status of the Mars Observer communication system, the inability of NASA to establish contact, and the action that is currently being taken to establish contact with the spacecraft. Glen is also seen answering questions from both the audience as well as other NASA Centers.

NASA Today - Mars Observer Segment (Part 4 of 6)
Aug. 20, 1993; In English; Viodeotape: 16 min. 20 sec. playing time, in color with sound
Report No(s): NONP-NASA-VT-200096690; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This videotape consists of eight segments from the NASA Today News program. The first segment is an announcement that there was no date set for the launch of STS-51, which had been postponed due to mechanical problems. The second segment describes the MidDeck Dynamic Experiment Facility. The third segment is about the scheduled arrival of the Mars Observer at Mars, it shows an image of Mars as seen from the approaching Observer spacecraft, and features an animation of the approach to Mars, including the maneuvers that are planned to put the spacecraft in the desired orbit. The fourth segment describes a discovery from an infrared spectrometer that there is nitrogen ice on Pluto. The fifth segment discusses the Aerospace for Kids (ASK) program at the Goddard Space Flight Center (GSFC). The sixth segment is about the high school and college summer internship programs at GSFC. The seventh segment announces a science symposium being held at Johnson Space Center. The last segment describes the National Air and Space Museum and NASA's cooperation with the Smithsonian Institution.

Worlds Smaller than Saturn

Mar. 01, 2001; In English; Videotape: 64 min. 7 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001030026; No Copyright; Avail: CASI; B04, Videotape-Beta; V04, Videotape-VHS

Computerized animations show the following: (1) an artist's conception of a Saturn-like extrasolar planet; (2) star and planet motion; and (3) young stellar disk and planet formation. Footage shows the outside of the Mauna Kea Observatories in Hawaii and Geoff Marcy and Paul Butler inside while they are processing information. Then a press conference,'Worlds Smaller than Saturn', is seen. Anne Kinney, Origins Science Director, NASA Headquarters, introduces Geoff Marcy, Paul Butler, Alan Boss, and Heidi Hammel. They discuss the discovery of the two new Saturn-sized extrasolar planets that are orbiting the stars HD46375 and 79 Seti, giving details on the search technique and size distribution. They then answer questions from the press.

Plentiful Water Detected in Mars Northern Hemisphere

June 26, 2003; In English; 6 min., 56 sec. playing time, in color, with sound

Report No(s): G03-043; No Copyright; Avail: CASI; V01, Videotape-VHS; B01, Videotape-Beta

NASA's Mars Odyssey Spacecraft is revealing new details about a changeable array of frozen layers on Northern Mars. Odyssey's neutron and gamma-ray sensors have tracked seasonal changes as layers of 'dry ice' carbon dioxide frost or snow accumulated during northern Mars' winter and then dissipate in the spring to expose a permafrost soil layer rich in water ice. The research is presented in a paper in the June 27, 2003 issue of the Journal Science. This video contains a slide show interspersed with computer generated graphics of seasonal ice distribution and thickness on Mars. The graphics utilize Viking and Mars Orbiter Laser Altimeter (MOLA) data as well as Odyssey data.

Final Blaze of Glory

[2001]; In English; Videotape: 14 min. 57 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2001026549; No Copyright; Avail: CASI; B01, Videotape-Beta; V01, Videotape-VHS

This video gives an overview of planetary nebulae through a computerized animation, images from the Hubble Space Telescope (HST), and interviews with Space Telescope Science Institute Theorist Dr. Mario Livio. A computerized animation simulates a giant star as it swallows its smaller companion. HST images display various planetary nebulae, such as M2-9 Twinjet Nebula, NGC 3568, NGC 3918, NGC 5307, NGC 6826, NGC 7009, and Hubble 5. An artists conception shows what our solar system might look like in a billion years when the Sun has burned out and cast off its outer layers in a shell of glowing gas. Dr. Livio describes the shapes of the planetary nebulae, gives three reasons to study planetary nebulae, and what the observations made by HST have meant to him. A succession of 17 HST images of planetary nebulae are accompanied by music by John Serrie.

STS-37: Gamma Ray Observatory

Jan. 29, 1991; In English; Videotape: 16 min. 2 sec. playing time, in color, with sound

Report No(s): NONP-NASA-VT-2000013426; No Copyright; Avail: CASI; B02, Videotape-Beta; V02, Videotape-VHS

This NASA Kennedy Space Center (KSC) video release presents footage of pre-flight activities involving the STS-37 primary payload, the Gamma Ray Observatory (GRO). The GRO is shown being removed from the transport aircraft to one of the runways at Kennedy. Other footage includes Kennedy work crews moving the GRO into position as well as discussions between the STS-37 astronauts and the work crews regarding GRO operation.

This video gives an historical overview of Langley Research Center's major achievements in aeronautics and astronautics research between the years 1917-1967. Historical footage accompanies explanation of research into wind tunnel, spin tunnel, and hydrodynamic test tanks for studying aircraft airflow, wartime research into overwater combat ditching, diving, and braking, the X series aircraft experiments with supersonic flight, helicopter and vertical Take Off and Landing (VTOL) aircraft, airport landing studies, and early prototypes for the Space Shuttle.

19950026963 NASA Lyndon B. Johnson Space Center, Houston, TX, USA
Twenty-five years of progress. Part 1: Birth of NASA. Part 2: The Moon-a goal
JAN 1, 1984; In English
Report No(s): NASA-TM-110819; NAS 1.15:110819; CMP-178-0045B; NONP-NASA-VT-95-61007; No Copyright; Avail: CASI; B03, Videotape-Beta; V03, Videotape-VHS

Historical footage (1958 - 1983) concerning NASA's Space Program, is reviewed in this two-part video. Host, Lynn Bondurant describes the birth of NASA and its accomplishments through the years. Part one contains: the launch of Russian satellite Sputnik on October 4,1957; the first dog (Soviet) in space; NACA Space Research, Explorer-6; and still photographs of various Space projects. Tiros 1 experimental weather satellite, Microgravity simulators, Echo 1 passive communications satellite, and the first U.S. manned spaceflight Mercury are included in part two. The seven Mercury astronauts are: Captain Donald Slayton, Lt. Commander Alan Shepard, Lt. Commander Walter Schirra, Captain Virgil Grissom, Lt. Col. John Glenn Jr., Captain Leroy Cooper Jr, and Lt. Malcolm Scott Carpenter. Also included are an ongoing interview (throughout the video) with NASA's first Administrator Keith Glennan, the first flight in 1961 with Enos, a chimpanzee, President Kennedy's speech in Washington about the Space Program, Project Gemini - the 2-manned space flights, and the recovery of Virgil Grissom from splash down.

Subject Term Index

2001 MARS ODYSSEY
Plentiful Water Detected in Mars Northern Hemisphere – 405

ABERRATION
Hubble Space Telescope Briefing: HST Science Overview – 381

ACCELERATION (PHYSICS)
SAMS (space acceleration measurement system) – 334
Space acceleration measurement system – 371

ACCELEROMETERS
SAMS (space acceleration measurement system) – 334
Space acceleration measurement system – 371
STS-40/SLS-1: Lift to Cargo Bay – 195

ACCIDENT INVESTIGATION
A/C 67 Investigation Board Final Report – 375
Shuttle 51L: Challenger – 43

ACCIDENT PREVENTION
The 1971 highlights – 409

ACCIDENTS
NACA fire crash research – 1

ACID RAIN
What's killing the trees? – 350

ACOUSTIC LEVITATION
STS-94 Day 09 Highlights – 101

ACOUSTICS
Acoustic climb to cruise test – 7

ACTIVITY (BIOLOGY)
STS-78 Flight Day 8 – 80

ACTS
STS-51 ACTS/TOS and SPAS Deploy – 234
STS-51 ACTS/TOS Payload Briefing – 206

ADAPTATION
STS-81 Flight Day 7 – 85

ADAPTERS
Fuse Lift to Payload Adapting Fixture (PAF) at Hangar A& – 158
STS-88 Day 03 Highlights – 125

ADVANCED LAUNCH SYSTEM (STS)
STS 63 flight day 4 highlights/MIR-Shuttle rendezvous – 45

ADVANCED SOLID ROCKET MOTOR (STS)
Advanced Solid Rocket Motor – 335
ASRM testing at Stennis Space Center (proposed) – 335

ADVANCED TECHNOLOGY LABORATORY
STS-66 mission highlights resource tape – 46

AERIAL EXPLOSIONS
Challenger Anniversary Resource Tape – 66

AERIAL PHOTOGRAPHY
Johnson Space Center and downtown Houston, Texas aerials – 343

AEROACOUSTICS
Flying on the ground – 369

AEROBATICS
STS-103 Flight Crew Departs from Shuttle Landing Facility in T-38 for Acrobatics Flight, Discovery – 145

AERODYNAMIC CHARACTERISTICS
Wind Tunnel Tests of an Inflatable Airplane – 2

AERODYNAMIC LOADS
Wind Tunnel Tests of an Inflatable Airplane – 2

AERODYNAMIC STABILITY
STS-77 Flight Day 9 – 73
Wind shear and heavy rain – 354
Wind Tunnel Tests of an Inflatable Airplane – 2

AERODYNAMIC STALLING
Wind Tunnel Tests of an Inflatable Airplane – 2

AERODYNAMICS
The world's largest wind tunnel – 9

AERONAUTICAL ENGINEERING
Dryden summer 1994 update – 411

AERONAUTICS
NACA-NASA: 75 years of flight – 407

AEROSPACE ENGINEERING
Aerospace test facilities at NASA LERC Plumbrook – 28
Hernandez Engineering: NASA – 321
Highlights, 1981 – 406
Hurricane Andrew mission – 354
NACA-NASA: 75 years of flight – 407

STS-35/Astro-1: Editors Work Tape – 185

STS-36 crew EVA prep and post-training, bailout exercises, final bench review – 363

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – 188

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – 188

STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 188

STS-37/GRO Crew Arrival and TCDT Activities – 178

STS-38 crew training: Habitation equipment procedures, bailout in CCT, 70mm photo class, EVA prep and post, and firefighting – 363

STS-40 TCDT – 198

STS-41 crew training bailout in CCT, 16mm camera class EVA prep, habitation equipment procedures, and food tasting – 28

STS-41 Ulysses TCDT Activities – 199

STS-44 Crew Training – 225

STS-44 TCDT Activities – 205

STS-45/Atlas-1 TCDT Activities – 209

STS-46 Crew Training – 207

STS-47 Astronaut Crew at Pad B for TCDT, Emergency Egress Training, and Photo Opportunity – 218

STS-47 Astronaut Crew Training Clip – 235

STS-49 Astronaut Flight Crew – 233

STS-50 TCDT Activities – 225

STS-52 Astronaut Crew Activities for TCDT – 228

STS-53 TCDT Activities – 236

STS-53 TCDT Training and Press Q&A at Pad A – 231

STS-54 Astronaut Crew Emergency Egress Training, Press Q&A, TCDT – 235

STS-55 Emergency Egress Training/Photo Opportunity at Pad A – 220

STS-56 Atlas-2/TCDT Activities – 216

STS-59 Crew Arrival – 236

STS-69 TCDT/Crew Emergency Egress, Walk Down, and Press Showing – 235

STS-88 Endeavour: TCDT-Press Q & A at KSCNF Auditorium – 167

STS-92 Crew Training – 212

STS-93: Columbia, Flight Crew Training with M-113 for Chandra – 157

STS-93 Crew Training – 155

STS-95 CEIT in the OPF-2 and the MPPF – 163

STS-96: Crew Training at SPACEHAB – 159

STS-96 Crew Training, Mission Animation, Crew Interviews, STARSHINE, Discovery Rollout and Repair of Hail Damage – 165

STS-96 Crew Training – 131

STS-96 Discovery, Bench Review and SPACEHAB Familiarization at SPACEHAB – 161

STS-96: Expedition Crew #2 and 4 Work in Node #1 at the SSPF – 158

STS-96 Press Briefing and MODE-1 Egress Training for TCDT – 161

STS-96 TCDT Crew Arrival – 165

STS-97 Crew Training – 210

STS-98 Crew Interview: Bob Curbeam – 224

STS-98 Crew Interview: Ken Cockrell – 224

STS-98 Crew Interview: Mark Polansky – 226

STS-98 Crew Interview: Marsha Ivins – 224

STS-98 Crew Interview: Tom Jones – 224

STS-98 Crew Training – 221

STS-99 CEIT at the OPF High Bay-2, Endeavour, SRTM Mission – 174

STS-99 Crew Training – 156

TCDT STS-99 Crew at FSS/White Room – 172

The 61-M long duration sim video highlights resource tape – 26

STS-37: Gamma Ray Observatory – 405

CAPILLARY FLOW
Thermocapillary convection in evaporating sessile drops – 341

CARBON DIOXIDE
The atmosphere below – 352

CARDIOVASCULAR SYSTEM
Shuttle to Space Station. Heart assist implant. Hubble update. X-30 mock-up – 16

STS-78 Flight Day 2 – 79

STS-78 Flight Day 3 – 76

STS-90 Day 12 Highlights – 119

STS-90 Day 13 Highlights – 115

CARGO
STS-106 Crew Activity Report / Flight Day Highlights Day 2 – 200

STS-40/SLS-1: Lift to Cargo Bay – 195

STS-54 TDRS-F in Cargo Bay at Pad B – 234

STS-87 Mission Highlights Resources Tape – 128

CARTESIAN COORDINATES
Polynomials – 368

CASSINI MISSION
Life and the solar system: The CRAF and Cassini missions – 389

CASTING
STS-27 crew fire training and glove molding – 363

CATALOGS (PUBLICATIONS)
The future of bibliographic standards in a networked information environment – 377

CELESTIAL BODIES
Searching for Planets Around other Stars – 381

Space astronomy update – 380

CERAMICS
High temperature NASP engine seal development – 345

STS-47 Post Flight Press Conference – 76

CHALLENGER (ORBITER)
Challenger Anniversary Resource Tape – 66

Challenger's night flight – 15

Memorial service for the mission 51-L crew (edited) – 44

Shuttle 51L: Challenger – 43

STS-41G TCDT – 138

STS-51B Launch and Landing – 140

The 1982 highlights – 409

CHARACTER RECOGNITION

Freedom system Text and Graphics Systems (TAGS) – 365

CHARGE COUPLED DEVICES

HST Briefing: HST Science Overview – 381

CHECKOUT

Apollo 11 Facts Project: Earth Views and Crew Activities – 20

Apollo 13 Facts [On-Orbit Activities] – 23

Galileo probe spacecraft mission to Jupiter – 389

STS-100 Crew Activity Report: Flight Day 1 Highlights – 248

STS-102 Countdown Status Briefing – 246

STS-102 Crew Activity Report/Flight Day 1 Highlights – 240

STS-103 Mission Highlights Resource Tape (2 of 2) – 177

STS-26 SRB LRFT Forward Center Segment Joint Inspection – 139

STS-37 astronauts Ross and Apt during CETA hardware checkout – 363

STS-41G TCDT – 138

STS-43 post flight press conference – 52

STS-45 Atlas-1 Compiled Processing Footage – 227

STS-49 Endeavour/Compiled Video for Editors – 218

STS-53 TCDT O&C Exit – 232

STS-69 flight day 7 highlights – 56

STS-72 Flight Day 2 – 68

STS-72 Flight Day 4 – 76

STS-99 Countdown Status Briefing – 173

STS-99 Countdown Status Press Conference – 173

CHEMICAL ANALYSIS

STS-95 Day 08 Highlights – 123

CHEMICAL ENGINEERING

Chemical engineering: Measurements for a competitive age – 336

CHEMICAL PROPULSION

Low thrust space propulsion – 334

One fantastic ride – 335

CHEMICAL REACTIONS

All systems go! – 46

The atmosphere below – 352

CHEMOTHERAPY

STS-95 Day 02 Highlights – 123

CHICKENS

STS-29 crew with student experiment – 355

CHILDREN

Short walk to everywhere – 370

CHLOROFLUOROCARBONS

The atmosphere below – 352

CHRONIC CONDITIONS

Cool suit – 356

CIVIL AVIATION

Back to propellers – 8

Crash impact survival in light planes – 3

CLEAN ROOMS

ATLAS-SOHO: Satellite Arrival and Uncrating, Uncrating of the Propulsion Unit and Electric Module – 327

STS-31: Hubble in VPF Lift to Work Platform – 181

STS-34 Galileo PCR at Pad & Galileo in Atlantis – 179

STS-34: Galileo Processing – 181

STS-35: Astro-1 BBXRT Problem Area – 181

STS-37 Payload Gamma Ray Observatory Pad-B in PCR – 168

STS-37 The Payload bay door closing at PCR Pad B – 406

STS-93 CEIT with crew in the OPF-3 – 150

STS-93: CEIT with Crew in the OPF-3 – 159

STS-93: Crew Arrival and PR Location – 160

STS-99 Atlantis, Shuttle Radar Topography Mission (SRTM) in the MPPF with Technicians working – 167

STS-99 Payload Bay Door Opening at Pad 39A Endeavour – 168

STS-99 SRTM Lift and Insert into Canister – 169

XTE Payload at Hangar AO – 325

CLIMATE CHANGE

Glacier Bay, Alaska, from the Ground, Air, and Space – 349

Insight to global change: EOS/SAR mission – 351

The atmosphere below – 352

CLIMATE

Global climate study – 352

CLIMBING FLIGHT

Acoustic climb to cruise test – 7

Dutch Viking TROS Aktua Special – 328

STS-78 Flight Day 1 – 79

CLINICAL MEDICINE

Living well in space: Clinical care challenge – 357

Telemedicine Spacebridge – 357

CLOSED ECOLOGICAL SYSTEMS

Recycling in space – 359

CLOSING

STS-101: Crew Activity Report/Flight Day 8 Highlights – 191

STS-106 Crew Activities Report/Flight Day 10 Highlights – 211

STS-34: Galileo Payload Canister Doors Closing in VPF – 186

CLOSURES

STS-99 Payload Door Closure in Orbiter Processing Facility #2 Endeavour (SRTM) – 150

CLOUD COVER

Venus lightning – 354

COASTAL ZONE COLOR SCANNER

Coastal zone color scanner: Nimbus 7 – 354

COATINGS

Airflow research – 2

COCKPITS

Better way to fly – 5

STS-101: Atlantis Orbiter Upgrade Briefing – 193

COLLISIONS

Black Holes Shed Light on Galaxy Formation – 385

Colliding Galaxies: Hubble Space Telescope – 383

Galaxy Group Stephan's Quintet Video File HubbleMinute: Battle Royale in Stephan's Quintet – 386

COLOR PHOTOGRAPHY

Shuttle Earth Views, 1994 – 348

COLUMBIA (ORBITER)

Liftoff to learning: Assignment space – 51

STS-107 Crew Choice Television Highlights – 308

STS-107 Crew Interviews: Ilan Ramon, Mission Specialist – 294

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311

STS-37: TCDT Pad B Atlantis GRO (1 of 3) – 188

STS-37: TCDT Pad B Atlantis GRO (2 of 3) – 188

STS-43 post flight press conference – 52

STS-85 Day 02 Highlights – 105

STS-85 Day 07 Highlights – 105

STS-85 Day 09 Highlights – 104

X-29: Experiment in flight – 5

FLIGHT TRAINING

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311

STS-95 CEIT in the OPF-2 and the MPPF – 163

STS-95: Discovery Flight Crew Arrives at the Shuttle Landing Facility for TCDT – 160

STS-96 Crew Training, Mission Animation, Crew Interviews, STARSHINE, Discovery Rollout and Repair of Hail Damage – 165

FLOW DISTRIBUTION

Rotor stator CGI – 7

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – 338

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 3 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 4 of 4 – 338

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

FLOW VISUALIZATION

Airflow research – 2

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 343

Leading-edge vortex-system details obtained on F-106B aircraft using a rotating vapor screen and surface techniques – 2

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

FLUID DYNAMICS

STS-47 mission highlights resource tape – 53

STS-73 Mission Highlights Resource Tape – 75

FLUID FLOW

The 1988 computational fluid dynamics highlights – 341

FLUID INJECTION

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 343

FLUID JETS

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – 338

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 3 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 4 of 4 – 338

FLUIDS

ZENO: A critical fluid light scattering experiment – 341

FLY BY WIRE CONTROL

Dryden and transonic research – 1

FLYBY MISSIONS

Delta II Deep Space I Launch – 322

Galileo Earth/Moon News Conference – 398

Galileo Outreach Compilation – 394
Galileo Science Update – 400
Galileo Science Writers' Briefing – 397
Mars Surveyor '98 Animation From JPL – 189
STS-112 Post Flight Presentation – 303
Voyager Briefing: Expectations of the Neptune Encounter – 398
Voyager II Encounter with Neptune: Voyager/Neptune Briefing – 396

FOLDING STRUCTURES
STS-99 Crew Activities Report / Flight Day 11 Highlights – 166

FOOD PRODUCTION (IN SPACE)
Supporting life in space – 359

FOOD
Food for space – 363
International food research project – 361
STS-29 crew food tasting in building 45 – 361

FORECASTING
Forecasting earthquakes – 352

FOREST FIRES
Forest fire study – 350
Saving Yellowstone – 350
TOMS computer graphics – 350

FOREST MANAGEMENT
What's killing the trees? – 350

FORESTS
What's killing the trees? – 350

FOSSILS
Dino Fest – 355

FRAGMENTATION
Shoemaker-Levy 9 Comet Impact Briefing – 397

FRAGMENTS
Comet Shoemaker-Levy 9 Impact Press Conference – 396
Comet Shoemaker-Levy Impact: Briefing – 384

FREE FLOW
Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

FREE MOLECULAR FLOW
STS-87 Mission Highlights Resources Tape – 128

FREON
Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339
Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – 338

Galileo Science Summary October, 1997 – 395
Galileo Science Update: Observing Changes on Europa and in Jupiter's System – 399
Galileo Science Update – 400
Galileo Science Writers' Briefing – 397

Magellan, Galileo, and Ulysses – 389

STS-26 through STS-34, deploy activities – 407

STS-34 Galileo integrated deploy sim – 39

STS-34 Galileo PCR at Pad & Galileo in Atlantis – 179

STS-34: Galileo Processing – 181

STS-34: JPL RTG Safety Tests – 182

The 1970 highlights – 409

GAMMA RAY ASTRONOMY

STS-37 Gamma Ray Observatory Arrival and VPF Activities – 406

GAMMA RAY OBSERVATORY

STS-37: Gamma Ray Observatory (2 of 2) – 406

STS-37 Gamma Ray Observatory Arrival and VPF Activities – 406

STS-37: Gamma Ray Observatory Removal from Cannister at the PHSF – 406

STS-37: Gamma Ray Observatory – 405

STS-37 Mission Overview: Lead Flight Director Briefing – 165

STS-37 Payload Gamma Ray Observatory Pad-B in PCR – 168

STS-37 The Payload bay door closing at PCR Pad B – 406

STS-37/Atlantis/GRO – 167

STS-93 Crew Interview: Jeff Ashby – 154

The four great observatories – 379

GAMMA RAY TELESCOPES

STS-37 Gamma Ray Observatory Arrival and VPF Activities – 406

GANYMEDE

Galileo - Ganymede Family Night – 402

Galileo Science Summary October, 1997 – 395

GARBAGE

STS-35 crew trash compactor briefing – 25

GAS GIANT PLANETS

Astronomers Ponder Lack of Planets in Globular Cluster – 386

Searching for Planets Around other Stars – 381

GAS GUNS

High velocity gas gun – 317

GAS JETS

Pressure Wave Propagation in a Screech Cycle – 95

GEMINI 8 FLIGHT

Gemini 8, This is Houston, flight – 320

GEMINI FLIGHTS

Legacy of Gemini – 14

GEMINI SPACECRAFT

Gemini 8, This is Houston, flight – 320

GENERAL AVIATION AIRCRAFT

Crash impact survival in light planes – 3

Revitalizing general aviation – 7

GENERAL OVERVIEWS

Dryden overview for schools – 10

Dryden tour tape, 1994 – 10

Dryden year in review: 1992 – 410

LLRV/Apollo 11 25th anniversary – 13

Mars: Five views on what is known – 389

GEOCHRONOLOGY

Apollo 14 mission to Fra Mauro – 394

GEODETIC ACCURACY

Improved mapping system – 347

GEOGRAPHIC DISTRIBUTION

Shuttle Earth Views, 1994 – 348

GEOGRAPHY

Live from Antarctica: The coldest, windiest place on Earth – 353

Sines and cosines. Part 2 of 3 – 368

GEOLOGICAL SURVEYS

Forecasting earthquakes – 352

Sines and cosines. Part 2 of 3 – 368

The tunnels of Samos – 368

GEOLOGY

Live from Antarctica: The coldest, windiest place on Earth – 353

GEOMAGNETIC TAIL

Delta II Geotail Test D5040 – 324

Delta II/Geotail Launch with Pre-Launch Activities – 31

Delta II/Geotail Pre-Launch Press Conference – 324

Geotail Video News Release – 327

GEOMAGNETISM

STS-82 Day 07 Highlights – 92

GEOS SATELLITES (ESA)

Atlas First Stage Erection, GEOS I – 33

Atlas GEOS-J Arrives at KSC and Uncanning at Astrotech – 325

GEOS-I Satellite Applications Briefing – 328

GEOSARI PROJECT

Atlas GEOS-J Arrives at KSC and Uncanning at Astrotech – 325

GEOSYNCHRONOUS ORBITS

Atlas Centaur/GOES-J News Conference – 154

GET AWAY SPECIALS (STS)

GAS highlights, 1988 – 11

STS-40 Get Away Special Experiment Preflight Briefing – 198

STS-68 post flight presentation – 44

STS-69 postflight presentation – 57

STS-72 Flight Day 1 – 70

GIANT STARS

Final Blaze of Glory – 405

Giant Star Clusters Near Galactic Core – 385

GIOTTO MISSION

Comet Halley returns – 318

GLACIAL DRIFT

Glacier Bay, Alaska, from the Ground, Air, and Space – 349

GLACIERS

Glacier Bay, Alaska, from the Ground, Air, and Space – 349

GLIDERS

Perseus: Global watcher – 5

GLOBAL POSITIONING SYSTEM

Forecasting earthquakes – 352

STS-77 Flight Day 6 – 74

STS-99 Countdown Status Briefing – 173

GLOBAL WARMING

Global Greenhouse Expedition – 350

The atmosphere below – 352

GLOBULAR CLUSTERS

Microlensing: Globular Cluster M22 Video File – 382

STS-67 mission highlights resource tape – 47

GLOVES

STS-27 crew fire training and glove molding – 363

STS-82 Day 07 Highlights – 92

STS-82 Day 08 Highlights – 92

STS-82 Day 09 Highlights – 92

STS-82 Day 10 Highlights – 93

STS-82 Mission Highlight Presentation – 95

STS-82 Post Flight Presentation – 94

STS-93 Crew Interview: Jeff Ashby – 154

STS-95 Mission Highlights Resources Tape – 130

The 1979 highlights – 388

The 1982 highlights – 409

The four great observatories – 379

HUMAN BEHAVIOR

Astro smile – 37

STS-78 Flight Day 11 – 77

STS-78 Flight Day 12 – 80

HUMAN BODY

All systems go! – 46

STS-78 Flight Day 11 – 77

STS-78 Flight Day 12 – 80

STS-78 Flight Day 13 – 77

HUMAN FACTORS ENGINEERING

Human factor studies – 25

HUMAN PERFORMANCE

Human factor studies – 25

STS-78 Flight Day 8 – 80

HURRICANES

Hurricane Andrew mission – 354

HYDRAULIC EQUIPMENT

STS-31: APU Controller Removal – 178

STS-55 Hydraulic Work in Aft Section of Columbia – 229

STS-76 Flight Day 2 – 64

HYDRODYNAMICS

Langley's 50th year – 410

Riblets: New speed technology – 341

HYDROGEN

STS-36: Hydrogen Turbo Pump Removal Preps – 346

HYDROLOGY

The tunnels of Samos – 368

HYPERSONIC FLIGHT

Hyper-X Model Testing with Animation – 7

X-43 Composite Tape – 184

HYPERSONIC INLETS

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

HYPERSONIC WIND TUNNELS

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

HYPERVELOCITY GUNS

High velocity gas gun – 317

HYPERVELOCITY IMPACT

Comet impact 1994 animation reel – 383

Comet Shoemaker-Levy Impact: Briefing – 384

Shoemaker-Levy Comet Impact on Jupiter Briefing From JPL – 398

Shoemaker-Levy Comet Impact with Jupiter Press Briefing – 395

HYPOTHETICAL PLANETS

Searching for Planets Around other Stars – 381

ICE FORMATION

Galileo Science Update Europa Unveiled – 88

ICE PREVENTION

Icing research tunnel – 9

WHIPICE – 3

ICE
Plentiful Water Detected in Mars Northern Hemisphere – 405

IGNITION
STS-43 TCDT – 211
STS-77 Flight Day 1 – 73
STS-81 Flight Day 1 – 90
STS-82 Day 01 Highlights – 93
STS-84 Day 01 Highlights – 99
STS-84 Mission Highlights Resource Tape – 103
STS-86 Day 01 Highlights – 107
STS-88 Day 01 Highlights – 126
STS-90 Mission Highlights Resource Tape – 121
STS-94 Mission Highlights Resource Tape – 105
STS-99 Countdown Status Briefing – 173

IMAGE RESOLUTION
Programmable Remapper project – 367

IMAGES
Colliding Galaxies: Hubble Space Telescope – 383
Mars Global Surveyor Images – 401
Mars Global Surveyor MOC Images – 401
Mars Images MOC2-106 through 109 – 401

NASA images 13 – 388

IMAGING RADAR
STS-30: Flight Summary – 187

IMAGING TECHNIQUES
Beyond Earth's Boundaries – 411
Glacier Bay, Alaska, from the Ground, Air, and Space – 349
HST Briefing: HST Science Overview – 381
Medical imaging – 376
PMMW Camera TRP – 344
Refocusing space technology – 377
STS-47 mission highlights resource tape – 53
STS-67 mission highlights resource tape – 47
STS-93 Flight Day 2 Highlights and Crew Activities – 137
STS-93 Flight Day 3 Highlights and Crew Activities – 136
STS-93 Flight Day 4 Highlights and Crew Activities – 137

IMPACT TESTS
STS-34: JPL RTG Safety Tests – 182

IMPROVEMENT
STS-101: Atlantis Orbiter Upgrade Briefing – 193

IMP
The 1971 highlights – 409

IN SITU MEASUREMENT
In-situ monitoring of crystal growth using MEPHISTO – 338

INDEXES (DOCUMENTATION)
The future of bibliographic standards in a networked information environment – 377

INDIAN OCEAN
Shuttle Earth Views, 1994 – 348

INDONESIA
Shuttle Earth Views, 1994 – 348

INDUSTRIAL PLANTS
NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

INDUSTRIES
Finding fish from above – 347
From space to Earth – 377
Quest for excellence 5 – 374

INERTIAL UPPER STAGE
Inertial Upper Stage – 318
STS-26 generic integrated IUS deploy simulation – 26
STS-30 Magellan IUS/EVA training in WETF – 358
STS-43 IUS Lift to Workstand at the VPF – 203
STS-54 IUS Removal from Canister to Test Cell at VPF – 232
STS-93: Crew Interview - Cady Coleman – 157
STS-93: Crew Interview - Steve Hawley – 157

INFESTATION
Assisting wine growers – 355

INFLATABLE SPACECRAFT
STS-77 Flight Day 2 – 75
STS-77 Flight Day 3 – 73
STS-77 Flight Day 5 – 74

INFLATABLE STRUCTURES
STS-77 Flight Day 2 – 75
STS-77 Flight Day 3 – 73
Wind Tunnel Tests of an Inflatable Airplane – 2

IN-FLIGHT SIMULATION
STS-96 Crew Training – 131

INFORMATION MANAGEMENT
NIST: Information management in the AMRF – 376
STI: Managing a universe of information – 376

INFORMATION SYSTEMS
NASA Spacelink computer – 365

INFORMATION TRANSFER
STS-93: Crew Interview - Cady Coleman – 157
STS-93: Crew Interview - Steve Hawley – 157

INFRARED INSTRUMENTS
HST Briefing: HST Science Overview – 381

INFRARED INTERFEROMETERS
STS-99 Crew Interviews: Kevin R. Kregel – 146
STS-99 Crew Interviews: Mamoru Mohri – 146

INFRARED RADAR
STS-99 Crew Interviews: Gorie – 147

INFRARED RADIATION
STS-109/Columbia/HST Pre-Launch Activities/Launch On Orbit-Landing-Crew Egress – 334

INFRARED RADIOMETERS
Testing the waters from space – 347

INGRESS (SPACECRAFT PASSAGEWAY)
TCDT STS-99 Crew at FSS/White Room – 172

INJECTORS
Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 343

INLET FLOW
Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

INORGANIC COATINGS
Restoring Miss Liberty – 337

INSECTS
Combating malaria – 347

INSPECTION
Airline safety and economy – 3
KSC technology: Automated orbiter window inspection system – 43
STS-103 HST Blacklight and Whitelight Inspections – 147
STS-103 Hubble Inspection with Astronauts at Payload Hazardous Servicing Facility (PHSF) – 150
STS-26: O-Ring Installation and Inspection – 140
STS-26: Preparations for Launch – 142
STS-26 SRB LRFT Forward Center Segment Joint Inspection – 139
STS-36 : Turbo Pump Deinstalled and Being Inspected – 346
STS-40: Hinge Inspection – 195
STS-41: Discovery Payload Bay Door Investigation – 195
STS-43 TDRS-E Sharp Edge Inspection at VPF – 219
STS-45 Atlas-1 Compiled Processing Footage – 227
STS-93 CEIT with crew in the OPF-3 – 150
STS-93: CEIT with Crew in the OPF-3 – 159

STS-95: Post Landing and Crew Walkaround of the Orbiter at the Shuttle Landing Facility – 159

INSTALLING

Delta XTE Fairing Installation at Complex 17-B CCAS – 324

International Space Station Video Progress Report – 331

ISS Animation Resource Reel – 331

SOHO Solid Rocket Booster Installation – 336

STS-100 Crew Interview: Chris Hadfield – 245

STS-100 Crew Interview: Jeff Ashby – 243

STS-100 Crew Interview: John Phillips – 243

STS-100 Crew Interview: Kent Rominger – 243

STS-100 Crew Interview: Scott Parazynski – 244

STS-100 Crew Interview: Umberto Guidoni – 243

STS-100 Crew Interview: Yuri Lonchakov – 244

STS-100 Mission Highlights Resource Tape – 257

STS-101: Crew Activity Report / Flight Day 6 – 191

STS-102 Crew Activity Report/Flight Day 4 Highlights – 243

STS-104 Flight Day 7 Highlights – 255

STS-112 Crew Interviews: Yurchikhin – 280

STS-26: O-Ring Installation and Inspection – 140

STS-39 IBSS SPASS II Rotation and Installation – 197

STS-41 Ulysses Compiled Flow Tape – 217

STS-46/Eureca Guidance Installation/Astronaut Inspection – 209

STS-47/Spacelab-J Installation into Payload Bay of Endeavour OPF HB-3 – 209

STS-50 Columbia/EDO Plate Installation – 221

STS-59 Endeavour Space Radar Lab I Antenna Installed on Pallet – 231

STS-92 Mission Highlights Resource Tape – 259

STS-93: Crew Watch the Installation of Chandra's Solar Panel in the VPF – 156

STS-97 Crew Activity Report/Flight Day 4 Highlights – 213

STS-98 Crew Activity Report/Flight Day 4 Highlights – 238

STS-98 Crew Activity Report/Flight Day 6 Highlights – 240

XTE Solid Motor Installation at Pad 17-A, Cape Canaveral Air Station – 336

INSTRUCTORS

NEWEST 1990 no. 4007 – 372

Taecannautics: Sharing the dream – 370

Teacher in space – 358

INSULIN

New insulin pump – 356

INTEGRATED MISSION CONTROL CENTER

STS-47/Vice President Dan Quayle's Visit to KSC for Launch – 211

INTEGRATED TRUSS STRUCTURE S1

STS-112 Crew Interviews - Wolf – 288

STS-112 Crew Interviews: Ashby – 279

STS-112 Crew Interviews: Melroy – 285

STS-112 Crew Interviews: Yurchikhin – 280

STS-112 Flight Day 2 Highlights – 298

STS-112 Flight Day 4 Highlights – 290

STS-112 Flight Day 7 Highlights – 297

STS-112 Flight Day 8 Highlights – 297

STS-112 Mission Highlights Resource, Part 3 of 3 – 310

STS-112 Mission Highlights Resource Tape Part 2 of 3 – 310

STS-112/Atlantis/ISS 9A Pre-Launch - Launch On-Orbit - Landing - Crew Egress – 311

INTELSAT SATELLITES

Endeavor: Now and then – 46

Houston, I think we've got a satellite – 320

INTELSAT V-A (F-10) Launch – 35

STS-49 Endeavour/Breakfast/Suit-up/Depart O&C/Launch/On-Orbit/Landing with ISOS – 218

STS-49 Endeavour/Intelsat Briefing – 225

The 1970 highlights – 409

INTERACTING GALAXIES

Quasar Host Galaxies/Neptune Rotation/Galaxy Building Blocks/Hubble Deep Field/Saturn Storm – 386

INTERNATIONAL COOPERATION

International food research project – 361

Meteor 3/TOMS launch of 15 August 1991 in Plesetsk, USSR – 31

Mir 18 post flight presentation – 321

An announcement by Dan Goldin – 375

MANEUVERABLE SPACECRAFT
STS-76 Flight Day 8 – 72

MANEUVERS
STS-79 Flight Day 6 – 81
STS-88 Day 03 Highlights – 125

MANIPULATORS
STS-85 Day 02 Highlights – 105
STS-85 Day 07 Highlights – 105
STS-85 Day 09 Highlights – 104
STS-85 Day 11 Highlights – 103

MANNED MANEUVERING UNITS
Skylab: The second manned mission. A scientific harvest – 14
STS-88 Day 02 Highlights – 126

MANNED MARS MISSIONS
Lunar/Mars exploration for synthesis group – 394
Space exploration initiative – 11

MANNED ORBITAL LABORATORIES
Expedition 5 Crew Interviews: Peggy Whitson – 280
Expedition 5 Crew Interviews: Valery Korzun, Commander – 282

MANNED SPACE FLIGHT NETWORK
Apollo 11: The Goddard connection – 12

MANNED SPACE FLIGHT
Cohen program management briefing – 374
History of the manned space flight program – 410
Legacy of Gemini – 14
President Kennedy's speech at Rice University – 408
Return to space – 42
Skylab: The second manned mission. A scientific harvest – 14
STS 110 Mission Highlights Resource Tape – 283
STS-103 Crew Activity Report/Flight Day 1 Highlights – 141
STS-106 Crew Activities Report/Flight Day 04 Highlights – 201
STS-106 Crew Activity Report/Flight Day 1 Highlights – 201
STS-107 Flight Day 14 Highlights – 307
STS-110 Flight Day 10 Highlights – 300
STS-110 Flight Day 3 Highlights – 299
STS-110 Flight Day 5 Highlights – 281
STS-112 Flight Day 11 Highlights – 285
STS-41 Ulysses Breakfast, Suit-up, C-7 Exit, Launch and ISOS Cam Views – 200
STS-74 Post Flight Presentation – 66
STS-80 Post Flight Presentation – 86
STS-86 Post Flight Presentation – 131
STS-88 Day 05 Highlights – 125
STS-88 Day 06 Highlights – 124
STS-88 Day 07 Highlights – 124
STS-88 Mission Highlights Resources Tape – 130
STS-91 Post Flight Presentation – 131
STS-93 Mission Highlights Resource Tape – 140
STS-95 Post Flight Presentation – 127
STS-96 FD Highlights and Crew Activities Report: Flight Day 01 – 133
STS-96 FD Highlights and Crew Activities Report: Flight Day 03 – 132
STS-96 FD Highlights and Crew Activities Report: Flight Day 06 – 133
STS-96 FD Highlights and Crew Activities Report: Flight Day 07 – 133
STS-96 FD Highlights and Crew Activities Report: Flight Day 08 – 133
STS-96 FD Highlights and Crew Activities Report: Flight Day 09 – 134
STS-96 FD Highlights and Crew Activities Report: Flight Day 10 – 134
STS-96 Post Flight Presentation – 137
USA/Russia space cooperation documentary – 320

MANNED SPACECRAFT
Apollo 11: For all mankind – 15
Apollo 12: Pinpoint for science – 15
Apollo 14 mission to Fra Mauro – 394
STS-93 Flight Day 1 Highlights and Crew Activities – 136
STS-93 Flight Day 2 Highlights and Crew Activities – 137
STS-93 Flight Day 3 Highlights and Crew Activities – 136
STS-93 Flight Day 4 Highlights and Crew Activities – 137
STS-93 Flight Day 5 Highlights and Crew Activities – 137

MANUAL CONTROL
Unistick vehicle controller – 345

MANUFACTURING
Galileo probe spacecraft mission to Jupiter – 389
STS-78 Flight Day 5 – 80

MAPPING
Improved mapping system – 347
STS-99 Flight Day Highlights 03 and Crew Activities Report – 164

MARINE ENVIRONMENTS
STS-29 crew bailout in WETF – 361

MARINE METEOROLOGY
Live from Antarctica: The coldest, windiest place on Earth – 353
Live from Antarctica, volume 4 – 353

MARINE RESOURCES
The 1970 highlights – 409

MARINER 10 SPACE PROBE
Mercury: Exploration of a planet – 393

MARINER PROGRAM
NASA images 9 no. 3005 – 13

MARINER SPACECRAFT
The 1971 highlights – 409

MARINER-MERCURY 1973
The 1973 highlights – 408

MARS 4 SPACECRAFT
The 1982 highlights – 409

MARS ATMOSPHERE
1998 Mars Missions Science Briefing – 16

MARS CLIMATE ORBITER
Mars Climate Orbiter – 322

MARS ENVIRONMENT
1998 Mars Missions Science Briefing – 16
Mars Climate Orbiter – 322

STS-78 Flight Day 10 – 78

NEAR EARTH ASTEROID RENDEZVOUS MISSION

Delta Near Launch Activities, Launch Complex 17B, Cape Canaveral Air Station – 328

Delta/NEAR Launch – 33

NEAR FIELDS

EM-ANIMATE: A computer program for displaying and animating electromagnetic near-field and surface-current solutions: Video supplement to NASA Technical Memorandum 4539 – 366

NEBULAE

Best of Hubble Space Telescope – 380

Hubble's Panoramic Portrait of a Vast Star-Forming Region – 382

The Trifid Nebula: Stellar Sibling Rivalry – 386

NEPTUNE ATMOSPHERE

Voyager's last encounter – 389

NEPTUNE (PLANET)

NASA report to education, volume 7 – 388

Neptune encounter highlights – 387

Quasar Host Galaxies/Neptune Rotation/Galaxy Building Blocks/Hubble Deep Field/Saturn Storm – 386

Voyager 2: Neptune encounter – 388

Voyager Briefing: Expectations of the Neptune Encounter – 398

Voyager II Encounter with Neptune: Voyager/Neptune Briefing – 396

Voyager last picture show – 390

Voyager Outreach Compilation – 394

Voyager's last encounter – 389

NEPTUNE SATELLITES

Voyager II Encounter with Neptune: Voyager/Neptune Briefing – 396

Voyager's last encounter – 389

NERVOUS SYSTEM

STS-90 Day 14 Highlights – 119

NEURAL NETS

The vision machines – 366

NEUROLOGY

STS-78 Flight Day 2 – 79

NEUROPHYSIOLOGY

STS-90 Day 14 Highlights – 119

NEUTRAL BUOYANCY SIMULATION

Expedition 7 Crew Training Clip – 30

NEWS MEDIA

COBE video news – 340

STS-44 mission highlights resource tape. Part 2 of 2 – 54

STS-72 Mission Update Flight Day 8 – 107

STS-72 Mission Update Flight Day 9 – 107

STS-73 flight day 8 – 59

STS-76 Flight Day 5 – 68

STS-76 Flight Day 7 – 69

STS-89 Day 06 Highlights – 115

NEWTON

Newton in space – 369

NIGHT FLIGHTS (AIRCRAFT)

Challenger's night flight – 15

STS 63: Post flight presentation – 45

NIGHT

STS-95: Discovery Flight Crew Arrives at the Shuttle Landing Facility for TCDT – 160

NIMBUS 7 SATELLITE

Coastal zone color scanner: Nimbus 7 – 354

NITROGEN COMPOUNDS

The atmosphere below – 352

NOISE GENERATORS

Pressure Wave Propagation in a Screech Cycle – 95

NOISE INTENSITY

Acoustic climb to cruise test – 7

NOISE POLLUTION

Flying on the ground – 369

NOISE REDUCTION

Pressure Wave Propagation in a Screech Cycle – 95

The 1968 highlights – 409

The 1971 highlights – 409

NORTH DAKOTA

What is the Value of Space Exploration? - A Prairie Perspective – 349

NORTHERN HEMISPHERE

Plentiful Water Detected in Mars Northern Hemisphere – 405

Southern and Northern Hemisphere total ozone as seen by TOMS – 352

NOZZLE FLOW

Pressure Wave Propagation in a Screech Cycle – 95

NUCLEAR ELECTRIC POWER GENERATION

Aerospace test facilities at NASA LERC Plumbrook – 28

NUCLEAR PROPULSION

One fantastic ride – 335

NUMERICAL FLOW VISUALIZATION

Rotor stator CGI – 7

The 1988 computational fluid dynamics highlights – 341

The 1989 computational fluid dynamics highlights – 341

NUTRITION

International food research project – 361

O RING SEALS

STS-26: O-Ring Installation and Inspection – 140

OAO

The 1968 highlights – 409

OBLIQUE WINGS

The 1980 highlights – 410

OBSERVATORIES

Lunar ranging – 379

Unmasking the Sun – 405

OCEAN CURRENTS

TOPEX Press Conference (2 of 2) – 330

OCEAN SURFACE

Testing the waters from space – 347

OCEANOGRAPHY

Short walk to everywhere – 370

TOPEX Press Conference (2 of 2) – 330

OCEANS

Coastal zone color scanner: Nimbus 7 – 354

OGO

The 1966 highlights – 408

The 1968 highlights – 409

ONBOARD EQUIPMENT

SAMS (space acceleration measurement system) – 334

STS-29 crew IMAX camera training – 343

STS-96 Crew Interview: Kent Rominger – 149

STS-99 CEIT at the OPF High Bay-2, Endeavour, SRTM Mission – 174

OORT CLOUD

Asteroids and Comets Outreach Compilation – 383

OPTOMETRY

Enhancing sight – 370

ORBIT INSERTION

Inertial Upper Stage – 318

Mars Observer Lecture: Mars Orbit Insertion – 403

Mars Observer Orbit Insertion Briefing – 24

Mars Observer Press Conference JPL – 403

STS-93: Columbia / Chandra Mission Overview (from JSC) – 160

ORBITAL ASSEMBLY

Designing Space Station – 319

Hey! What's Space Station Freedom? – 321

International Space Station General Resource Reel – 331

ISS General Resource Reel – 331

Shuttle-C, the future is now – 42

STS 110 Mission Highlights Resource Tape – 282

STS-100 Photo-op/Shut-up/Depart O&C/Launch Endeavour On Orbit/Landing/Crew Egress – 310

STS-101 Mission Highlights Resource Tape, Part 2 of 3 – 226

STS-106 Crew Activities Report/Flight Day 9 Highlights – 211

STS-110 Flight Day 4 Highlights – 294

STS-110 Flight Day 6 Highlights – 284

STS-110 Flight Day 7 Highlights – 285

STS-110 Post Flight Presentation – 294

STS-110/Atlantic/ISS 8A Pre-Launch On Orbit-Landing-Crew Egress – 312

STS-111 Crew Interviews: Ken Cockrell, Commander – 292

STS-111 Flight Day 5 Highlights – 289

STS-111 Flight Day 7 Highlights – 293

STS-111 Mission Highlights Resource Tape – 300

STS-112 Flight Day 4 Highlights – 290

STS-112 Flight Day 6 Highlights – 295

STS-112 Flight Day 7 Highlights – 297

STS-112 Flight Day 8 Highlights – 297

STS-112/Atlantis/ISS 9A Pre-Launch - Launch On-Orbit - Landing - Crew Egress – 311

STS-113 Flight Day 6 Highlights – 302

STS-113 Mission Highlights Resource Tape Flight Days 4-6 Tape: 2 of 4 – 313

STS-113/Endeavour/ISS 11A Pre-Launch - Launch On Orbit - Landing - Crew Egress – 312

STS-88 Day 09 Highlights – 126

ORBITAL LAUNCHING

STS-26 through STS-34, deploy activities – 407

ORBITAL MANEUVERING VEHICLES

Shuttle-C, the future is now – 42

ORBITAL MANEUVERS

Mars Observer Lecture: Mars Orbit Insertion – 403

STS 110 Mission Highlights Resource Tape – 284

STS-103 Crew Activity Report/Flight Day 8 Highlights – 146

STS-113 Flight Day 3 Highlights – 301

STS-39: OMS Pod Thruster Removal/Replace – 196

STS-74 flight day 4 – 63

STS-89 Day 02 Highlights – 114

STS-89 Day 04 Highlights – 114

STS-93: Columbia / Chandra Mission Overview (from JSC) – 160

Ulysses: A solar odyssey – 12

ORBITAL MECHANICS

Space flight: The application of orbital mechanics – 24

STS-84 Day 08 Highlights – 98

STS-89 Day 04 Highlights – 114

STS-93: Columbia / Chandra Mission Overview (from JSC) – 160

ORBITAL RENDEZVOUS

STS-100 Crew Interview: Chris Hadfield – 245

STS-100 Crew Interview: Jeff Ashby – 243

STS-100 Crew Interview: John Phillips – 243

STS-100 Crew Interview: Kent Rominger – 243

STS-100 Crew Interview: Scott Parazynski – 244

STS-100 Crew Interview: Umberto Guidoni – 243

STS-100 Crew Interview: Yuri Lonchakov – 244

STS-100 Mission Highlights Resource Tape – 258

STS-100 Post Flight Presentation – 253

STS-101: CAR / Flight Day 03 Highlights – 190

STS-101: Crew Interview - Jim Halsell – 189

STS-102 Mission Highlight Resource Tape, Tape 1 of 4 – 252

STS-102 Post Flight Presentation – 254

STS-103 Flight Day 3 Highlights and Crew Activities Report – 143

STS-104 Mission Highlights Resource Tape – 268

STS-106 Crew Activities Report/Flight Day 3 Highlights – 201

STS-106 Mission Highlights Resource Tape – 249

STS-108 Mission Highlights Resource Tape – 278

STS-108 Post Flight Presentation – 272

STS-109 Crew Interviews - Currie – 271

STS-109 Crew Interviews: James H. Newman – 270

STS-109 Crew Interviews: Michael J. Massimino – 270

STS-109 Mission Highlights Resource Tape – 297

STS-112 Flight Day 3 Highlights – 299

STS-113 Flight Day 3 Highlights – 301

STS-32 mission highlights resource tape – 10

STS-71 mission highlights resource tape – 57

STS-74 Mission Highlights Resource Tape – 74

STS-74 Post Flight Presentation – 66

STS-79 Flight Day 4 – 81

STS-88 Day 03 Highlights – 125

STS-89 Day 02 Highlights – 114

STS-89 Day 05 Highlights – 114

STS-89 Day 06 Highlights – 115

STS-89 Post Flight Presentation – 115

STS-98 Post Flight Presentation – 253

ORBITAL SERVICING

STS-103 Discovery: Hubble Servicing Mission Press Showing PHSF – 148

STS-103 Flight Day 3 Highlights and Crew Activities Report – 143

STS-103 Flight Day 5 Highlights and Crew Activities Report – 145

STS-105 Flight Day 7 Highlights – 261

STS-105 Mission Highlights Resource Tape: Flight Days 7-9 – 275

STS-109 Mission Highlights Resource Tape – 296

STS-37 CETA evaluation with Ross – 360

STS-87 Day 03 Highlights – 110

STS-89 Post Flight Presentation – 115

ORBITAL SPACE TESTS

STS-103 Crew Activity Report/Flight Day 8 Highlights – 146

ORBITAL WORKERS

STS-103 Flight Day 5 Highlights and Crew Activities Report – 145

ORBITAL WORKSHOPS

STS-88 Crew Interview: Jim Newman – 129

ORGANISMS

Live from Antarctica: The coldest, windiest place on Earth – 353

ORGANIZATIONS

PET team – 374

ORIENTATION

Challenger Center: Orientation – 371

ORION NEBULA

Orion Nebula Movie – 385

OSCILLATING FLOW

Pressure Wave Propagation in a Screech Cycle – 95

OSCILLATIONS

Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230 – 353

OSO

The 1971 highlights – 409

OZONE DEPLETION

Airborne Arctic stratospheric expedition: Ozone – 4

Arctic ozone – 350

Atlas of TOMS ozone, 1978-1988 – 350

Evolution of the Southern Hemisphere ozone hole as seen by TOMS from August 1979 to December 1991 – 351

Live from Antarctica, volume 4 – 353

Meteor 3/TOMS launch of 15 August 1991 in Plesetsk, USSR – 31

Ozone hole airborne Arctic stratospheric expedition (pre-flight) – 351

Ozone hole – 351

The atmosphere below – 352

OZONE

Arctic ozone expedition – 349

Atlas of TOMS ozone, 1978-1988 – 350

October 1979-1989 Southern Hemisphere total ozone as seen by TOMS – 351

Southern and Northern Hemisphere total ozone as seen by TOMS – 352

The atmosphere below – 352

OZONOMETRY

Ozone hole airborne Arctic stratospheric expedition (pre-flight) – 351

OZONOSPHERE

Atlas of TOMS ozone, 1978-1988 – 350

The atmosphere below – 352

PACIFIC OCEAN

Shuttle Earth Views, 1994 – 348

PALEOBIOLOGY

Dino Fest – 355

PALEONTOLOGY

Dino Fest – 355

PANELS

Delta XTE Spacecraft Solar Panel Deployment, Hangar AO at Cape Canaveral Air Station – 325

STS-41: Discovery Payload Bay Door Investigation – 195

STS-93: Crew Watch the Installation of Chandra's Solar Panel in the VPF – 156

PARACHUTE DESCENT

1990 ASCAN ground egress/parasail – 362

ASCAN Training: Egress and Parasail Training – 364

Galileo probe ready to go – 388

Mars Pathfinder B-roll – 392

PARACHUTES

Adamson, Jim – 363

Galileo probe ready to go – 388

PARASITES

Assisting wine growers – 355

PARASITIC DISEASES

Combating malaria – 347

PASSENGERS

Crash impact survival in light planes – 3

PATHOLOGICAL EFFECTS

All systems go! – 46

PAYLOAD ASSIST MODULE

STS-51A: Mission Highlights – 139

STS-87 Day 03 Highlights – 110

PAYLOAD DELIVERY (STS)
Inertial Upper Stage – 318
STS-31 Mission Highlights Resource Tape – 179
STS-41 Ulysses Launch (10/06/90), Ulysses Deploy (10/06/90), Landing (10/10/90) – 199
STS-70 flight: Day 1 – 51
STS-72 Post Flight Presentation – 66
STS-75 Flight Day 1 – 65
STS-75 Flight Day 4 – 65
STS-85 Mission Highlights Resources Tape – 113
STS-86 Day 04 Highlights – 108
STS-86 Day 06 Highlights – 109
STS-87 Day 01 Highlights – 111
STS-87 Day 08 Highlights – 110
STS-89 Day 07 Highlights – 115
STS-89 Post Flight Presentation – 115
STS-90 Day 05 Highlights – 121
STS-90 Day 06 Highlights – 121
STS-90 Day 11 Highlights – 121
STS-93: Columbia / Chandra Mission Overview (from JSC) – 160

PAYLOAD DEPLOYMENT & RETRIEVAL SYSTEM
STS 63: Post flight presentation – 45
STS Flight 64 mission highlights – 45
STS-46 post flight press conference – 62
STS-67 post flight presentation – 47
STS-69 flight day 9 highlights – 56
STS-69 postflight presentation – 57
STS-70 mission highlights – 56
Tethered satellite: Forces and motion – 320

PAYLOAD INTEGRATION PLAN
STS-86 Day 10 Highlights – 109
STS-87 Day 08 Highlights – 110

PAYLOAD INTEGRATION
STS-93: Columbia / Chandra Mission Overview (from JSC) – 160
STS-96: SPACEHAB Double MOD into PGHM at Launch Complex 39B – 160

PAYLOAD RETRIEVAL (STS)
Endeavor: Now and then – 46
STS-103 Flight Day 3 Highlights and Crew Activities Report – 143
STS-32 LDEF approach in SES – 39
STS-32 LDEF EVA training in WETF with Low and Dunbar – 361
STS-32 onboard 16mm photography quick release – 39
STS-69 flight day 4 highlights – 55
STS-69 flight day 8 highlights – 56
STS-72 Flight Day 1 – 70
STS-72 Flight Day 3 – 70
STS-72 Flight Day 6 – 106
STS-72 Post Flight Presentation – 66
STS-75 Flight Day 1 – 65
STS-81 Post Flight Presentation – 127
STS-85 Mission Highlights Resources Tape – 113
STS-86 Day 05 Highlights – 108
STS-87 Day 01 Highlights – 111
STS-89 Day 05 Highlights – 114
STS-89 Day 07 Highlights – 115
STS-89 Post Flight Presentation – 115
STS-95 Mission Highlights Resources Tape – 130

PAYLOAD STATIONS
STS-30 onboard 16mm photography quick release – 40

PAYLOAD TRANSFER
STS-109 Mission Highlights Resource Tape – 296
STS-111 Flight Day 10 Highlights Replay – 285
STS-111 Flight Day 4 Highlights Replay – 284
STS-111 Flight Day 5 Highlights – 289
STS-111 Mission Highlights Resource Tape – 300
STS-40/SLS-1: Move from Work Stand to Canister – 199
STS-89 Day 05 Highlights – 114

PAYLOADS
Delta II/Geotail Launch with Pre-Launch Activities – 31
Delta/Wind Launch – 193
Fuse Lift to Payload Adapting Fixture (PAF) at Hangar A& – 158
Meteor 3/TOMS launch of 15 August 1991 in Plesetsk, USSR – 31
Rotating unbalanced mass proof-of-concept – 370
SOHO Payload Mate to Atlas/Centaur at the SAEF 2 – 325
Starfire I/ Consort III Launch – 329
STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311
STS-102 Countdown Status – 245
STS-102 Crew Activity Report/Flight Day 5 Highlights – 241
STS-104 Countdown Status Briefing – 263
STS-105 Countdown Status Briefing – 262
STS-106 Countdown Status Briefing – 231
STS-109 Crew Interview: Grunsfeld – 272
STS-111 Crew Interviews: Paul Lockhart, Pilot – 294
STS-111 Expedition Five Crew Training Clip – 293
STS-26: Preparations for Launch – 142
STS-31: Hubble Discovery Payload Doors Closing – 181
STS-34: Galileo Payload Canister Doors Closing in VPF – 186
STS-35 EVA payload training in WETF – 359
STS-37 Payload Gamma Ray Observatory Pad-B in PCR – 168
STS-39 Activities in Orbiter Bay – 223
STS-48 UARS at PHSF – 234
STS-54 Diffuse X-Ray Spectrometer – 232
STS-55 Crew Briefing, Part 1 of 2 – 222
STS-56 Atlas-2/Spartan O&C and Hangar AO – 219
STS-68 mission highlights resource tape – 14
STS-77 Flight Day 4 – 75
STS-78 Flight Day 8 – 80
STS-79 Flight Day 2 – 83
STS-80 Flight Day 8 – 89
STS-84 Day 01 Highlights – 99
STS-84 Day 05 Highlights – 97
STS-84 Day 06 Highlights – 97
STS-84 Day 07 Highlights – 98
STS-84 Post Flight Presentation – 97
STS-85 Day 10 Highlights – 103
STS-87 Mission Highlights Resources Tape – 128
STS-92 Crew News Conference – 223
STS-92 Mission Overview – 223
STS-92 Preflight Briefings Video Feed and International Space Station Overview – 222
STS-93 Flight Day 2 Highlights and Crew Activities – 137
STS-94 Day 02 Highlights – 99
STS-94 Day 03 Highlights – 100
STS-94 Day 04 Highlights – 100
STS-94 Day 05 Highlights – 100
STS-94 Day 06 Highlights – 100
STS-94 Day 07 Highlights – 102
STS-94 Day 09 Highlights – 101
STS-95 Post Flight Presentation – 127
STS-97 Crew Activity Report/Flight Day 2 Highlights – 214
STS-98 Crew Interview: Bob Curbeam – 224
STS-98 Crew Interview: Ken Cockrell – 224

STS-98 Crew Interview: Mark Polansky – 226

STS-98 Crew Interview: Marsha Ivins – 224

STS-98 Crew Interview: Tom Jones – 224

STS-99 Atlantis, Shuttle Radar Topography Mission (SRTM) in the MPPF with Technicians working – 167

STS-99 Payload Bay Door Opening at Pad 39A Endeavour – 168

STS-99 Payload Door Closure in Orbiter Processing Facility #2 Endeavour (SRTM) – 150

Titan III Mars Explorer Transfer Orbital Stage Delivery to the PHSF – 402

Titan III Mars Observer Arrival and Uncrating at PHSF – 403

Titan III Mars Observer Press Showing at the PHSF – 404

Toys in space, 2 – 45

WIND Mated to Delta – 326

PEGASUS AIR-LAUNCHED BOOSTER

Hyper-X Model Testing with Animation – 7

NASA report to education, volume 7 – 388

Pegasus Departs from KSC – 329

X-34 Captive Carry & Seunghee Lee Interview – 183

PERFORMANCE TESTS

STS-34: JPL RTG Safety Tests – 182

Technology test bed – 9

PERSONNEL DEVELOPMENT

PET team – 374

PERSONNEL MANAGEMENT

An announcement by Dan Goldin – 375

PERSONNEL SELECTION

Astronauts number 1 – 358

PERSONNEL

Return to flight 3, the journey continues – 374

STS-47/Vice President Dan Quayle's Visit to KSC for Launch – 211

PHOTOGRAPHIC EQUIPMENT

STS-27 crew photo training and habitation procedures – 343

STS-30 crew photo in building 4 – 342

STS-35 payload specialists Durrance and Parise: 70mm photo training and cabin familiarization – 343

PHOTOGRAPHIC FILM

Space basic – 378

PHOTOGRAPHS

STS-83 Postflight Presentation – 94

PHOTOGRAPHY

National Aero-Space Plane resource reel – 4

National Aero-Space Plane – 4

STS-27 crew photo training and habitation procedures – 343

STS-34 onboard 16mm photography quick release – 38

STS-41 crew training bailout in CCT, 16mm camera class EVA prep, habitation equipment procedures, and food tasting – 28

PHOTOVOLTAIC CONVERSION

Futurepath 1 – 335

PHYSICAL EXERCISE

GSFC Fun Run – 356

Living well in space: Ensuring crew capability – 357

Lockheed Stabilizer System for space exercise equipment – 364

STS-27 crew presentation clip – 40

STS-72 Mission Highlights Resource Tape – 72

STS-78 Flight Day 3 – 76

STS-78 Flight Day 4 – 78

STS-81 Flight Day 7 – 85

STS-90 Day 10 Highlights – 120

PHYSICAL FITNESS

Living well in space: Ensuring crew capability – 357

PHYSICS

ZENO: A critical fluid light scattering experiment – 341

PHYSIOLOGICAL EFFECTS

Living well in space: Ensuring crew capability – 357

Starfire I/ Consort III Launch – 329

PHYSIOLOGICAL RESPONSES

All systems go! – 46

PHYSIOLOGICAL TESTS

STS-32 crew training for lower body negative pressure unit and AFE – 357

STS-43 post flight press conference – 52

STS-47 mission highlights resource tape – 53

STS-48 post flight press conference – 53

STS-67 post flight presentation – 47

STS-70 mission highlights – 56

STS-70 post flight presentation – 52

STS-75 Flight Day 14 – 71

PILOT SUPPORT SYSTEMS

STS-101: Atlantis Orbiter Upgrade Briefing – 193

PILOTLESS AIRCRAFT

AC 67 Launch Video – 34

PILOTS (PERSONNEL)

STS-97 Crew Interviews: Michael J. Bloomfield – 212

PIONEER PROJECT

NASA images 11 – 387

NASA images 9 no. 3005 – 13

PIONEER SPACE PROBES

The 1968 highlights – 409

The 1978 highlights – 408

The 1982 highlights – 409

PIONEER VENUS SPACECRAFT

Pioneer-Venus press clip – 383

PLANETARY CRATERS

Magellan collection of radar calibration results – 391

PLANETARY EVOLUTION

Pioneer-Venus press clip – 383

Searching for Planets Around other Stars – 381

Spinning Stardust into Planets – 386

Worlds Smaller than Saturn – 405

PLANETARY GEOLOGY

Collection of Magellan Venus radar mapping results – 393

Exploring Mars – 387

Magellan, Galileo, and Ulysses – 389

PLANETARY IONOSPHERES

Galileo Mission Science Briefing – 399

PLANETARY MAGNETIC FIELDS

Mars observer mission: Mapping the Martian world – 393

PLANETARY MAPPING

Collection of Magellan Venus radar mapping results – 393

Mars: Five views on what is known – 389

Mars observer mission: Mapping the Martian world – 393

Sines and cosines. Part 2 of 3 – 368

PLANETARY MASS

Searching for Planets Around other Stars – 381

PLANETARY NEBULAE

Final Blaze of Glory – 405

PLANETARY RINGS

Voyager's last encounter – 389

PLANETARY ROTATION

Neptune encounter highlights – 387

PLANETARY SYSTEMS

Searching for Planets Around other Stars – 381

PLANETS

Spinning Stardust into Planets – 386

Welcome to Outer Space – 16

PLANTS (BOTANY)

Plant research – 355

PLASMA INTERACTIONS

SAMPIE (Solar Array Module Plasma Interactions Experiment) – 349

PLASMAS (PHYSICS)

Delta WIND Mission Science Briefing – 18

PLATES (TECTONICS)

Galileo Science Update Europa Unveiled – 88

Live from Antarctica, volume 4 – 353

PLAYBACKS

STS-30: TGS Isolated Video Playbacks – 187

STS-51 Main Engine Shutdown Playbacks from OTV – 225

PLUTO ATMOSPHERE

NASA Today - Mars Observer Segment (Part 4 of 6) – 404

PLUTO (PLANET)

NASA Today - Mars Observer Segment (Part 4 of 6) – 404

PODS (EXTERNAL STORES)

STS-39: OMS Pod Thruster Removal/Replace – 196

POINTING CONTROL SYSTEMS

Rotating unbalanced mass proof-of-concept – 370

POLAR METEOROLOGY

Arctic ozone expedition – 349

POLAR ORBITS

Ulysses: A solar odyssey – 12

POLAR REGIONS

STS-41 Ulysses: Ulysses - The Movie – 198

POLARIMETERS

STS-67 post flight presentation – 47

POLYGONS

Similarity – 368

POLYNOMIALS

Polynomials – 368

PORTABLE EQUIPMENT

STS-96 Crew Interview: Kent Rominger – 149

STS-96 FD Highlights and Crew Activities Report: Flight Day 06 – 133

POSEIDON SATELLITE

TOPEX Press Conference (2 of 2) – 330

TOPEX/POSEIDON Launch from Guiana Space Center Aboard an Ariane 42P – 329

POSTFLIGHT ANALYSIS

Apollo 11 Facts [Post Flight Press Conference] – 21

Apollo 13 Facts [Post Flight Press Conference] – 23

STS-104 Flight Crew Post-Landing Press Conference – 263

STS-105 Post-Landing Crew Press Conference – 264

STS-110 Flight Day 8 Highlights – 286

STS-110 Post Flight Presentation – 294

STS-111 Post Flight Presentation – 295

STS-30 Post Flight Press Conference – 177

STS-31: Post Flight Press Conference (Tape 2 of 2) – 188

STS-38: Post Landing News Conference – 196

STS-45/Atlas-1 Post-Landing Science Briefing from MSFC – 209

STS-46 post flight press conference – 62

STS-56 Post Landing Press Conference – 224

STS-61 mission highlights resource tape – 44

STS-68 post flight presentation – 44

STS-75 Post Flight Presentation – 64

STS-84 Post Flight Presentation – 97

POSTLAUNCH REPORTS

STS-102 Flight Crew Post-Landing Press Conference – 246

STS-104 Post-Launch News Conference – 263

STS-105 Post-Launch Press Conference – 264

STS-112 Flight Day 1 Highlights – 298

STS-35: Post Launch News Conference – 182

STS-44 Post Launch Press Conference – 226

STS-45 Post Launch Press Conference – 223

STS-46 Special Events Resource Tape, Part 1 of 2 – 225

STS-46 Special Events Resource Tape, Part 2 of 2 – 223

STS-47 Post-Launch News Conference – 205

STS-51 ACTS/TOS Payload Briefing – 206

STS-52 Post Launch Press Conference – 228

STS-55 Post Launch Press Conference – 224

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

NIST: Information management in the AMRF – 376

Stock footage of Goddard Space Flight Center and Headquarters – 26

STS-114 Crew Interview: James M. Kelly, PLT – 307

The Space Shuttle: America's team reaching for the future – 51

The world's largest wind tunnel – 9

The world's most powerful computer – 366

RESEARCH PROJECTS

Aerospace test facilities at NASA LERC Plumbrook – 28

Chemical engineering: Measurements for a competitive age – 336

Dryden summer 1994 update – 411

Hernandez Engineering: NASA – 321

Langley's 50th year – 410

NACA/NASA: X-1 through X-31 – 1

NASA: The state of the agency – 375

Shaping tomorrow – 373

RESEARCH VEHICLES

F-18 high alpha research vehicle resource tape – 6

FIDO - Video File – 369

X-34 Captive Carry & Seunghee Lee Interview – 183

X-38 Phase 3 Drops V-132 FF#3 – 183

RESEARCH

Dryden and transonic research – 1

RESOURCES MANAGEMENT

EOCAP: Commercial Earth observations program – 348

RESTORATION

Restoring Miss Liberty – 337

RETRIEVAL

EVA retriever demonstration – 345

RETURN TO EARTH SPACE FLIGHT

Delta II Stardust Pre-Launch Press – 31

Mars Climate Orbiter – 322

STS-96 FD Highlights and Crew Activities Report: Flight Day 09 – 134

STS-96 FD Highlights and Crew Activities Report: Flight Day 10 – 134

REUSABLE LAUNCH VEHICLES

X-33, X-34, X-37 Press Conference (Tape 2) – 184

REVIEWING

STS-96 Discovery, Bench Review and SPACEHAB Familiarization at SPACEHAB – 161

REVISIONS

STS-101: Atlantis Orbiter Upgrade Briefing – 193

RIBLETS

Riblets: New speed technology – 341

RIGID STRUCTURES

STS-99 Crew Activities Report / Flight Day 11 Highlights – 166

RISK

STS-80 Flight Day 13 – 87

RIVER BASINS

Beyond Earth's Boundaries – 411

RIVERS

Beyond Earth's Boundaries – 411

ROBOT ARMS

Crew Interviews: Treschev – 287

Expedition 6 Crew Interviews: Ken Bowersox CDR – 286

Robotics Demo Peer Group review – 346

STS-100 Crew Activity Report: Flight Day 2 Highlights – 248

STS-100 Crew Activity Report: Flight Day 4 Highlights – 251

STS-100 Crew Activity Report: Flight Day 5 Highlights – 248

STS-100 Crew Activity Report: Flight Day 8 Highlights – 248

STS-100 Crew Interview: Chris Hadfield – 245

STS-100 Crew Interview: Jeff Ashby – 243

STS-100 Crew Interview: John Phillips – 243

STS-100 Crew Interview: Kent Rominger – 243

STS-100 Crew Interview: Scott Parazynski – 244

STS-100 Crew Interview: Umberto Guidoni – 243

STS-100 Crew Interview: Yuri Lonchakov – 244

STS-100 Flight Day 10 Highlights – 250

STS-100 Mission Highlights Resource Tape – 257

STS-100 Post Flight Presentation – 253

STS-101 Crew Activity Report Flight Day 02 Highlights – 189

STS-102 Mission Highlight Resource Tape, Tape 2 of 4 – 252

STS-104 Flight Day 2 Highlights – 254

STS-109 Crew Interviews - Currie – 271

STS-109 Flight Day 2 Highlights – 273

STS-109 Flight Day 3 Highlights – 272

STS-110 Crew Interviews: Ellen Ochoa – 276

STS-110 Flight Day 2 Highlights – 293

STS-111 Flight Day 09 Highlights – 279

STS-111 Mission Highlights Resource Tape – 300

STS-112 Flight Day 2 Highlights – 298

STS-80 Flight Day 8 – 89

STS-85 Day 04 Highlights – 106

STS-85 Day 05 Highlights – 103

STS-85 Day 11 Highlights – 103

STS-91 Day 05 Highlights – 117

ROBOT CONTROL

Goddard Space Flight Center robotics demo – 344

ROBOT SENSORS

Programmable Remapper project – 367

ROBOTICS

Dante's volcano – 352

FIDO - Video File – 369

Future of robotics – 345

Goddard Space Flight Center robotics demo – 344

NASA report to education, volume 6 – 410

New prosthetic devices – 359

Robotic Assisted Microsurgery - RAMS FY'97 – 358

Robotics for Space Station, tape 1 – 345

Robotics for Space Station tape 2 – 344

Robotics in space – 344

Robotics – 42

STS-112 Mission Highlights Resource, Part 3 of 3 – 310

STS-112 Mission Highlights Resource Tape Part 2 of 3 – 310

ROBOTS

Dante's volcano – 352

Robotic Assisted Microsurgery - RAMS FY'97 – 358

Robotics – 42

ROCKET ENGINES

Low thrust propulsion no. CV-110 – 335

Low thrust space propulsion – 334

STS-69 Mission Highlights Resource Tape – 68

ROCKET LAUNCHING

Delta/Wind Launch – 193

ROCKET SOUNDING

The 1980 highlights – 410

ROCKET TEST FACILITIES

ASRM testing at Stennis Space Center (proposed) – 335

ROCKET VEHICLES

Delta II Geotail -- 1st Stage and Solid Motor Booster Erection – 34

ROLL

STS Flight 64 mission highlights – 45

ROTARY WING AIRCRAFT

Rotorcraft research – 9

ROTATING BODIES

Rotating unbalanced mass proof-of-concept – 370

ROTATION

Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230 – 353

ROTOR STATOR INTERACTIONS

Rotor stator CGI – 7

ROTOR SYSTEMS RESEARCH AIRCRAFT

The 1980 highlights – 410

The 1982 highlights – 409

ROTORS

Rotor stator CGI – 7

ROVING VEHICLES

Exploring Mars – 387

FIDO - Video File – 369

Mars Pathfinder and Mars Global Surveyor Outreach Compilation – 395

Planetary Rover Program – 13

RUNWAYS

The 1971 highlights – 409

RUSSIAN SPACE PROGRAM

Mir 18 post flight presentation – 321

STS-101: Crew Interview / Yuri Vladimirovich Usachev – 182

SAFETY DEVICES

Go for Assembly: Building the International Space Station – 331

STS-26 Preflight Press Briefing: Crew Escape/Crew Equipment – 153

SAFETY MANAGEMENT

STS-26 Preflight Press Briefing: 5 Man Crew – 155

STS-26 Preflight Press Briefing: Shuttle System Changes – 152

SAGITTARIUS CONSTELLATION

Giant Star Clusters Near Galactic Core – 385

SAN MARCO SATELLITES

Mission San Marco – 30

SARSAT

Life saving satellites – 3

SATELLITE ANTENNAS

TDRS and the TDRS System – 330

SATELLITE COMMUNICATION

NASA images 8 – 317

STS-70 flight: Day 2 – 51

STS-70 flight: Day 3 – 50

STS-70 flight: Day 4 – 50

TDRS video clip – 318

SATELLITE CONSTELLATIONS

Delta 181 News Release – 324

SATELLITE DESIGN

STS-54 Tracking and Data Relay Satellite – 232

SATELLITE IMAGERY

A collection of The Movies – 348

Glacier Bay, Alaska, from the Ground, Air, and Space – 349

NASA images 8 – 317

Ozone hole – 351

Refocusing space technology – 377

SATELLITE NETWORKS

TDRS-1 Going Strong at 20 – 317

SATELLITE OBSERVATION

Finding fish from above – 347

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 175

SATELLITE ORBITS

Geotail Video News Release – 327

STS-93: Columbia / Chandra Mission Overview (from JSC) – 160

SATELLITE TRACKING

NASA images 8 – 317

SATELLITE TRANSMISSION

TDRS-1 Going Strong at 20 – 317

SATELLITE-BORNE INSTRUMENTS

STS-44 mission highlights resource tape. Part 1 of 2 – 54

SATELLITE-BORNE PHOTOGRAPHY

Hubble Space Telescope Briefing: HST Science Overview – 381

Mars observer mission: Mapping the Martian world – 393

SATURN 5 LAUNCH VEHICLES

Technology test bed – 9

SATURN (PLANET)
Life and the solar system: The CRAF and Cassini missions – 389
NASA images 12 – 388
Quasar Host Galaxies/Neptune Rotation/Galaxy Building Blocks/Hubble Deep Field/Saturn Storm – 386
Voyager II Encounter with Neptune: Voyager/Neptune Briefing – 396

SATURN RINGS
Voyager encounter highlights – 387

SATURN SATELLITES
Voyager II Encounter with Neptune: Voyager/Neptune Briefing – 396

SAUDI ARABIAN SPACE PROGRAM
STS-51G Mission Highlights Resource Tape – 141

SAWTOOTH WAVEFORMS
Sines and cosines. Part 1 of 3 – 368

SCALE MODELS
Radio controlled for research – 8
The model builders – 9

SCANNERS
Rotating unbalanced mass proof-of-concept – 370

SCANNING
Medical imaging – 376

SCHLIEREN PHOTOGRAPHY
Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

SCIENCE
Anton Grdina Primary Achievement Program – 373

SCIENTIFIC SATELLITES
ATLAS-SOHO: Satellite Arrival and Uncrating, Uncrating of the Propulsion Unit and Electric Module – 327
Atlas-Uncrating of SOHO satellite at the SAEF 2 – 329
STS-46 post flight press conference – 62
STS-69 flight day 5 highlights – 55
STS-69 flight day 6 highlights – 55
STS-69 flight day 7 highlights – 56
STS-69 flight day 8 highlights – 56
STS-69 flight day 9 highlights – 56
STS-69 postflight presentation – 57
STS-72 Flight Day 1 – 70
STS-72 Flight Day 4 – 76
STS-72 Flight Day 6 – 106
STS-72 Post Flight Presentation – 66

SCIENTIFIC VISUALIZATION
Comet impact 1994 animation reel – 383
EM-ANIMATE: A computer program for displaying and animating electromagnetic near-field and surface-current solutions: Video supplement to NASA Technical Memorandum 4539 – 366
Glacier Bay, Alaska, from the Ground, Air, and Space – 349
Images of Earth and Space: The Role of Visualization in NASA Science – 367
The 1988 computational fluid dynamics highlights – 341
The 1989 computational fluid dynamics highlights – 341

SCIENTISTS
Crew Activity Report / Flight Day 7 – 191
STS-91 Day 07 Highlights – 117

SCOUT LAUNCH VEHICLE
Scout: The unsung hero of space – 317

SCOUT PROJECT
Scout: The unsung hero of space – 317

SEA URCHINS
STS-77 Flight Day 6 – 74

SEALS (STOPPERS)
High temperature NASP engine seal development – 345

SEDIMENT TRANSPORT
Louisiana delta study – 350

SEMICONDUCTING FILMS
STS-69 flight day 4 highlights – 55
STS-69 flight day 5 highlights – 55
STS-69 flight day 6 highlights – 55

SEMICONDUCTORS (MATERIALS)
In-situ monitoring of crystal growth using MEPHISTO – 338
STS-78 Flight Day 13 – 77

SENSORS
Advanced microsensors – 378

SERVICE MODULE (ISS)

Space Station: The link to America's future – 318

SPACE STATION MOBILE SERVICING SYSTEM

STS-100 Photo-op/Shut-up/Depart O&C/Launch Endeavour On Orbit/Landing/Crew Egress – 310
STS-110 Flight Day 8 Highlights – 286
STS-110 Post Flight Presentation – 294
STS-111 Flight Day 5 Highlights – 289
STS-112 Flight Day 6 Highlights – 295
STS-112 Flight Day 7 Highlights – 297
STS-112 Flight Day 8 Highlights – 297

SPACE STATION MODULES

Expedition 3 Crew Interview: Frank Culbertson, Jr. – 255
International Space Station General Resource Reel – 331
International Space Station Overview – 330
ISS Animation Resource Reel – 331
ISS General Resource Reel – 331
Multi-Purpose Logistics Module Briefing – 244
STS-100 Crew Activity Report: Flight Day 7 Highlights – 250
STS-100 Flight Day 9 Highlights – 251
STS-101: Crew Activity Report / Flight Day 6 – 191
STS-102 Crew Activity Report/Flight Day 11 Highlights – 242
STS-102 Crew Activity Report/Flight Day 4 Highlights – 243
STS-102 Crew Activity Report/Flight Day 9 Highlights – 241
STS-102/Expedition 2 Mission Overview – 244
STS-105 Flight Day 10 Highlights – 262
STS-105 Mission Highlights Resource Tape: Flight Days 4-6 – 274
STS-108 Flight Day 10 Highlights – 269
STS-114 Crew Interviews Eileen Collins, CDR – 309
STS-71/Mir/Spacelab Mission Update – 176
STS-88 Crew Interview: Sergei Krikalev – 129

SPACE STATION PAYLOADS

Hey! What's Space Station Freedom? – 321
STS-106 Crew Activity Report / Flight Day Highlights Day 2 – 200

STS-96: SPACEHAB Double MOD/ICC Going into the Payload Bay – 160

SPACE STATION POWER SUPPLIES

Futurepath 1 – 8

Solar connection – 335

Space Station quarterly, May 1992 – 320

STS-101: Crew Activity Report / Flight Day 5 – 190

STS-101: Crew Interview - Jim Halsell – 189

SPACE STATION STRUCTURES

ISS Node 1 and 2 Resource Reel – 23

Space Station quarterly, May 1992 – 320

STS 110 Mission Highlights Resource Tape – 282

STS-110 Flight Day 4 Highlights – 294

STS-110 Post Flight Presentation – 294

STS-37 astronauts Ross and Apt during CETA hardware checkout – 363

STS-37 CETA evaluation with Ross – 360

STS-88 Day 09 Highlights – 126

STS-88 Endeavour: TCDT-Press Q & A at KSCNF Auditorium – 167

SPACE STATIONS

Answering the space medicine challenge – 357

Expedition 3 Crew Training Clips – 258

Houston, I think we've got a satellite – 320

Living well in space: Clinical care challenge – 357

Robotics for Space Station tape 2 – 344

Shuttle-C, the future is now – 42

Space Station quarterly, May 1992 – 320

Space Station resource reel – 319

STS 101: Post Flight Presentation – 193

STS-112 Crew Interviews: Sellers – 279

STS-71 Shuttle/Mir flight: Day 4 – 48

STS-84 Day 05 Highlights – 97

STS-86 Day 05 Highlights – 108

STS-95 Day 06 Highlights – 122
STS-95 Day 07 Highlights – 122
STS-95 Day 08 Highlights – 123
STS-95 Day 09 Highlights – 122
STS-95: Post Landing and Crew Walkaround of the Orbiter at the Shuttle Landing Facility – 159
STS-96: Crew Arrival at the KSC Shuttle Landing Facility – 152
STS-96 Meal - Suit Up - Depart O and C C7 Discovery Launch - On Orbit - Landing - Isos – 311
STS-98 Meal - Suit up - Depart O and C - Launch Atlantis On Orbit - Landing - Crew Egress – 35
STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 175
STS-99 Countdown Status Briefing – 175
STS-99 Crew Activities Report / Flight Day 07 Highlights – 166
STS-99 Crew Activities Report / Flight Day 09 Highlights – 171
STS-99 Crew Activities Report / Flight Day 10 Highlights – 169
STS-99 Crew Arrival for Launch of SRTM, Endeavour – 168
STS-99 Crew Arrives for Second Launch Attempt, SRTM Mission, Endeavour – 171
STS-99 Crew with Press, TCDT Crew Emergency Egress Training, Walkdown Pad 39A – 171
STS-99 Flight Crew Post-Landing Press Conference – 174
STS-99 Flight Day 04 Highlights and Crew Activities Report – 170
STS-99: Flight Day 05 Highlights and Crew Activities Report – 165
STS-99 Lift and Mate to External Tank in VAB, Endeavour, SRTM Mission – 172
STS-99 Payload Bay Door Opening at Pad 39A Endeavour – 168
STS-99: Post Flight Presentation – 182
STS-99 Prelaunch Press Briefing – 170
STS-99 Rollout to SRTM 39A – 169
STS-99 Rollover from OPF-2 to VAB – 169
The 1982 highlights – 409

SPACE TRANSPORTATION

Delta XTE Moved from Hangar M to Complex 17 at Cape Canaveral Air Station – 323
Delta XTE Moved to Vertical at Cape Canaveral Air Station Hangar AO – 323

SPACE VEHICLE CHECKOUT PROGRAM

Galileo probe spacecraft mission to Jupiter – 389
STS-30 Launch Highlights and Continuous Record from T-9 Mins. – 178
STS-31 crew training: firefighting, food tasting, EVA prep and post – 27

SPACEBORNE ASTRONOMY

ASTRO-1 to explore invisible universe – 333
Best of Hubble Space Telescope – 380
Cosmic Background Radiation Explorer (COBE) – 319
Delta XTE Spacecraft Removed from Transfer Cannister at Hangar AO, CCAS – 324
Hubble Space Telescope Briefing: HST Science Overview – 381
Magellan Press Conference (2 of 2) – 191
NASA space astronomy update 6 – 380
Space astronomy update – 380
STS-30 Post Flight Press Conference – 177
STS-31: Hubble HST Science – 180
STS-35: ASTRO-1 Assembly at O& – 184
STS-35: Mission Highlights Resource Tape – 185
STS-35/ASTRO-1: Day-1 Downlinks – 187
STS-35/Astro-1: Launch T-20 Through Orbit with Replays (Tape 2 of 2) – 185
STS-37: Gamma Ray Observatory (2 of 2) – 406
STS-37 Gamma Ray Observatory Arrival and VPF Activities – 406
STS-67 mission highlights resource tape – 47

STS-67 post flight presentation – 47

STS-69 postflight presentation – 57

STS-93/ Chandra Science Briefing – 167

STS-93 Crew Interview: Jeff Ashby – 154

STS-93 Mission Highlights Resource Tape – 140

SPACEBORNE EXPERIMENTS

All systems go! – 46

Challenger's night flight – 15

Endeavor: Now and then – 46

Expedition 3 Crew Interview: Frank Culbertson, Jr. – 255

Expedition 3 Crew Interview: Mikhail Turin – 255

Expedition 3 Crew Interview: Vladimir Dezhurov – 256

Expedition 6 Crew Interviews: Don Pettit, Flight Engineer 2/ International Space Station (ISS) Science Officer (SO) – 281

Expedition 6 Crew Interviews: Ken Bowersox CDR – 286

Flight Day 2 Highlights – 304

GAS highlights, 1988 – 11

Go for EVA – 46

In-situ monitoring of crystal growth using MEPHISTO – 338

International Space Station Overview – 330

Living in space – 364

Long Duration Exposure Facility is coming home – 318

Mid-deck experiments, STS-26 – 337

Newton in space – 369

Science operation in space: Lessons – 41

Skylab: The first 40 days – 14

Skylab: The second manned mission. A scientific harvest – 14

Space acceleration measurement system – 371

Spacelab Life Sciences-1 – 357

Spaceship Skylab: Wings of Discovery – 333

STS 63: Post flight presentation – 45

STS 87: Meal - Suit Up - Depart O&C - Launch Columbia On Orbit - Landing - Crew Egress – 311

STS Flight 64 mission highlights – 45

STS-102 Crew Activity Report/Flight Day 2 Highlights – 241

STS-102 Expedition 2 Increment and Science Briefing – 245

STS-105 Flight Day 2 Highlights – 260

STS-107 Crew Interviews: David Brown MS1 – 287

STS-107 Crew Interviews: Ilan Ramon, Mission Specialist – 294

STS-107 Crew Interviews: Kalpana Chawla MS2 – 286

STS-107 Crew Interviews: Laurel Clark, Mission Specialist – 292

STS-107 Crew Interviews: Michael Anderson, Mission Specialist – 291

STS-107 Crew Interviews: Rick D. Husband, Commander – 287

STS-107 Crew Interviews: William McCool, Pilot – 288

STS-107 Crew Training Clip – 295

STS-107 Flight Day 1 Highlights – 308

STS-107 Flight Day 10 Highlights – 306

STS-107 Flight Day 11 Highlights – 306

STS-107 Flight Day 12 Highlights – 305

STS-107 Flight Day 13 Highlights – 307

STS-107 Flight Day 14 Highlights – 307

STS-107 Flight Day 15 Highlights – 308

STS-107 Flight Day 3 Highlights – 304

STS-107 Flight Day 5 Highlights – 305

STS-107 Flight Day 6 Highlights – 307

STS-107 Flight Day 7 Highlights – 304

STS-107 Flight Day 8 Highlights – 304

STS-107 Flight Day 9 Highlights – 305

STS-107 Mission Highlights Resource, Part 2 of 4 – 315

STS-107 Mission Highlights Resource, Part 3 of 4 – 316

STS-107 Mission Highlights Resource, Part 4 of 4 – 316

STS-107 Mission Highlights Resource Tape, Part 1 of 4 – 315

STS-26 protein growth (PCG) experiment – 337

STS-26 SSIP briefing – 337

STS-29 crew with student experiment – 355

STS-30: Mission Highlights Reel – 186

STS-31 onboard 16mm photography quick release – 40

STS-37: Gamma Ray Observatory (2 of 2) – 406

STS-40 crew during spacelab Sim – 28

STS-40 Get Away Special Experiment Preflight Briefing – 198

STS-42 Discovery/Breakfast, Suit-Up, Depart O&C, Ingress, Launch, On-Orbit, and Landing – 208

STS-42 Preflight Background Briefing Life Sciences (MSFC) – 208

STS-42/Discovery/IML-1 Admiral Richard Truly Press Briefing – 200

STS-43 Astronaut Interview in Space – 208

STS-43 Crew Briefing – 219

STS-43 post flight press conference – 52

STS-44 mission highlights resource tape. Part 1 of 2 – 54

STS-45 Atlas-1/ Breakfast & Suit-Up, Depart O&C, Ingress, Launch with Isolated Views, On-Orbit Activities, and Landing with Isolated Views – 210

STS-46 post flight press conference – 62

STS-47 mission highlights resource tape – 53

STS-47 Mission Overview – 203

STS-48 mission highlights resource tape. Part 1 of 2 – 52

STS-48 post flight press conference – 53

STS-49 CPCG – 207

STS-52 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 234

STS-52 Crew Briefing – 238

STS-53 Launch and Landing – 232

STS-54 Physics of Toys – 233

STS-55 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 236

STS-55 Crew Briefing, Part 1 of 2 – 222

STS-56 Preflight Briefs/Mission Overview from MSFC – 216

STS-59 mission highlights resource tape – 44

STS-59 post flight presentation – 14

STS-60 Discovery/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 235

STS-60 mission highlights resource tape – 43

STS-60 post flight press conference – 13

STS-61 post flight press conference – 14

STS-62 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 234

STS-62 mission highlights resource tape – 43

STS-62 post flight press conference – 13

STS-65 post flight presentation – 14

STS-66 mission highlights resource tape – 46

STS-66 post flight presentation – 44

STS-67 mission highlights resource tape – 47

STS-67 post flight presentation – 47

STS-83 Day 03 – 96
STS-83 Day 04 – 96
STS-83 Mission Highlights Resources Tape – 96
STS-93 Flight Day 3 Highlights and Crew Activities – 136
STS-93 Flight Day 4 Highlights and Crew Activities – 137
STS-94 Day 08 Highlights – 99
STS-97 ISS Science Payloads Briefing – 221
TES (Thermal Energy Storage) video news release – 338
Tethered satellite: Forces and motion – 320
Toys in space, 2 – 45
ZENO: A critical fluid light scattering experiment – 341

SPACEBORNE PHOTOGRAPHY

Legacy of Gemini – 14
STS-30 crew photo in building 4 – 342
STS-34 Arriflex and IMAX camera training – 343
STS-35 onboard photography quick release – 41
STS-44 onboard 16mm photography – 53

SPACEBORNE TELESCOPES

ASTRO-1 to explore invisible universe – 333
Hubble Space Telescope Briefing: HST Science Overview – 381
STS-35: ASTRO-1 Assembly at O& – 184
STS-35/ASTRO-1: Day-1 Downlinks – 187
STS-37: Gamma Ray Observatory (2 of 2) – 406
STS-66 mission highlights resource tape – 46
STS-93: Columbia / Chandra Mission Overview (from JSC) – 160
The four great observatories – 379

SPACECRAFT CABINS

STS-101 Crew Training – 179

SPACECRAFT COMMUNICATION

Apollo 11: The Goddard connection – 12
STS 63 flight day 4 highlights/MIR-Shuttle rendezvous – 45
STS-35 mission highlights resource tape – 41
STS-71 Shuttle/Mir flight: Day 4 – 48
STS-71 Shuttle/Mir flight: Day 7 – 49
STS-71 Shuttle/Mir flight: Day 8 – 49
TDRS-1 Going Strong at 20 – 317

SPACECRAFT COMPONENTS

Cooler Deployment, GOES J on ATLAS – 340
Delta Wind Mating to Upper Stage at PHSF – 326
Galileo probe ready to go – 388
STS-43 Atlantis Main Engine #3 Computer Controller Removal and Replacement – 209
STS-99 Payload Door Closure in Orbiter Processing Facility #2 Endeavour (SRTM) – 150

SPACECRAFT CONSTRUCTION MATERIALS

National aerospace plane – 336
STS-87 Mission Highlights Resources Tape – 128

SPACECRAFT DESIGN

Designing Space Station – 319
Exploring Mars – 387
Shuttle-C, the future is now – 42
Space Shuttle: Ground Support – 247
Space Station resource reel – 319
The model builders – 9

SPACECRAFT DOCKING MODULES

STS-111 Flight Day 10 Highlights Replay – 285
STS-111 Flight Day 4 Highlights Replay – 284
STS-111 Mission Highlights Resource Tape – 300

SPACECRAFT DOCKING

Gemini 8, This is Houston, flight – 320
International Space Station General Resource Reel – 331
ISS General Resource Reel – 22
ISS Service Module Pre-Launch – 332
Six degree of freedom – 366
Skylab: The first 40 days – 14
STS 110 Mission Highlights Resource Tape – 283
STS-100 Crew Activity Report: Flight Day 3 Highlights – 248
STS-100 Crew Interview: Chris Hadfield – 245
STS-100 Crew Interview: Jeff Ashby – 243
STS-100 Crew Interview: John Phillips – 243
STS-100 Crew Interview: Kent Rominger – 243
STS-100 Crew Interview: Scott Parazynski – 244

STS-100 Crew Interview: Umberto Guidoni – 243

STS-100 Crew Interview: Yuri Lonchakov – 244

STS-100 Flight Day 11 Highlights – 251

STS-100 Mission Highlights Resource Tape – 258

STS-100 Post Flight Presentation – 253

STS-101: CAR / Flight Day 03 Highlights – 190

STS-101: Crew Activity Report CAR/Flight Day 04 Highlights – 190

STS-101: Crew Activity Report/Flight Day 8 Highlights – 191

STS-101: Crew Interview - Jim Halsell – 189

STS-101 Mission Highlights Resource Tape, Part 1 of 3 – 227

STS-101 Mission Highlights Resource Tape, Part 2 of 3 – 226

STS-101 Mission Overview Briefing – 246

STS-102 Crew Activity Report/Flight Day 12 Highlights – 242

STS-102 Crew Activity Report/Flight Day 3 Highlights – 241

STS-102 Mission Highlight Resource Tape, Tape 1 of 4 – 252

STS-102 Mission Highlight Resource Tape, Tape 3 of 4 – 252

STS-102 Post Flight Presentation – 254

STS-102/Expedition 2 Mission Overview – 244

STS-104 Crew Interview: Charlie Hobaugh – 250

STS-104 Crew Interview: Janet Kavandi – 250

STS-104 Crew Interview: Jim Reilly – 249

STS-104 Crew Interview: Mike Gernhardt – 249

STS-104 Crew Interview: Steve Lindsey – 250

STS-104 Flight Day 11 Highlights – 257

STS-104 Mission Highlights Resource Tape – 268

STS-105 Flight Day 11 Highlights – 261

STS-105 Flight Day 3 Highlights – 260

STS-105 Mission Highlights Resource Tape: Flight Days 10-13 – 275

STS-105 Post-Flight – 266

STS-98 Crew Activity Report/Flight Day 10 Highlights – 238

STS-98 Crew Activity Report/Flight Day 11 Highlights – 238

STS-98 Crew Activity Report/Flight Day 3 Highlights – 237

STS-98 Post Flight Presentation – 253

Zvezda Launch Coverage – 332

SPACECRAFT ELECTRONIC EQUIPMENT

STS-33: At Pad B - IEA Removal; STS-32: In the VAB HB1 - IEA Removal – 184

STS-33: Removal of the I.E.A. at Pad B and Inspection at the ARF – 184

STS-75 Flight Day 2 – 70

STS-75 Flight Day 3 – 65

SPACECRAFT ENVIRONMENTS

Living well in space: Monitoring environment – 356

STS-63 mission highlights resource tape – 47

SPACECRAFT EQUIPMENT

STS-106 Crew Activities Report/Flight Day 9 Highlights – 211

STS-111 Crew Training Clip – 292

STS-36 crew EVA prep and post-training, bailout exercises, final bench review – 363

STS-46 Tethered Satellite System Mate to Deployer – 223

STS-49 Endeavour/Removal of Engine 2 at Pad B – 217

STS-52 Lageos/Iris Apogee Kick Motor in SAEF-2 – 228

STS-55 Downline Waste Water Tank Problem – 220

STS-59 Endeavour Space Radar Lab I Antenna Installed on Pallet – 231

STS-92 Z-1 Truss Overview – 220

STS-95 CEIT in the OPF-2 and the MPPF – 163

STS-99 CEIT at the OPF High Bay-2, Endeavour, SRTM Mission – 174

SPACECRAFT INSTRUMENTS

Galileo Science Writers' Briefing – 397

SAMS (space acceleration measurement system) – 334

Space acceleration measurement system – 371

STS-109 Mission Highlights Resource Tape – 296

STS-69 flight day 5 highlights – 55

STS-69 flight day 6 highlights – 55

SPACECRAFT LANDING

A New Beginning – 236

Apollo 10 - 11 – 19

Apollo 11 Facts Project [Spacecraft Retrieval and the Crew in the Anti-Contamination Chamber] – 20

Apollo 13 Facts: Press Conference – 23

Apollo 13 Facts: Recovery – 21

Challenger's night flight – 15

Launch, entry, and landing resource clip – 36

Mars Pathfinder B-roll – 392

National Anthem – 334

Return to Space Mission: The STS-26 crew report – 38

Space Shuttle: The Orbiter – 251

STS 110 Mission Highlights Resource Tape – 283

STS Flight 64 mission highlights – 45

STS-100 Mission Highlights Resource Tape – 259

STS-101 Meal - Suit Up - Depart O&C Launch - On Orbit - Landing - Crew Depart – 378

STS-101 Mission Highlights Resource Tape, Part 3 of 3 – 227

STS-102 Mission Highlight Resource Tape, Tape 4 of 4 – 252

STS-104 Mission Highlights Resource Tape – 268

STS-106 Mission Highlights Resource Tape – 252

STS-106 Post Flight Presentation – 227

STS-108 Mission Highlights Resource Tape – 278

STS-108 Post Flight Presentation – 272

STS-109 Crew Interviews - Carey – 270

STS-111 Mission Highlights Resource Tape – 301

STS-111/Endeavour/ISS UF2 Landing with Playbacks – 24

STS-26 missions highlight resource tape – 40

STS-27 crew presentation clip – 40

STS-33 launch and landing clip – 37

STS-35 mission highlights resource tape – 41

STS-37 Landing – 177

STS-38: Landing at Kennedy Space Center/Crew Exit – 212

STS-38: Post Landing News Conference – 196

STS-39: Landing at KSC – 197

STS-39/Breakfast, Suit-Up, Depart O&C, Launch, On-Orbit, and Landing – 208

STS-42 Discovery/Breakfast, Suit-Up, Depart O&C, Ingress, Launch, On-Orbit, and Landing – 208

STS-43 Atlantis/Breakfast & Suit-Up, Depart O&C, Ingress, Launch with Isolated Views, TDRS-E Deploy, and Landing with Isolated Views – 208

STS-45 Atlas-1/ Breakfast & Suit-Up, Depart O&C, Ingress, Launch with Isolated Views, On-Orbit Activities, and Landing with Isolated Views – 210

STS-46 Mission Highlights Resource Tape – 209

STS-46 Standard Mission Handout Tape – 219

STS-47 Spacelab-J Landing at KSC SLF – 209

STS-49 Endeavour Landing – 217

STS-49 Endeavour Mission Highlights Resource Tape, Part 2 of 2 – 237

STS-51C Launch and Landing – 139

STS-52 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 234

STS-53 Launch and Landing – 232

STS-55 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 236

STS-56 Atlas-2/Breakfast, Suit-up, Depart O&C, Launch, On Orbit, Landing with ISOS – 215

STS-56 Landing Replays at KSC – 220

STS-56 Post Landing Press Conference – 224

STS-57 Landing at KSC – 231

STS-60 Discovery/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 235

STS-62 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 234

STS-65 mission highlights resource tape – 44

STS-71 Shuttle/Mir flight: Day 10 – 49

STS-71/Mir/Spacelab Landing at KSC – 176

STS-92 Mission Highlights Resource Tape – 259

STS-92 Post-Flight Presentation – 253

STS-96 Meal - Suit Up - Depart O and C C7 Discovery Launch - On Orbit - Landing - Isos – 311

STS-96 Mission Highlights – 135

STS-97 Mission Highlights Resource Tape – 239

STS-98 Mission Highlights Resource Tape – 247

STS-99 Mission Highlights Resource Tape, Part 2 of 2 – 226

SPACECRAFT LAUNCHING

A New Beginning – 236

A/C 67 Investigation Board Final Report – 375

Apollo 10 - 11 – 19

Apollo 11 Facts Project [Pre-Launch Activities and Launch] – 20

Atlas/Centaur-SOHO Pre-Launch News Conference – 35

Challenger Anniversary Resource Tape – 66

COBE video news – 340

Delta II/Geotail Pre-Launch Press Conference – 324

Delta Near Launch Activities, Launch Complex 17B, Cape Canaveral Air Station – 328

Delta XTE Launch Activities and Scrub (Anomaly) at Cape Canaveral Air Station Complex 17 – 32

Delta/NEAR Launch – 33

Expedition 7 Crew Interview: Ed Lu – 23

Expedition 7 Crew Interview: Yuri Malenchenko – 24

HL-20 personnel launch system – 1

ISS Service Module Pre-Launch – 332

KSC wildlife show – 355

Launch, entry, and landing resource clip – 36

Long Duration Exposure Facility – 319

Mars Observer Orbit Insertion Briefing – 24

Mission San Marco – 30

National Anthem – 334

President Clinton's Arrival at CCAS and Visit to KSC for Launch of STS-95 – 161

RADARSAT Launch – 193

Return to Space Mission: The STS-26 crew report – 38

Shuttle 51L: Challenger – 43

Skylab: The first 40 days – 14

Space basic – 378

Space Shuttle: The Orbiter – 251

STS-100 Crew Activity Report: Flight Day 1 Highlights – 248

STS-100 Mission Highlights Resource Tape – 258

STS-100 Post Flight Presentation – 253

STS-101: Flight Day Highlights / CAR – 190

STS-101 Meal - Suit Up - Depart O&C Launch - On Orbit - Landing - Crew Depart – 378

STS-101 Mission Highlights Resource Tape, Part 1 of 3 – 227

STS-102 Countdown Status Briefing – 246

STS-102 Countdown Status – 245

STS-102 Crew Activity Report/Flight Day 1 Highlights – 240

STS-102 Mission Highlight Resource Tape, Tape 1 of 4 – 252

STS-102 Post Flight Presentation – 254

STS-102 Prelaunch Press Conference – 245

STS-103 Discovery Launch Scrub Press Conference – 147

STS-103 Photo-op/Suit-up/Depart O&C/Launch Discovery On-Orbit/Landing/Crew Egress – 36

STS-104 Flight Day 1 Highlights – 254

STS-104 Mission Highlights Resource Tape – 268

STS-104 Post Flight Presentation – 264

STS-104 Post-Launch News Conference – 263

STS-105 Countdown Status Briefing – 264

STS-105 Flight Day 1 Highlights – 261

STS-105 Mission Highlights Resource Tape: Flight Days 1-3 – 275

STS-105 Post-Flight – 266

STS-105 Post-Launch Press Conference – 264

STS-105/Discovery/ISS 7A.1: Pre-Launch Activities, Launch, Orbit Activities and Landing – 313

STS-106 Countdown Status Briefing – 229

STS-106 Crew Activity Report/Flight Day 1 Highlights – 201

STS-106 Post Flight Presentation – 227

STS-106 Post Launch Press Conference – 230

STS-107 Mission Highlights Resource Tape, Part 1 of 4 – 315

STS-108 Flight Day Highlights: Flight Day 1 – 266

STS-108 Post Flight Presentation – 272

STS-109 Flight Day 1 Highlights – 272

STS-109 Post Flight Presentation – 295

STS-110 Flight Day 1 Highlights – 289

STS-110/Atlantic/ISS 8A Pre-Launch On Orbit-Landing-Crew Egress – 312

STS-112 Flight Day 1 Highlights – 298

STS-113 Flight Day 1 Highlights – 301

STS-113 Flight Day 2 Highlights – 302

STS-113 Mission Highlights Resource Tape Flight Days 1-3. Tape: 1 of 4 – 314

STS-109 Crew Interviews: James H. Newman – 270

STS-109 Crew Interviews: Michael J. Massimino – 270

STS-109 Crew Training – 271

STS-109 Flight Day 10 Highlights – 274

STS-109 Flight Day 11 Highlights – 277

STS-109 Mission Highlights Resource Tape – 296

STS-110 Flight Day 8 Highlights – 286

STS-110/Atlantic/ISS 8A Pre-Launch On Orbit-Landing-Crew Egress – 312

STS-111 Crew Interviews: Phillippe Perrin, Mission Specialist 1 – 281

STS-111 Crew Training Clip – 292

STS-111 Flight Day 3 Highlights – 291

STS-111 Flight Day 8 Highlights – 293

STS-111 Mission Highlights Resource Tape – 300

STS-111/Endeavour/ISS UF2 Pre-Launch Activities: Launch with Playbacks – 36

STS-112 Crew Interviews - Wolf – 288

STS-112 Crew Training Clip – 291

STS-112 Flight Day 1 Highlights – 298

STS-112 Flight Day 10 Highlights – 290

STS-112 Flight Day 5 Highlights – 288

STS-112 Mission Highlights Resource Tape, Part 1 of 3 – 309

STS-112/Atlantis/ISS 9A Pre-Launch - Launch On-Orbit - Landing - Crew Egress – 311

STS-113 Crew Interviews: Jim Wetherbee, Commander – 280

STS-113 Flight Day 3 Highlights – 301

STS-113 Flight Day 5 Highlights – 301

STS-113 Flight Day 6 Highlights – 302

STS-113 Flight Day 9 Highlights – 303

STS-113 Mission Highlights Resource Tape Flight Days 12-15. Tape: 4 of 4 – 314

STS-113 Mission Highlights Resource Tape Flight Days 1-3. Tape: 1 of 4 – 314

STS-113 Mission Highlights Resource Tape Flight Days 4-6 Tape: 2 of 4 – 313

STS-113 Mission Highlights Resource Tape Flight Days 7-11. Tape: 3 of 4 – 314

STS-113/Endeavour/ISS 11A Pre-Launch - Launch On Orbit - Landing - Crew Egress – 312

STS-114 Crew Interviews Eileen Collins, CDR – 309

STS-114 Crew Training Clip – 30

STS-11/41-B Post Flight Press Conference – 155

STS-26 crew clothing, glove molding, and personal hygiene – 364

STS-26 crew participation in meetings – 11

STS-26 generic integrated IUS deploy simulation – 26

STS-26 IUS and latch contingency training – 26

STS-26 missions highlight resource tape – 40

STS-26 Preflight Press Briefing: 5 Man Crew – 155

STS-26 Preflight Press Briefing: Crew Escape/Crew Equipment – 153

STS-26 Preflight Press Briefing: Flight Crew and TDRS – 153

STS-27 crew deorbit prep in SMS with Gibson, Shepard, Mullane, Ross, and G. Gardner – 41

STS-27 crew fire training and glove molding – 363

STS-27 crew post-insertion deorbit-prep in CCT – 362

STS-27 EMU and RMS contingency training – 362

STS-28 Adamson and Brown EMU walk through – 361

STS-29 crew bailout in WETF – 361

STS-29 crew food tasting in building 45 – 361

STS-29 crew IMAX camera training – 343

STS-29 mission highlights resource tape – 39

STS-29 Post-Flight Press Conference – 38

STS-29 post-insertion/deorbit prep and crew bailout – 37

STS-29: Pre-Launch Preparations/Launch and Landing – 183

STS-30 Launch Highlights and Continuous Record from T-9 Mins. – 178

STS-31 Mission Highlights Resource Tape – 179

STS-32 crew training for lower body negative pressure unit and AFE – 357

STS-32 LDEF EVA training in WETF with Low and Dunbar – 361

STS-33 Carter and Thorton during WETF activities – 362

STS-33 crew post flight film – 40

STS-33 EVA prep and post with Gregory, Blaha, Carter, Thorton, and Musgrave in FFT – 40

STS-34 Arriflex and IMAX camera training – 343

STS-34 final bench review – 360

STS-34 McCully and Baker during IFM training – 39

STS-34 mission highlights resource tape, part 1 – 39

STS-34 post-flight press conference – 38

STS-35: Astronaut Departure – 181

STS-35 crew trash compactor briefing – 25

STS-35 EVA payload training in WETF – 359

STS-35/ASTRO-1: Breakfast/Suit-up /Depart O & C / Ingress / Launch with Isolated Views – 187

STS-36 crew EVA prep and post-training, bailout exercises, final bench review – 363

STS-36 crew presentation clip – 41

STS-36: Isolated Camera Breakfast Suit-up Walkout – 186

STS-37 Breakfast / Ingress / Launch & ISO Camera Views – 164

STS-37 Post-flight Crew Press Conference – 162

STS-37/Atlantis/GRO – 167

STS-38 crew training: Habitation equipment procedures, bailout in CCT, 70mm photo class, EVA prep and post, and firefighting – 363

STS-38: Landing at Kennedy Space Center/Crew Exit – 212

STS-40 TCDT – 198

STS-40/SLS-1 Breakfast/Suit-up/Depart O&C/Ingress/Launch with isolated Views – 199

STS-41 mission highlights resource tape – 42

STS-41 onboard 16mm photography quick release – 42

STS-41 Ulysses TCDT Activities – 199

STS-41D Post Flight Press Conference with Highlights – 144

STS-42 mission highlights resource tape. Part 2 of 2 – 52

STS-43 Astronaut Interview in Space – 208

STS-43 Crew Briefing – 219

STS-44 mission highlights resource tape. Part 1 of 2 – 54

STS-44 mission highlights resource tape. Part 2 of 2 – 54

STS-46 Crew Training – 207

STS-47 Crew Briefing – 222

STS-47 mission highlights resource tape – 53

STS-48 mission highlights resource tape. Part 1 of 2 – 52

STS-48 mission highlights resource tape. Part 2 of 2 – 53

STS-48 post flight press conference – 53

STS-49 Astronaut Flight Crew – 233

STS-50 Crew Arrival – 205

STS-50 Crew Briefing – 218

STS-51 Crew Briefing – 217

STS-52 Astronaut Crew Activities for TCDT – 228

STS-53 TCDT O&C Exit – 232

STS-53 TCDT Training and Press Q&A at Pad A – 231

STS-54 Crew Arrival for TCDT – 232

STS-55 Crew Arrival – 216

STS-56 Astronaut Crew Arrival at KSC for Launch – 216

STS-56/TCDT O&C Walkout – 219

STRATEGY
Malcolm Baldrige National Quality Award winners 1989 – 375

STRATOSPHERE
Airborne Arctic stratospheric expedition: Ozone – 4
Ozone hole airborne Arctic stratospheric expedition (pre-flight) – 351
Ozone hole – 351

STRUCTURAL ANALYSIS
Atlas Centaur 77 GOES-J Wet Dress Rehearsal at Cape Canaveral Air Station – 326

STRUCTURAL DESIGN
Go for EVA – 46
Hey! What's Space Station Freedom? – 321

STRUCTURES
The making of the time capsule – 29

STUDENTS
Liftoff to learning: Assignment space – 51
National Boy Scout Jamboree – 371
STS-107 Flight Day 9 Highlights – 305
STS-29 crew with student experiment – 355
Student researchers – 370

SUBORBITAL FLIGHT
Astronauts number 2 – 11

SUITS
Cool suit – 356

SULFUR
Comet Shoemaker-Levy 9 Impact Press Conference – 396

SUN
STS-41 Ulysses: Ulysses - The Movie – 198
Ulysses: A solar odyssey – 12
Unmasking the Sun – 405
Welcome to Outer Space – 16

SUPERCOMPUTERS
The world's most powerful computer – 366

SUPERCRITICAL WINGS
Dryden and transonic research – 1

SUPERNOVAE
Farthest Supernova Bolsters Proof for a Mysterious Form of Energy Pervading the Universe – 382

SUPERSONIC COMBUSTION RAMJET ENGINES
Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

SUPERSONIC FLOW
Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 343

SUPERSONIC JET FLOW
Pressure Wave Propagation in a Screech Cycle – 95

SUPERSONIC TRANSPORTS
The High Speed Research Program – 3

STS-81 Flight Day 6 – 86

STS-81 Flight Day 7 – 85

STS-86 Day 04 Highlights – 108

STS-86 Day 05 Highlights – 108

STS-86 Mission Highlights Resources Tape – 111

STS-91 Day 06 Highlights – 117

SUPPORT SYSTEMS
STS-109 Flight Day 2 Highlights – 273

SUPPORTS
Delta XTE Lifted To Work Stand – 326

SURFACE PROPERTIES
EM-ANIMATE: A computer program for displaying and animating electromagnetic near-field and surface-current solutions: Video supplement to NASA Technical Memorandum 4539 – 366

SURFACE TEMPERATURE
Testing the waters from space – 347

SURFACE WATER
Galileo Science Update Europa Unveiled – 88

SURGERY
Laser artery repair – 356

Robotic Assisted Microsurgery - RAMS FY'97 – 358

SURGICAL INSTRUMENTS
Robotic Assisted Microsurgery - RAMS FY'97 – 358

SURVEYOR PROJECT
Mars Surveyor '98 Animation From JPL – 189

The 1968 highlights – 409

SURVIVAL
1990 ASCAN land survival training – 362

1995 ASCAN Training: Land Survival – 364

NASA report to education, volume 9 – 372

STS-29 crew bailout in WETF – 361

SWEAT
Cool suit – 356

SWEPT FORWARD WINGS
X-29: Experiment in flight – 5

X-29: Research aircraft – 5

SWINGBY TECHNIQUE
Galileo Earth Moon Flyby – 396

SWITCHING
STS-109/Columbia/HST Pre-Launch Activities/Launch On Orbit-Landing-Crew Egress – 334

SYMMETRY
Sines and cosines. Part 1 of 3 – 368

SYNCHRONOUS PLATFORMS
Atlas Centaur/GOES-J News Conference – 154

SYNCOM 4 SATELLITE
STS-32 mission highlights resource tape – 10

STS-32 onboard 16mm photography quick release – 39

STS-41D Post Flight Press Conference with Highlights – 144

SYNTHETIC APERTURE RADAR
Insight to global change: EOS/SAR mission – 351

SYSTEMS ANALYSIS
STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 188

SYSTEMS ENGINEERING
Dan Goldin Presentation: Pathway to the Future – 134

SYSTEMS INTEGRATION
New Mission Control Center Briefing – 17

T-38 AIRCRAFT
Adamson, Jim – 363

STS-103 Flight Crew Departs from Shuttle Landing Facility in T-38 for Acrobatics Flight, Discovery – 145

STS-34: Galileo TCDT – 185

STS-37/GRO Crew Arrival and TCDT Activities – 178

STS-38 Atlantis Crew Arrival – 212

STS-43 Astronaut Arrival for TCDT – 210

STS-45/Atlas-1 TCDT Activities – 209

STS-93 Crew Training – 155

STS-93: Crew Visit and Departure – 158

STS-95: Discovery Flight Crew Arrives at the Shuttle Landing Facility for TCDT – 160

STS-96 TCDT Crew Arrival – 165

TAKEOFF
F-15 resource tape – 7

TALKING
ISS Expedition 1 Crew Interviews: Sergei K. Krikalev – 197

ISS Expedition 1 Crew Interviews: William M. Shepherd – 196

ISS Expedition 1 Crew Interviews: Yuri P. Gidzenko – 198

STS-101: Crew Interview / James S. Voss – 180

STS-101: Crew Interview / Susan J. Helms – 180

STS-101: Crew Interview / Yuri Vladimirovich Usachev – 182

STS-106 Crew Interviews: Edward T. Lu – 195

STS-106 Crew Interviews: Richard A. Mastracchio – 194

STS-106 Crew Interviews: Scott D. Altman – 194

STS-106 Crew Interviews: Terrence W. Wilcutt – 195

STS-97 Crew Interviews: Brent W. Jett Jr. – 212

STS-97 Crew Interviews: Michael J. Bloomfield – 212

STS-99: Post Flight Presentation – 182

TANKS (CONTAINERS)
STS-55 Downline Waste Water Tank Problem – 220

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 2 of 4 – 338

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 3 of 4 – 339

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 4 of 4 – 338

TARGET ACQUISITION
EVA retriever demonstration – 345

TASTE
STS-29 crew food tasting in building 45 – 361

TDR SATELLITES
STS-26 generic integrated IUS deploy simulation – 26
STS-26 missions highlight resource tape – 40
STS-26 onboard 16mm photography quick release – 37
STS-26 Post-Flight Press Conference – 37
STS-26 Preflight Press Briefing: Flight Crew and TDRS – 153
STS-26 through STS-34, deploy activities – 407
STS-29 mission highlights resource tape – 39
STS-43 post flight press conference – 52
STS-43 TDRS at the PCR/Cannister Doors Opening – 208
STS-43 TDRS-E Sharp Edge Inspection at VPF – 219
STS-54 TDRS-F in Cargo Bay at Pad B – 234
STS-54 Tracking and Data Relay Satellite – 232
STS-54 Tracking Data and Relay Satellite Briefing – 236
STS-70 mission highlights – 56
STS-70 post flight presentation – 52
TDRS and the TDRS System – 330
TDRS press release – 319
TDRS video clip – 318
TDRS-1 Going Strong at 20 – 317

TECHNOLOGICAL FORECASTING
An announcement by Dan Goldin – 375
Dan Goldin Presentation: Pathway to the Future – 134
Hernandez Engineering: NASA – 321
Rover story – 393

TECHNOLOGY ASSESSMENT
Chemical engineering: Measurements for a competitive age – 336
Hernandez Engineering: NASA – 321
NASA: The state of the agency – 375
NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

TECHNOLOGY TRANSFER
From space to Earth – 377
Medical imaging – 376

TECHNOLOGY UTILIZATION
Endeavor: Now and then – 46
Finding fish from above – 347
From space to Earth – 377
Hurricane Andrew mission – 354
Improved mapping system – 347
Monitoring history – 376
NASA images 16 – 377
NASA images 7 – 377
NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340
Refocusing space technology – 377
Revitalizing general aviation – 7
Saving Yellowstone – 350
Theodore von Karman Lecture Series: 'Technologies of the Future--Today' – 378
Unistick vehicle controller – 345

TELECOMMUNICATION
STS-31: Mission Highlights – 185

TELECONFERENCING
STS-31: Mission Highlights – 185
STS-96 FD Highlights and Crew Activities Report: Flight Day 07 – 133
STS-99 Crew News Conference/ESA Call Flight Day 8 – 173
Telemedicine Spacebridge – 357

TELEOPERATORS
Teleoperation and supervised autonomy for ORU exchange – 346
Telepresence media resource tape – 366

TELEROBOTICS
Robotic Assisted Microsurgery - RAMS FY'97 – 358
Robotics Demo Peer Group review – 346
Teleoperation and supervised autonomy for ORU exchange – 346

TELEVISION CAMERAS
STS-112 Flight Day 6 Highlights – 295

TELEVISION SYSTEMS
STS-48 mission highlights resource tape. Part 2 of 2 – 53
STS-72 Mission Update Flight Day 8 – 107
STS-72 Mission Update Flight Day 9 – 107
STS-73 Post Flight Presentation – 69
STS-99: Flight Day 05 Highlights and Crew Activities Report – 165
Welcome to the Ohio Aerospace Institute – 372

TELSTAR PROJECT
STS-41D Post Flight Press Conference with Highlights – 144

TEMPERATURE CONTROL
Cool suit – 356

TEMPERATURE PROBES
STS-40 Temperature Probe and MDM – 211

TERMINOLOGY
Sines and cosines. Part 1 of 3 – 368

TERRAIN
Improved mapping system – 347
STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 175

TEST CHAMBERS
Unitary plan wind tunnel landmark dedication and revitalization – 409

TEST FACILITIES
Aerospace test facilities at NASA LERC Plumbrook – 28
Building the Integrated Test Facility: A foundation for the future – 10
GFSC-TV demo tape – 26
High Heat Flux Facility – 9
John C. Stennis Space Center overview – 29
Stennis Space Center 1992 – 28
The Western Aeronautical Test Range – 10
Way station to space: The history of Stennis Space Center – 29
White Sands Test Facility – 30

TEST FIRING
ASRM testing at Stennis Space Center (proposed) – 335
SSME testing at Stennis Space Center – 334
STS-37: TCDT Pad B Atlantis GRO (1 of 3) – 188
STS-37: TCDT Pad B Atlantis GRO (2 of 3) – 188
STS-37: TCDT Pad B Atlantis GRO (3 of 3) – 188
STS-41G TCDT – 138
Technology test bed – 9

TEST RANGES
The Western Aeronautical Test Range – 10
X-31 tailless testing – 6

TEST STANDS
Technology test bed – 9

TESTS
Goddard Space Flight Center robotics demo – 344

TETHERED SATELLITES
STS-46 Eureca/TSS/Compiled Tape for Editors – 218
STS-46 Mission Highlights Resource Tape – 209
STS-46 post flight press conference – 62
STS-46 Tethered Satellite System Mate to Deployer – 223
STS-46 TSS-1 – 217
STS-75 Flight Day 13 – 67
STS-75 Flight Day 1 – 65
STS-75 Flight Day 4 – 65
STS-75 Flight Day 5 – 65

STS-75 Flight Day 6 – 71

STS-75 Flight Day 9 – 64

STS-75 Post Flight Presentation – 64

Tethered satellite: Forces and motion – 320

TETHERLINES

Go for Assembly: Building the International Space Station – 331

TEXTS

The future of bibliographic standards in a networked information environment – 377

THEOREMS

Discovering the Theorem of Pythagorus – 368

Sines and cosines. Part 3 of 3 – 367

THEORETICAL PHYSICS

Tethered satellite: Forces and motion – 320

THERMAL CONTROL COATINGS

Robotics – 42

THERMAL INSULATION

STS-109 Flight Day 5 Highlights – 274

STS-82 Day 05 Highlights – 91

STS-82 Day 07 Highlights – 92

STS-82 Day 08 Highlights – 92

THERMAL MAPPING

Testing the waters from space – 347

THERMOELECTRIC GENERATORS

STS-34: JPL RTG Safety Tests – 182

THRUST VECTOR CONTROL

VSTOL Systems Research Aircraft (VSRA) Harrier – 4

THUNDERSTORMS

Inertial oscillation of a vertical rotating draft with application to a supercell storm: Video supplement to NASA Technical Paper 3230 – 353

SPRITE video news release – 352

Venus lightning – 354

TILT ROTOR AIRCRAFT

XV-15: Tiltrotor – 5

TILT ROTOR RESEARCH AIRCRAFT PROGRAM

XV-15: Tiltrotor – 5

TILTING ROTORS

XV-15: Tiltrotor – 5

TIME MEASUREMENT

Hubble Spies Huge Cluster of Stars Formed by Ancient Encounter – 382

TITAN 3 LAUNCH VEHICLE

Titan III Mars Explorer Transfer Orbital Stage Delivery to the PHSF – 402

Titan III Mars Observer Arrival and Uncrating at PHSF – 403

Titan III Mars Observer Press Showing at the PHSF – 404

TITAN III/Mars Observer Flow Tape for Playback – 404

TITAN LAUNCH VEHICLES

TITAN III/Mars Observer Post-Launch Press Conference – 35

TITAN PROJECT

TITAN III Launch Replays – 403

TITANIUM

STS-26 SSIP briefing – 337

TITAN

TITAN III Launch Replays – 403

TOPEX

TOPEX Press Conference (2 of 2) – 330

TOPEX/POSEIDON Launch from Guiana Space Center Aboard an Ariane 42P – 329

TOPOGRAPHY

Improved mapping system – 347

Magellan Science Briefing from NASA Headquarters – 402

Mars observer mission: Mapping the Martian world – 393

STS-99 / Endeavour Mission Overview – 175

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 175

STS-99 Crew Activities Report / Flight Day 06 Highlights – 166

STS-99 Crew Activities Report / Flight Day 07 Highlights – 166

STS-99 Crew Activities Report / Flight Day 08 Highlights – 167

STS-99 Crew Activities Report / Flight Day 09 Highlights – 171

STS-99 Crew Activities Report / Flight Day 11 Highlights – 166

STS-99 Crew Interviews: Gerhard P.J. Thiele – 149

STS-99 Crew Interviews: Gorie – 147

STS-99 Crew Interviews: Janice E. Voss – 149

STS-99 Crew Interviews: Kevin R. Kregel – 146

STS-99 Crew Interviews: Mamoru Mohri – 146

STS-99 Flight Day 04 Highlights and Crew Activities Report – 170

STS-99 Flight Day Highlights 03 and Crew Activities Report – 164

STS-99 Flight Day Highlights and Crew Activities Report – 163

STS-99: Post Flight Presentation – 182

STS-99 Post-Launch Press Conference – 174

STS-99 SRTM Moved from the SSPF to the OPF #2 – 172

TOPEX Press Conference (2 of 2) – 330

TOPOLOGY

Live from Antarctica, volume 4 – 353

TORQUE MOTORS

Rotating unbalanced mass proof-of-concept – 370

TORQUE

STS-38: Bolt Tightening – 196

TOTAL OZONE MAPPING SPECTROMETER

Atlas of TOMS ozone, 1978-1988 – 350

Evolution of the Southern Hemisphere ozone hole as seen by TOMS from August 1979 to December 1991 – 351

Meteor 3/TOMS launch of 15 August 1991 in Plesetsk, USSR – 31

October 1979-1989 Southern Hemisphere total ozone as seen by TOMS – 351

Southern and Northern Hemisphere total ozone as seen by TOMS – 352

TOMS computer graphics – 350

TOUCHDOWN

F-15 resource tape – 7

STS-37 Landing – 177

STS-38: Landing at Kennedy Space Center/Crew Exit – 212

STS-71/Mir/Spacelab Landing at KSC – 176

STS-93 Flight Day 5 Highlights and Crew Activities – 137

TRACKING (POSITION)

Programmable Remapper project – 367

STS-30: TGS Isolated Video Playbacks – 187

TRACKING RADAR

STS-68 mission highlights resource tape – 14

TRACKING STATIONS

Goldstone – 29

TRAINING AIRCRAFT

STS-26 STA training (Hauck) – 8

STS-99 Commander and Pilot for the SRTM Mission, Practice Flight in the Shuttle Training Aircraft – 172

TRAINING DEVICES

Expedition 1 Crew Resource Reel – 22

STS-104 Crew Training Clips – 253

STS-47 Astronaut Crew Training Clip – 235

STS-92 Crew Training – 212

STS-93 Crew Training – 155

TRAINING EVALUATION

STS-96 Discovery, Bench Review and SPACEHAB Familiarization at SPACEHAB – 161

TRAINING SIMULATORS

Richards, Dick: Training clip – 28

Space adaptation – 356

President Clinton's Arrival at CCAS and Visit to KSC for Launch of STS-95 – 161

VIKING MARS PROGRAM
First US Mars landing – 318

VINEYARDS
Assisting wine growers – 355

VIRTUAL REALITY
Expedition 7 Crew Training Clip – 30
Future of robotics – 345
STS-101 Crew Training – 179
STS-104 Crew Training Clips – 253
STS-96 Crew Training, Mission Animation, Crew Interviews, STARSHINE, Discovery Rollout and Repair of Hail Damage – 165
Telepresence media resource tape – 366
Virtual reality – 366

VISION
Enhancing sight – 370

VISUAL PERCEPTION
Enhancing sight – 370

VISUAL TASKS
Enhancing sight – 370

VOICE CONTROL
STS-41 VCS training with mission specialist Bruce Melnick and Bill Shepard – 345

VOICE OF AMERICA
STS-75 Flight Day 11 – 67

VOLCANOES
Dante's volcano – 352

VOLCANOLOGY
Galileo Science Update Europa Unveiled – 88

VORTICES
Leading-edge vortex-system details obtained on F-106B aircraft using a rotating vapor screen and surface techniques – 2

VOYAGER 1 SPACECRAFT
The 1980 highlights – 410
Voyager encounter highlights – 387
Voyager Outreach Compilation – 394

VOYAGER 2 SPACECRAFT
Neptune encounter highlights – 387
Voyager 2: Neptune encounter – 388
Voyager Briefing: Expectations of the Neptune Encounter – 398
Voyager encounter highlights – 387
Voyager encounters Uranus – 388
Voyager II Encounter with Neptune: Voyager/Neptune Briefing – 396
Voyager Outreach Compilation – 394
Voyager's last encounter – 389

VOYAGER PROJECT
And then there was Voyager – 390
NASA images 11 – 387
NASA images 12 – 388
NASA images 9 no. 3005 – 13
NASA report to education, volume 6 – 410
NASA report to education, volume 7 – 388
Voyager Briefing: Expectations of the Neptune Encounter – 398
Voyager last picture show – 390
Voyager: National Air and Space Museum – 390
Voyager Outreach Compilation – 394
Voyager science summary tape – 391

V/STOL AIRCRAFT
VSTOL Systems Research Aircraft (VSRA) Harrier – 4

WALKING MACHINES
Dante's volcano – 352

WASTE DISPOSAL
STS-35 crew trash compactor briefing – 25

WATER COLOR
Coastal zone color scanner: Nimbus 7 – 354

WATER LANDING
Apollo 13 Facts: Recovery – 21
STS-32 bailout training in WETF – 361

WATER TREATMENT
Plant research – 355

WATER VAPOR
Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 343

WATER WAVES
Ocean wave study – 355

WATER
STS-29 crew bailout in WETF – 361
STS-79 Flight Day 2 – 83

WATERWAYS
The tunnels of Samos – 368

WAVE PROPAGATION
Pressure Wave Propagation in a Screech Cycle – 95

WEATHER FORECASTING
Live from Antarctica, volume 4 – 353
STS-102 Countdown Status Briefing – 246
STS-102 Countdown Status – 245
STS-102 Prelaunch Press Conference – 245
STS-104 Countdown Status Briefing – 263
STS-104 Pre-Launch Press Conference – 262
STS-105 Countdown Status Briefing – 262
STS-105 Pre-Launch Press Conference – 262
STS-106 Countdown Status Briefing – 222
STS-53 Countdown Status Briefing – 237
STS-97 Countdown Status – 220
STS-97 Prelaunch Press Conference – 221

WEATHER STATIONS
Live from Antarctica: The coldest, windiest place on Earth – 353

WEATHER
A/C 67 Investigation Board Final Report – 375
AC-67 Press Conference – 330
STS-99 / Endeavour: Launch Postponement Press Conference – 178

STS-99 / Endeavour Pre Launch Press Conference – 175

STS-99 Countdown Status Briefing – 173

STS-99 Countdown Status Press Conference – 173

Venus lightning – 354

WEIGHTLESSNESS SIMULATION

Richards, Dick: Training clip – 28

STS-26 IUS and latch contingency training – 26

STS-30 Magellan IUS/EVA training in WETF – 358

STS-31 crew training inflight maintenance and bailout exercises in CCT and WETF – 27

STS-31 Hubble space telescope contingency training in WETF with McCandless and Sullivan – 363

STS-32 crew training for lower body negative pressure unit and AFE – 357

STS-32 LDEF EVA training in WETF with Low and Dunbar – 361

STS-33 Carter and Thorton during WETF activities – 362

STS-34 Chang-Diaz and E. Baker during Galileo contingency training in WETF – 360

STS-35 Crew training: Bailout in CCT, firefighting, TAGS class and bailout in WETF – 359

STS-35 EVA payload training in WETF – 359

WEIGHTLESSNESS

Apollo 14: Shepard hitting golf ball on Moon – 394

Go for EVA – 46

Movement in microgravity – 40

Newton in space – 369

STS-106 Crew Interviews: Boris Morukov – 194

STS-81 Flight Day 7 – 85

STS-87 Day 02 Highlights – 109

Toys in space, 2 – 45

WILD 2 COMET

Asteroids and Comets Outreach Compilation – 383

Stardust Launch Coverage – 31

WILDLIFE

KSC wildlife show – 355

WIND SHEAR

Wind shear and heavy rain – 354

WIND TUNNEL TESTS

Improved Optical Techniques for Studying Sonic and Supersonic Injection into Mach 3 Flow – 343

Rotorcraft research – 9

Spacework 16 – 371

The world's largest wind tunnel – 9

Two-dimensional scramjet inlet unstart model: Wind-tunnel blockage and actuation systems test – 342

WIND TUNNELS

Icing research tunnel – 9

Langley's 50th year – 410

Spacework 16 – 371

Telepresence media resource tape – 366

The world's largest wind tunnel – 9

Unitary plan wind tunnel landmark dedication and revitalization – 409

WINDPOWER UTILIZATION

The 1982 highlights – 409

WING CAMBER

Mission adaptive wing – 4

WING PROFILES

Mission adaptive wing – 4

WINGS

Airflow research – 2

Better airplane wings – 336

Wind Tunnel Tests of an Inflatable Airplane – 2

WORKSTATIONS

NIST Automated Manufacturing Research Facility (AMRF): March 1987 – 340

X RAY ASTRONOMY

Delta XTE Press Briefing – 17

STS-93/ Chandra Science Briefing – 167

STS-93: Columbia / Chandra Mission Overview (from JSC) – 160

STS-93: Crew Interview - Cady Coleman – 157

STS-93: Crew Interview - Steve Hawley – 157

STS-93 Crew Interview: Jeff Ashby – 154

STS-93 Mission Highlights Resource Tape – 140

XTE Science Briefing from KSCNF – 17

Yohkoh Soft X-ray Telescope – 379

X RAY ASTROPHYSICS FACILITY

Crab Pulsar – 382

STS-103 Crew Interviews: Claude Nicollier – 8

STS-93: Chandra Flight Crew During Breakfast, Suiting and Departing the O&C Building – 157

STS-93/ Chandra Science Briefing – 167

STS-93: Columbia / Chandra Mission Overview (from JSC) – 160

STS-93 Columbia, Chandra moved to Payload Canister in the VPF – 150

STS-93: Columbia, Flight Crew Training with M-113 for Chandra – 157

STS-93: Columbia/Chandra Crew Press Conference – 159

STS-93: Crew Interview - Cady Coleman – 157

STS-93: Crew Interview - Steve Hawley – 157

STS-93 Crew Interview: Jeff Ashby – 154

STS-93 Crew Interview: Michel Tognini – 155

STS-93: Crew Watch the Installation of Chandra's Solar Panel in the VPF – 156

STS-93 Mission Highlights Resource Tape – 140

STS-93 Post Flight Presentation – 138

The four great observatories – 379

TRW Video News: Chandra X-ray Observatory – 322

X RAY SOURCES

XTE Science Briefing from KSCNF – 17

X RAY SPECTRA

XTE Science Briefing from KSCNF – 17

X RAY SPECTROMETERS

STS-54 Diffuse X-Ray Spectrometer – 232

X RAY TELESCOPES

BBXRT clip: The Broad Band X-ray Telescope – 379

STS-35: Astro-1 BBXRT Problem Area – 181

XTE Science Briefing from KSCNF – 17

Yohkoh Soft X-ray Telescope – 379

X RAY TIMING EXPLORER

Delta XTE Fairing Installation at Complex 17-B CCAS – 324

Delta XTE Launch Activities and Scrub (Anomaly) at Cape Canaveral Air Station Complex 17 – 32

Delta XTE Launch Activities (Scrub #2) – 32

Delta XTE Lift and Mate at Complex 17A – 327

Delta XTE Lifted To Work Stand – 326

Delta XTE Moved from Hangar M to Complex 17 at Cape Canaveral Air Station – 323

Delta XTE Moved to Vertical at Cape Canaveral Air Station Hangar AO – 323

Delta XTE Press Briefing – 17

Delta XTE Solar Panel Deployment and Stowing – 330

Delta XTE Spacecraft Removed from Transfer Cannister at Hangar AO, CCAS – 324

XTE Payload at Hangar AO – 325

XTE Science Briefing from KSCNF – 17

XTE Solid Motor Installation at Pad 17-A, Cape Canaveral Air Station – 336

X-15 AIRCRAFT
The 1966 highlights – 408

X-29 AIRCRAFT
X-29: Experiment in flight – 5
X-29: Research aircraft – 5

X-30 VEHICLE
Shuttle to Space Station. Heart assist implant. Hubble update. X-30 mock-up – 16

X-31 AIRCRAFT
Aero-Space Plane: Flexible access to space – 320
X-31 resource tape – 6
X-31 tailless testing – 6

X-34 REUSABLE LAUNCH VEHICLE
X-34 Captive Carry & Seunghee Lee Interview – 183

X-37 VEHICLE
X-33, X-34, X-37 Press Conference (Tape 2) – 184

X-38 CREW RETURN VEHICLE
X-38 Phase 3 Drops V-132 FF#3 – 183

X-43 VEHICLE
Hyper-X Model Testing with Animation – 7
X-43 Composite Tape – 184

XV-15 AIRCRAFT
The 1979 highlights – 388
The 1982 highlights – 409
XV-15: Tiltrotor – 5

YELLOWSTONE NATIONAL PARK (ID-MT-WY)
Saving Yellowstone – 350
TOMS computer graphics – 350

ZARYA CONTROL MODULE
Crew Activity Report/Flight Day 6 Highlights – 204
International Space Station Video Progress Report – 331

STS-51G Mission Highlights Resource Tape – 141

STS-52 Astronaut Crew Activities for TCDT – 228

STS-52 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 234

STS-52 Crew Arrival for Launch – 233

STS-52 Crew Briefing – 238

STS-52 Lageos/Iris Apogee Kick Motor in SAEF-2 – 228

STS-52 Post Launch Press Conference – 228

STS-53 Countdown Status Briefing – 237

STS-53 Launch and Landing – 232

STS-53 TCDT Activities – 236

STS-53 TCDT O&C Exit – 232

STS-53 TCDT Training and Press Q&A at Pad A – 231

STS-54 Astronaut Crew Emergency Egress Training, Press Q&A, TCDT – 235

STS-54 Crew Arrival for TCDT – 232

STS-54 Diffuse X-Ray Spectrometer – 232

STS-54 IUS Removal from Canister to Test Cell at VPF – 232

STS-54 Physics of Toys – 233

STS-54 TDRS-F in Cargo Bay at Pad B – 234

STS-54 Tracking and Data Relay Satellite – 232

STS-54 Tracking Data and Relay Satellite Briefing – 236

STS-55 Columbia Rollover from OPF to VAB – 219

STS-55 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 236

STS-55 Crew Arrival – 216

STS-55 Crew Briefing, Part 1 of 2 – 222

STS-55 Crew Briefing, Part 2 of 2 – 221

STS-55 D-2 Spacelab in Cargo Bay of Columbia in OPF Highbay 2 – 230

STS-55 Downline Waste Water Tank Problem – 220

STS-55 Emergency Egress Training/Photo Opportunity at Pad A – 220

STS-55 Hydraulic Work in Aft Section of Columbia – 229

STS-55 Mission Overview, Preflight Briefing from JSC – 216

STS-55 Post Launch Press Conference – 224

STS-56 Astronaut Crew Arrival at KSC for Launch – 216

STS-56 Atlas-2/Breakfast, Suit-up, Depart O&C, Launch, On Orbit, Landing with ISOS – 215

STS-56 Atlas-2/Spartan O&C and Hangar AO – 219

STS-56 Atlas-2/TCDT Activities – 216

STS-56 Landing Replays at KSC – 220

STS-56 Launch Attempt Press Conference – 216

STS-56 Post Landing Press Conference – 224

STS-56 Post Launch Press Conference – 223

STS-56 Preflight Briefs/Mission Overview from MSFC – 216

STS-56/TCDT O&C Walkout – 219

STS-57 Landing at KSC – 231

STS-57 post flight press conference – 43

STS-58 Video Update Day 10: Crew Press Conference and View of California Fires – 231

STS-59 Crew Arrival – 236

STS-59 Endeavour Arrival and Move to MDD – 236

STS-59 Endeavour RSS Rollback, Edited for Media – 230

STS-59 Endeavour Space Radar Lab I Antenna Installed on Pallet – 231

STS-59 mission highlights resource tape – 44

STS-59 post flight presentation – 14

STS-59 Rollover to VAB – 230

STS-59 Space Radar Lab I Moved to Work Stand – 232

STS-59/SRL-1 – 43

STS-60 Discovery/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 235

STS-60 Firing Room Activities – 233

STS-60 mission highlights resource tape – 43

STS-60 Mission Update – 233

STS-60 post flight press conference – 13

STS-61 mission highlights resource tape – 44

STS-61 post flight press conference – 14

STS-62 Columbia/Breakfast, Suit-up, Depart O&C, Launch, On-Orbit, Landing – 234

STS-62 mission highlights resource tape – 43

STS-62 post flight press conference – 13

STS-63 Commander Wetherbee Explains Five Minute Window and Mir Rendezvous – 228

STS-63 mission highlights resource tape – 47

STS-65 mission highlights resource tape – 44

STS-65 post flight presentation – 14

STS-66 mission highlights resource tape – 46

STS-66 post flight presentation – 44

STS-67 mission highlights resource tape – 47

STS-67 post flight presentation – 47

STS-68 mission highlights resource tape – 14

STS-68 post flight presentation – 44

STS-69 flight day 1 highlights – 54

STS-69 flight day 10 highlights – 56

STS-69 flight day 11 highlights – 55

STS-69 flight day 2 highlights – 54

STS-69 flight day 4 highlights – 55

STS-96 FD Highlights and Crew Activities Report: Flight Day 10 – 134

STS-96 Flight Crew Press Q & A at KSCNF for TCDT – 164

STS-96 Meal - Suit Up - Depart O and C C7 Discovery Launch - On Orbit - Landing - Isos – 311

STS-96 Mission Highlights – 135

STS-96 Post Flight Presentation – 137

STS-96 Press Briefing and MODE-1 Egress Training for TCDT – 161

STS-96: SPACEHAB Double MOD into PGHM at Launch Complex 39B – 160

STS-96: SPACEHAB Double MOD/ICC Going into the Payload Bay – 160

STS-96 TCDT Crew Arrival – 165

STS-97 Countdown Status – 220

STS-97 Crew Activity Report/Flight Day 1 Highlights – 213

STS-97 Crew Activity Report/Flight Day 10 Highlights – 214

STS-97 Crew Activity Report/Flight Day 11 Highlights – 215

STS-97 Crew Activity Report/Flight Day 2 Highlights – 214

STS-97 Crew Activity Report/Flight Day 3 Highlights – 213

STS-97 Crew Activity Report/Flight Day 4 Highlights – 213

STS-97 Crew Activity Report/Flight Day 5 Highlights – 214

STS-97 Crew Activity Report/Flight Day 6 Highlights – 214

STS-97 Crew Activity Report/Flight Day 7 Highlights – 214

STS-97 Crew Activity Report/Flight Day 8 Highlights – 215

STS-97 Crew Activity Report/Flight Day 9 Highlights – 215

STS-97 Crew Interview: Carlos Noriega, MS3 – 213

STS-97 Crew Interview: Joseph Tanner, MS1 – 213

STS-97 Crew Interview: Marc Garneau, MS2 – 213

STS-97 Crew Interviews: Brent W. Jett Jr. – 212

STS-97 Crew Interviews: Michael J. Bloomfield – 212

STS-97 Crew Training – 210

STS-97 ISS Science Payloads Briefing – 221

STS-97 Mission Highlights Resource Tape – 239

STS-97 Post Flight Presentation – 228

STS-97 Prelaunch Press Conference – 221

STS-98 Crew Activity Report/Flight Day 1 Highlights – 237

STS-98 Crew Activity Report/Flight Day 10 Highlights – 238

STS-98 Crew Activity Report/Flight Day 11 Highlights – 238

STS-98 Crew Activity Report/Flight Day 2 Highlights – 238

STS-98 Crew Activity Report/Flight Day 3 Highlights – 237

STS-98 Crew Activity Report/Flight Day 4 Highlights – 238

STS-98 Crew Activity Report/Flight Day 5 Highlights – 238

STS-98 Crew Activity Report/Flight Day 6 Highlights – 240

STS-98 Crew Activity Report/Flight Day 7 Highlights – 240

STS-98 Crew Activity Report/Flight Day 8 Highlights – 239

STS-98 Crew Activity Report/Flight Day 9 Highlights – 239

STS-98 Crew Interview: Bob Curbeam – 224

STS-98 Crew Interview: Ken Cockrell – 224

STS-98 Crew Interview: Mark Polansky – 226

STS-98 Crew Interview: Marsha Ivins – 224

STS-98 Crew Interview: Tom Jones – 224

STS-98 Crew Training – 221

STS-98 Meal - Suit up - Depart O and C - Launch Atlantis On Orbit - Landing - Crew Egress – 35

STS-98 Mission Highlights Resource Tape – 247

STS-98 Post Flight Presentation – 253

STS-99 / Endeavour: Launch Postponement Press Conference – 178

STS-99 / Endeavour Mission Overview – 175

STS-99 / Endeavour Pre Launch Press Conference – 175

STS-99 / Endeavour SRTM Science Briefing and Applications from JSC – 175

STS-99 Atlantis, Shuttle Radar Topography Mission (SRTM) in the MPPF with Technicians working – 167

STS-99 CEIT at the OPF High Bay-2, Endeavour, SRTM Mission – 174

STS-99 Commander and Pilot for the SRTM Mission, Practice Flight in the Shuttle Training Aircraft – 172

STS-99 Countdown Status Briefing – 172

STS-99 Countdown Status Press Conference – 173

STS-99 Crew Activities Report / Flight Day 06 Highlights – 166

STS-99 Crew Activities Report / Flight Day 07 Highlights – 166

STS-99 Crew Activities Report / Flight Day 08 Highlights – 167

STS-99 Crew Activities Report / Flight Day 09 Highlights – 171

STS-99 Crew Activities Report / Flight Day 10 Highlights – 169

STS-99 Crew Activities Report / Flight Day 11 Highlights – 166

STS-99 Crew Activities Report/Flight Day 1 Highlights – 163

STS-99 Crew Arrival for Launch of SRTM, Endeavour – 168

STS-99 Crew Arrives for Second Launch Attempt, SRTM Mission, Endeavour – 171

STS-99 Crew departs SLF after TCDT – 168

STS-99 Crew Interviews: Gerhard P.J. Thiele – 149

STS-99 Crew Interviews: Gorie – 147

STS-99 Crew Interviews: Janet L. Kavandi – 144

STS-99 Crew Interviews: Janice E. Voss – 149

STS-99 Crew Interviews: Kevin R. Kregel – 146

STS-99 Crew Interviews: Mamoru Mohri – 146

STS-99 Crew News Conference/ESA Call Flight Day 8 – 173

STS-99 Crew News Conference – 177

STS-99 Crew Training – 156

STS-99 Crew with Press, TCDT Crew Emergency Egress Training, Walkdown Pad 39A – 171

STS-99 Flight Crew Post-Landing Press Conference – 174

STS-99 Flight Day 04 Highlights and Crew Activities Report – 170

STS-99: Flight Day 05 Highlights and Crew Activities Report – 165

STS-99 Flight Day Highlights 03 and Crew Activities Report – 164

STS-99 Flight Day Highlights and Crew Activities Report – 163

STS-99 Lift and Mate to External Tank in VAB, Endeavour, SRTM Mission – 172

STS-99 Mission Highlights Resource Tape, Part 1 of 2 – 226

STS-99 Mission Highlights Resource Tape, Part 2 of 2 – 226

STS-99 Payload Bay Door Opening at Pad 39A Endeavour – 168

STS-99 Payload Door Closure in Orbiter Processing Facility # 2, Endeavour, (SRTM) – 168

STS-99 Payload Door Closure in Orbiter Processing Facility #2 Endeavour (SRTM) – 150

STS-99: Post Flight Presentation – 182

STS-99 Post-Launch Press Conference – 174

STS-99 Prelaunch Press Briefing – 170

STS-99 Pre-Launch Press Conference – 174

STS-99 Rollout to SRTM 39A – 169

STS-99 Rollover from OPF-2 to VAB – 169

STS-99 SRTM Lift and Insert into Canister – 169

STS-99 SRTM Moved from the SSPF to the OPF #2 – 172

Student researchers – 370

Supporting life in space – 359

Taecannautics: Sharing the dream – 370

Tank Pressure Control Experiment: Thermal Phenomena in Microgravity. Tape 1 of 4 – 339
